Competency Based Training (CBT) and assessment – An introduction for trainers

Competency

Competency refers to the ability to perform particular tasks and duties to the standard of performance expected in the workplace.

Competency requires the application of specified knowledge, skills and attitudes relevant to effective participation, consistently over time and in the workplace environment.

The essential skills and knowledge are either identified separately or combined.

Knowledge identifies what a person needs to know to perform the work in an informed and effective manner.

Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Attitude describes the founding reasons behind the need for certain knowledge or why skills are performed in a specified manner.

Competency covers all aspects of workplace performance and involves:

- Performing individual tasks
- Managing a range of different tasks
- Responding to contingencies or breakdowns
- Dealing with the responsibilities of the workplace
- Working with others.

Unit of competency

Like with any training qualification or program, a range of subject topics are identified that focus on the ability in a certain work area, responsibility or function.

Each manual focuses on a specific unit of competency that applies in the hospitality workplace.

In this manual a unit of competency is identified as a 'unit'.

Each unit of competency identifies a discrete workplace requirement and includes:

- Knowledge and skills that underpin competency
- Language, literacy and numeracy
- Occupational safety and health requirements.

Each unit of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Element of competency

An element of competency describes the essential outcomes within a unit of competency.

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

In this manual elements of competency are identified as an 'element'.

Performance criteria

Performance criteria indicate the standard of performance that is required to demonstrate achievement within an element of competency. The standards reflect identified industry skill needs.

Performance criteria will be made up of certain specified skills, knowledge and attitudes.

Learning

For the purpose of this manual learning incorporates two key activities:

- Training
- Assessment.

Both of these activities will be discussed in detail in this introduction.

Today training and assessment can be delivered in a variety of ways. It may be provided to participants:

- On-the-job – in the workplace
- Off-the-job – at an educational institution or dedicated training environment
- As a combination of these two options.

No longer is it necessary for learners to be absent from the workplace for long periods of time in order to obtain recognised and accredited qualifications.

Learning approaches

This manual will identify two avenues to facilitate learning:

Competency Based Training (CBT)

This is the strategy of developing a participant's competency.

Educational institutions utilise a range of training strategies to ensure that participants are able to gain the knowledge and skills required for successful:

- Completion of the training program or qualification
- Implementation in the workplace.

The strategies selected should be chosen based on suitability and the learning styles of participants.

Competency Based Assessment (CBA)

This is the strategy of assessing competency of a participant.

Educational institutions utilise a range of assessment strategies to ensure that participants are assessed in a manner that demonstrates validity, fairness, reliability, flexibility and fairness of assessment processes.

Flexibility in learning

It is important to note that flexibility in training and assessment strategies is required to meet the needs of participants who may have learning difficulties. The strategies used will vary, taking into account the needs of individual participants with learning difficulties. However they will be applied in a manner which does not discriminate against the participant or the participant body as a whole.

Catering for participant diversity

Participants have diverse backgrounds, needs and interests. When planning training and assessment activities to cater for individual differences, trainers and assessors should:

- Consider individuals' experiences, learning styles and interests
- Develop questions and activities that are aimed at different levels of ability
- Modify the expectations for some participants
- Provide opportunities for a variety of forms of participation, such as individual, pair and small group activities
- Assess participants based on individual progress and outcomes.

The diversity among participants also provides a good reason for building up a learning community in which participants support each other's learning.

Participant centred learning

This involves taking into account structuring training and assessment that:

- *Builds on strengths* – Training environments need to demonstrate the many positive features of local participants (such as the attribution of academic success to effort, and the social nature of achievement motivation) and of their trainers (such as a strong emphasis on subject disciplines and moral responsibility). These strengths and uniqueness of local participants and trainers should be acknowledged and treasured
- *Acknowledges prior knowledge and experience* – The learning activities should be planned with participants' prior knowledge and experience in mind
- *Understands learning objectives* – Each learning activity should have clear learning objectives and participants should be informed of them at the outset. Trainers should also be clear about the purpose of assignments and explain their significance to participants
- *Teaches for understanding* – The pedagogies chosen should aim at enabling participants to act and think flexibly with what they know
- *Teaches for independent learning* – Generic skills and reflection should be nurtured through learning activities in appropriate contexts of the curriculum. Participants should be encouraged to take responsibility for their own learning

- *Enhances motivation* – Learning is most effective when participants are motivated. Various strategies should be used to arouse the interest of participants
- *Makes effective use of resources* – A variety of teaching resources can be employed as tools for learning
- *Maximises engagement* – In conducting learning activities, it is important for the minds of participants to be actively engaged
- *Aligns assessment with learning and teaching* – Feedback and assessment should be an integral part of learning and teaching
- *Caters for learner diversity* – Trainers should be aware that participants have different characteristics and strengths and try to nurture these rather than impose a standard set of expectations.

Active learning

The goal of nurturing independent learning in participants does not imply that they always have to work in isolation or solely in a classroom. On the contrary, the construction of knowledge in tourism and hospitality studies can often best be carried out in collaboration with others in the field. Sharing experiences, insights and views on issues of common concern, and working together to collect information through conducting investigative studies in the field (active learning) can contribute a lot to their eventual success.

Active learning has an important part to play in fostering a sense of community in the class. First, to operate successfully, a learning community requires an ethos of acceptance and a sense of trust among participants, and between them and their trainers. Trainers can help to foster acceptance and trust through encouragement and personal example, and by allowing participants to take risks as they explore and articulate their views, however immature these may appear to be. Participants also come to realise that their classmates (and their trainers) are partners in learning and solving.

Trainers can also encourage cooperative learning by designing appropriate group learning tasks, which include, for example, collecting background information, conducting small-scale surveys, or producing media presentations on certain issues and themes. Participants need to be reminded that, while they should work towards successful completion of the field tasks, developing positive peer relationships in the process is an important objective of all group work.

Competency Based Training (CBT)

Principle of Competency Based Training

Competency based training is aimed at developing the knowledge, skills and attitudes of participants, through a variety of training tools.

Training strategies

The aims of this curriculum are to enable participants to:

- Undertake a variety of subject courses that are relevant to industry in the current environment
- Learn current industry skills, information and trends relevant to industry
- Learn through a range of practical and theoretical approaches
- Be able to identify, explore and solve issues in a productive manner

- Be able to become confident, equipped and flexible managers of the future
- Be 'job ready' and a valuable employee in the industry upon graduation of any qualification level.

To ensure participants are able to gain the knowledge and skills required to meet competency in each unit of competency in the qualification, a range of training delivery modes are used.

Types of training

In choosing learning and teaching strategies, trainers should take into account the practical, complex and multi-disciplinary nature of the subject area, as well as their participant's prior knowledge, learning styles and abilities.

Training outcomes can be attained by utilising one or more delivery methods:

Lecture/tutorial

This is a common method of training involving transfer of information from the trainer to the participants. It is an effective approach to introduce new concepts or information to the learners and also to build upon the existing knowledge. The listener is expected to reflect on the subject and seek clarifications on the doubts.

Demonstration

Demonstration is a very effective training method that involves a trainer showing a participant how to perform a task or activity. Through a visual demonstration, trainers may also explain reasoning behind certain actions or provide supplementary information to help facilitate understanding.

Group discussions

Brainstorming in which all the members in a group express their ideas, views and opinions on a given topic. It is a free flow and exchange of knowledge among the participants and the trainer. The discussion is carried out by the group on the basis of their own experience, perceptions and values. This will facilitate acquiring new knowledge. When everybody is expected to participate in the group discussion, even the introverted persons will also get stimulated and try to articulate their feelings.

The ideas that emerge in the discussions should be noted down and presentations are to be made by the groups. Sometimes consensus needs to be arrived at on a given topic. Group discussions are to be held under the moderation of a leader guided by the trainer. Group discussion technique triggers thinking process, encourages interactions and enhances communication skills.

Role play

This is a common and very effective method of bringing into the classroom real life situations, which may not otherwise be possible. Participants are made to enact a particular role so as to give a real feel of the roles they may be called upon to play. This enables participants to understand the behaviour of others as well as their own emotions and feelings. The instructor must brief the role players on what is expected of them. The role player may either be given a ready-made script, which they can memorise and enact, or they may be required to develop their own scripts around a given situation. This technique is extremely useful in understanding creative selling techniques and human relations. It can be entertaining and energising and it helps the reserved and less literate to express their feelings.

Simulation games

When trainees need to become aware of something that they have not been conscious of, simulations can be a useful mechanism. Simulation games are a method based on "here and now" experience shared by all the participants. The games focus on the participation of the trainees and their willingness to share their ideas with others. A "near real life" situation is created providing an opportunity to which they apply themselves by adopting certain behaviour. They then experience the impact of their behaviour on the situation. It is carried out to generate responses and reactions based on the real feelings of the participants, which are subsequently analysed by the trainer.

While use of simulation games can result in very effective learning, it needs considerable trainer competence to analyse the situations.

Individual /group exercises

Exercises are often introduced to find out how much the participant has assimilated. This method involves imparting instructions to participants on a particular subject through use of written exercises. In the group exercises, the entire class is divided into small groups, and members are asked to collaborate to arrive at a consensus or solution to a problem.

Case study

This is a training method that enables the trainer and the participant to experience a real life situation. It may be on account of events in the past or situations in the present, in which there may be one or more problems to be solved and decisions to be taken. The basic objective of a case study is to help participants diagnose, analyse and/or solve a particular problem and to make them internalise the critical inputs delivered in the training. Questions are generally given at the end of the case study to direct the participants and to stimulate their thinking towards possible solutions. Studies may be presented in written or verbal form.

Field visit

This involves a carefully planned visit or tour to a place of learning or interest. The idea is to give first-hand knowledge by personal observation of field situations, and to relate theory with practice. The emphasis is on observing, exploring, asking questions and understanding. The trainer should remember to brief the participants about what they should observe and about the customs and norms that need to be respected.

Group presentation

The participants are asked to work in groups and produce the results and findings of their group work to the members of another sub-group. By this method participants get a good picture of each other's views and perceptions on the topic and they are able to compare them with their own point of view. The pooling and sharing of findings enriches the discussion and learning process.

Practice sessions

This method is of paramount importance for skills training. Participants are provided with an opportunity to practice in a controlled situation what they have learnt. It could be real life or through a make-believe situation.

Games

This is a group process and includes those methods that involve usually fun-based activity, aimed at conveying feelings and experiences, which are everyday in nature, and applying them within the game being played. A game has set rules and regulations, and may or may not include a competitive element. After the game is played, it is essential that the participants be debriefed and their lessons and experiences consolidated by the trainer.

Research

Trainers may require learners to undertake research activities, including online research, to gather information or further understanding about a specific subject area.

Competency Based Assessment (CBA)**Principle of Competency Based Assessment**

Competency based assessment is aimed at compiling a list of evidence that shows that a person is competent in a particular unit of competency.

Competencies are gained through a multitude of ways including:

- Training and development programs
- Formal education
- Life experience
- Apprenticeships
- On-the-job experience
- Self-help programs.

All of these together contribute to job competence in a person. Ultimately, assessors and participants work together, through the 'collection of evidence' in determining overall competence.

This evidence can be collected:

- Using different formats
- Using different people
- Collected over a period of time.

The assessor, who is ideally someone with considerable experience in the area being assessed, reviews the evidence and verifies the person as being competent or not.

Flexibility in assessment

Whilst allocated assessment tools have been identified for this subject, all attempts are made to determine competency and suitable alternate assessment tools may be used, according to the requirements of the participant.

The assessment needs to be equitable for all participants, taking into account their cultural and linguistic needs.

Competency must be proven regardless of:

- Language
- Delivery Method
- Assessment Method.

Assessment objectives

The assessment tools used for subjects are designed to determine competency against the 'elements of competency' and their associated 'performance criteria'.

The assessment tools are used to identify sufficient:

- a) Knowledge, including underpinning knowledge
- b) Skills
- c) Attitudes

Assessment tools are activities that trainees are required to undertake to prove participant competency in this subject.

All assessments must be completed satisfactorily for participants to obtain competence in this subject. There are no exceptions to this requirement, however, it is possible that in some cases several assessment items may be combined and assessed together.

Types of assessment

Allocated Assessment Tools

There are a number of assessment tools that are used to determine competency in this subject:

- Work projects
- Written questions
- Oral questions
- Third Party Report
- Observation Checklist.

Instructions on how assessors should conduct these assessment methods are explained in the Assessment Manuals.

Alternative assessment tools

Whilst this subject has identified assessment tools, as indicated above, this does not restrict the assessor from using different assessment methods to measure the competency of a participant.

Evidence is simply proof that the assessor gathers to show participants can actually do what they are required to do.

Whilst there is a distinct requirement for participants to demonstrate competency, there are many and diverse sources of evidence available to the assessor.

Ongoing performance at work, as verified by a supervisor or physical evidence, can count towards assessment. Additionally, the assessor can talk to customers or work colleagues to gather evidence about performance.

A range of assessment methods to assess competency include:

- Practical demonstrations
- Practical demonstrations in simulated work conditions
- Problem solving
- Portfolios of evidence
- Critical incident reports
- Journals
- Oral presentations
- Interviews
- Videos
- Visuals: slides, audio tapes
- Case studies
- Log books
- Projects
- Role plays
- Group projects
- Group discussions
- Examinations.

Recognition of Prior Learning

Recognition of Prior Learning is the process that gives current industry professionals who do not have a formal qualification, the opportunity to benchmark their extensive skills and experience against the standards set out in each unit of competency/subject.

Also known as a Skills Recognition Audit (SRA), this process is a learning and assessment pathway which encompasses:

- Recognition of Current Competencies (RCC)
- Skills auditing
- Gap analysis and training
- Credit transfer.

Assessing competency

As mentioned, assessment is the process of identifying a participant's current knowledge, skills and attitudes sets against all elements of competency within a unit of competency. Traditionally in education, grades or marks were given to participants, dependent on how many questions the participant successfully answered in an assessment tool.

Competency based assessment does not award grades, but simply identifies if the participant has the knowledge, skills and attitudes to undertake the required task to the specified standard.

Therefore, when assessing competency, an assessor has two possible results that can be awarded:

- Pass Competent (PC)
- Not Yet Competent (NYC).

Pass Competent (PC)

If the participant is able to successfully answer or demonstrate what is required, to the expected standards of the performance criteria, they will be deemed as 'Pass Competent' (PC).

The assessor will award a 'Pass Competent' (PC) if they feel the participant has the necessary knowledge, skills and attitudes in all assessment tasks for a unit.

Not Yet Competent' (NYC)

If the participant is unable to answer or demonstrate competency to the desired standard, they will be deemed to be 'Not Yet Competent' (NYC).

This does not mean the participant will need to complete all the assessment tasks again. The focus will be on the specific assessment tasks that were not performed to the expected standards.

The participant may be required to:

- a) Undertake further training or instruction
- b) Undertake the assessment task again until they are deemed to be 'Pass Competent'.

Competency standard

UNIT TITLE: MONITOR AND MAINTAIN A BUSINESS COMPUTER SYSTEM		NOMINAL HOURS: 50
UNIT NUMBER: D1.HGE.CL7.05 D1.HML.CL10.04 D1.HRM.CL9.13 D2.TRM.CL9.15		
UNIT DESCRIPTOR: This unit deals with the skills and knowledge required to monitor and maintain a business computer system in a range of settings within the hotel and travel industries		
ELEMENTS AND PERFORMANCE CRITERIA		UNIT VARIABLE AND ASSESSMENT GUIDE
Element 1: Monitor effectiveness of computer equipment 1.1 Monitor and evaluate the effectiveness of <i>computer equipment</i> to ensure it meets enterprise needs through ongoing consultation with users 1.2 Monitor effectiveness through assessment of productivity and efficiency 1.3 Establish and implement procedures for identifying and resolving performance problems including use of <i>specialised assistance</i> 1.4 Identify computer training needs and provide training opportunities Element 2: Purchase hardware and software 2.1 Identify broad computer equipment hardware and <i>software</i> requirements accurately and research possible new approaches using appropriate <i>information sources</i> 2.2 <i>Assess the feasibility</i> of acquiring or upgrading hardware and software based on available information		Unit Variables The Unit Variables provide advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. This unit applies to monitoring and maintaining a business computer system within the labour divisions of the hotel and travel industries and may include: 1. Front Office 2. Housekeeping 3. Food and Beverage Service 4. Food Production 5. Travel Agencies 6. Tour Operation <i>Computer equipment</i> may include: • Screens • Hard drives • Printers

2.3 Evaluate options against the needs of the enterprise, including advantages and limitations 2.4 Investigate user-friendliness, system support and training issues 2.5 Seek external specialist assistance as required 2.6 Make decisions on computer acquisitions in consultation with appropriate colleagues 2.7 Plan introduction of new computer systems to take account of impacts on colleagues and customers 2.8 Ensure staff are adequately trained in using new systems 2.9 Monitor new systems for efficiency and take action accordingly	• Scanners • Back-up systems. <i>Specialised assistance</i> may include: • Internal Information Technology (IT) support • External Information Technology (IT) support • Use of commercial 'help' desks • Manufacturer. <i>Software</i> may include: • Word processing packages • Spreadsheet packages • Accounting packages • Database packages • Presentation packages • Internet browsers. <i>Information sources</i> on new technology may include: • Computer magazines and journals • Trade fairs • Computer software designers • Computer hardware manufacturers • Retail outlets • Internet • Industry associations • Seminars, workshops and training sessions • Internal/external clients.
Element 3: Maintain computer equipment and systems 3.1 Establish and monitor <i>systems for cleaning, minor maintenance and replacement of consumables</i> in accordance with manufacturer's instructions 3.2 Report faults to the nominated person or supplier for rectification 3.3 Establish and monitor procedures for ensuring security of data, including regular back-ups and virus checks 3.4 Create document filing systems and procedures to reflect the size, nature and complexity of the workplace 3.5 Set up equipment to accept the software and functions being used	

Assess the feasibility may relate to:

- Establishing benefits and consequences
- Assessing timeline for delivery and installation
- Determining maintenance required
- Assessing costs against available budget
- Assessing technology against enterprise business plans and goals.

Systems for cleaning, minor maintenance and replacement of consumables may relate to:

- Creating more space on the hard disk
- Reviewing programs
- Deleting unwanted files
- Cleaning dust from internal and external surfaces
- Backing up files before major maintenance
- Checking hard drive for errors
- Decrementing the hard disk
- Using up-to-date anti-virus programs.

Assessment Guide

The following skills and knowledge must be assessed as part of this unit:

- Ability to identify sources of information and advice on computer systems relevant to the industry sector
- Ability to use current technology options as appropriate to industry sector, including both hardware and software and their general features and capabilities
- Overview of typical systems for computer security, filing, back-up and virus control
- Knowledge of typical computer maintenance procedures conducted by operational staff as opposed to computer specialists
- Knowledge of key factors in achieving productivity and efficiency from computer systems, including ability to ensure effective monitoring, reporting of faults and regular maintenance.

	Linkages To Other Units • Use common business tools and technology • Manage physical assets and infrastructure • Establish and maintain a business relationship • Manage and implement small projects • Access and retrieve computer based data. Critical Aspects of Assessment Evidence of the following is essential: • Demonstration of current knowledge of the broad technological environment in which the enterprise operates and of the various options for computer technology in different industry sectors • Knowledge of and ability to use typical systems and procedures for the maintenance of computer systems • Demonstrated ability to review current computer technology and develop proposals for upgrading of equipment and software • Demonstrated ability to evaluate computerised filing systems, back-up or virus procedures • Knowledge, understanding and skill in producing documents, reports and worksheets on a computer. Context of Assessment This unit may be assessed on or off the job: • Assessment should include practical demonstration of the completion or project or work activities that required the candidate to monitor current technology and evaluate new technology for a specific business purpose • Assessment must relate to the individual's work area, job role and area of responsibility • Assessment must include project or work activities that allow the candidate to respond to multiple and varying workplace situations and demonstrate an ability to maintain a business computer system.
--	--

Resource Implications

Training and assessment to include access to a variety of computerised systems appropriate to the industry sector or enterprise in a real or simulated workplace; and access to workplace standards, procedures, policies, guidelines, tools, computer equipment and relevant software.

Assessment Methods

The following methods may be used to assess competency for this unit:

- Case studies
- Observation of practical candidate performance
- Oral and written questions
- Portfolio evidence
- Problem solving
- Third party reports completed by a supervisor
- Project and assignment work.

	Key Competencies in this Unit <i>Level 1 = competence to undertake tasks effectively</i> <i>Level 2 = competence to manage tasks</i> <i>Level 3 = competence to use concepts for evaluating</i>		
	Key Competencies	Level	Examples
	Collecting, organising and analysing information	2	Review and analyse literature on different computer systems or software
	Communicating ideas and information	2	Demonstrate how to perform basic computer maintenance to team members
	Planning and organising activities	3	Organise work flow to facilitate the smooth introduction of new computer equipment
	Working with others and in teams	2	Identify computer training needs and provide appropriate support to team members
	Using mathematical ideas and techniques	0	
	Solving problems	1	Identify technology to solve administrative problems
	Using technology	2	Ensure optimum computer performance by utilising computer system software, e.g. PC Tools.

Slide

Subject elements

This unit comprises three elements:

- Monitor effectiveness of computer equipment
- Purchase hardware and software
- Maintain computer equipment and systems

Slide 2

Slide No	Trainer Notes
2.	Trainer advises this Unit comprises three Elements, as listed on the slide explaining: • Each Element comprises a number of Performance Criteria which will be identified throughout the class and explained in detail • Trainees can obtain more detail from their Trainee Manual • At times the course presents advice and information about various protocols but where their workplace requirements differ to what is presented, the workplace practices and standards, as well as policies and procedures must be observed.

Slide

Assessment

Assessment for this unit may include:

- Oral questions
- Written questions
- Work projects
- Workplace observation of practical skills
- Practical exercises
- Formal report from supervisor

Slide 3

Slide No	Trainer Notes
3.	Trainer advises that assessment for this Unit may take several forms all of which are aimed at verifying they have achieved competency for the Unit as required. Trainer indicates the methods of assessment that will be applied to them for this Unit.

Element 1:

Monitor effectiveness of computer equipment

Slide 4

Slide No	Trainer Notes
4.	Introduce topic. Class Activity – General Discussion Ask general questions: • What does effectiveness mean? • What do you want to monitor? • How can you monitor it?

Slide

Monitor effectiveness of computer equipment

Performance Criteria for this Element are:

- Monitor and evaluate the effectiveness of computer equipment to ensure it meets enterprise needs through ongoing consultation with users
- Monitor effectiveness through assessment of productivity and efficiency
- Establish and implement procedures for identifying and resolving performance problems including use of specialised assistance
- Identify computer training needs and provide training opportunities

Slide 5

Slide No	Trainer Notes
5.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Business computer system

Importance of a business computer system

A business computer system is one of the fundamental tools that tourism personnel use to provide services to customers.

- What is included in a computer system?
- What is a computer system used for?
- Why is it an important business tool?

Slide 6

- Monitors
- Keyboards
- Mouse
- Scanners
- Printers
- Multifunction devices (MFDs)
- Back-up systems

Slide 8

Slide No	Trainer Notes
8.	Discussion • Briefly discuss each element as they will be explained in more detail in Section 2.1.

Slide

Business computer system

Key expectations of a business computer system

- Capable of performing the tasks you need to run a tourism organisation
- Affordable
- Well built
- Reliable
- Simple to use and maintain
- Easy to upgrade

COMPLETE ACTIVITY 1

Slide 9

Slide No	Trainer Notes
9.	Discussion & Complete Activity • What other expectations would you have? • Rely on past experiences when buying personal computers or working in an office environment • Complete Activity 1.

Slide

Identify computer system needs

Understand business strategies and requirements

The use and purchase of computer assets are important activities in any business.

Before an organisation purchases an expensive computer system it is important to understand:

- What are the strategies of the organisation going forward?
- What are the current and future business computer requirements?

Slide 10

Slide No	Trainer Notes
10.	Discussion • How can you find out about future strategies and computer requirements? • What factors need to be taken into consideration?

Slide

Identify computer system needs

Develop business computer system research questions

When identifying the needs of a computer system is it wise to create a list of questions that will guide the research process.

- What research questions would you develop?

COMPLETE ACTIVITIES 2&3

Slide 11

Slide No	Trainer Notes
11.	Discussion & Complete Activities - Discuss the question in the slide - Refer to TM Page 14 for suggestions - Complete Activities 2 & 3.

Slide

Identify computer system needs

Involving stakeholders in determining business computer system asset needs

For managers it is important to identify:

- Who the relevant stakeholders may be
- Why their input is important
- How such contributions may be obtained

Slide 12

Slide No	Trainer Notes
12.	Discussion Which stakeholders may be involved?

Slide

Identify computer system needs

Involving stakeholders in determining business computer system asset needs

- Owners of the business
- Managers
- Supervisors
- Staff, teams and workgroups
- Customers
- Suppliers
- IT consultants

Slide 13

Slide No	Trainer Notes
13.	Discussion • Why are each of these stakeholders selected? • What input can they provide?

Slide

Identify computer system needs

Involving stakeholders in determining business computer system asset needs

Their input can help clarify:

- The structure of the business computer system to meet the desired technical needs
- Identification of all pieces of hardware and software assets required
- Quantities to be obtained
- Timelines that apply to acquisition
- Brands, models and types to be considered
- Restrictions that apply

Slide 14

Slide No	Trainer Notes
----------	---------------

14.	Discussion • Discuss the importance of these types of input.
-----	--

Slide

Identify computer system needs

Involving stakeholders in determining business computer system asset needs

Their input can help clarify:

- The needs of users
- Customer needs
- Introduction and installation
- Training required
- Financing arrangements

COMPLETE ACTIVITY 4

Slide 15

Slide No	Trainer Notes
15.	Discussion & Complete Activity • Discuss the importance of these types of input • Complete Activity 4.

Slide

Monitor effectiveness of current computer system

Importance of monitoring current computer system

Many assets purchased by a business, including computer system assets will need to have their performance monitored.

Monitoring performance allows more informed decisions to be made about:

- Effectiveness of current asset items
- Guide future purchasing decisions

Slide 16

Slide No

Trainer Notes

16.

Discussion

- How can you monitor?

Slide

Computer system asset management

Computer system asset management activities

- Planning for assets
- Creating or acquiring new assets
- Accounting for assets and determining the actual cost of the services they provide
- Operating and maintaining assets
- Monitoring performance and condition of assets

Slide 17

Slide No	Trainer Notes
17.	Discussion • Why are these activities important? • What tasks are associated with each of these activities?

Slide

Computer system asset management

Computer system asset management activities

- Assessing refurbishment, renewal and replacement options
- Disposing of assets that are no longer required
- Auditing the way in which assets are managed and the asset management practices and procedures
- Identifying and working to minimise life cycle costs of new assets

Slide 18

Slide No	Trainer Notes
----------	---------------

18.	
-----	--

Discussion

- Why are these activities important?
- What tasks are associated with each of these activities?

Slide

Computer system asset management

Aspects of computer system asset management

The performance of the asset is evaluated against the level of service provided to the customer.

This can generally be measured in terms of:

- Reliability
- Availability
- Capacity
- Meeting customer demands and needs

Slide 19

Slide No	Trainer Notes
19.	Discussion What would be measured and managed for each of these aspects?

Slide

Computer system asset management

Systems to monitor condition and performance of business computer system

- Integration of reporting into day to day operating procedures
- Regular management reports
- Internal and external inspections and audits
- Regular staff feedback
- Analysis of maintenance costs over a period of time

COMPLETE ACTIVITY 5

Slide 20

Slide No	Trainer Notes
20.	Discussion & Complete Activity • What other methods of measurement could be used? • Complete Activity 5.

Slide

Element 2: Purchase hardware and software

Slide 21

Slide No	Trainer Notes
----------	---------------

21.	
-----	--

	Introduce topic.
--	------------------

	Class Activity – General Discussion
--	--

	Ask general questions:
--	------------------------

- | | |
|--|--|
| | <ul style="list-style-type: none">• What is hardware?• What is software?• What are examples of each? |
|--|--|

Slide

Purchase hardware and software

Performance Criteria for this Element are:

- Identify broad computer equipment hardware and software requirements accurately and research possible new approaches using appropriate information sources
- Assess the feasibility of acquiring or upgrading hardware and software based on available information
- Evaluate options against the needs of the enterprise, including advantages and limitations
- Investigate user-friendliness, system support and training issues

Slide 22

Slide No	Trainer Notes
22.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Purchase hardware and software

Performance Criteria for this Element are:

- Seek external specialist assistance as required
- Make decisions on computer acquisitions in consultation with appropriate colleagues
- Plan introduction of new computer systems to take account of impacts on colleagues and customers
- Ensure staff are adequately trained in using new systems
- Monitor new systems for efficiency and take action accordingly

Slide 23

Slide No	Trainer Notes
23.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Understand computer system assets

Understand types of computer system assets

One of the most important tasks in deciding on the purchase of a business computer system is to understand the different types of assets that make up a system.

What are examples of:

- Hardware
- Software

Slide 24

Slide No	Trainer Notes
24.	Discussion • Discuss the questions in the slide • This is a refresher from assets mentioned in Section 1.1.

Slide

Understand computer system assets

Sources of computer system information

- Computer magazines and journals
- Trade fairs
- Computer software designers
- Computer hardware manufacturers
- Retail outlets
- Internet
- Industry associations
- Seminars, workshops and training sessions
- Internal/external clients

Slide 25

Slide No	Trainer Notes
25.	Discussion • What are examples of these sources in your local area?

Slide

Setting up a computer system/network

Setting up a computer system/network

Setting up a computer network is a good way to get more out of your system and its assets.

Networking allows personnel to manage all of the operations of a small business including communication, data transfer, and storage.

- What is the difference between a computer system and a network?
- What assets are required to set up both?

Slide 26

Slide No	Trainer Notes
----------	---------------

26.

Discussion

- Discuss the questions in the slide.

Slide

Internet connectivity

Internet service provider (ISP)

Common types of internet service:

- Dial-up
- DSL
- 3G and 4G

Slide 27

Slide No	Trainer Notes
----------	---------------

27.

Discussion

- Discuss the differences between these types of internet services.

Slide

Internet connectivity

Internet service provider (ISP)

Considerations when selecting an ISP include:

- Speed
- Price
- Ease of installation
- Service record
- Technical support
- Contract terms

Slide 28

Slide No	Trainer Notes
----------	---------------

28.

Discussion

- What are the different options available for each of these points?

Slide

Internet connectivity

Modem

The primary piece of hardware needed to connect to the internet is a modem.

The type of Internet access selected will determine the type of modem an organisation will need including:

- Dial-up access uses a telephone modem
- DSL service uses a DSL modem

Slide 29

Slide No	Trainer Notes
29.	Discussion • What are different options available for this computer asset? • What is the difference between the options?

Slide

Internet connectivity

Router

- A router is a hardware device that allows a tourism establishment to connect several computers and other devices to a single Internet connection
- Many modems now include a built-in router

Slide 30

Slide No	Trainer Notes
----------	---------------

30.

Discussion

- What are different options available for this computer asset?
- What is the difference between the options?

Slide

Internet connectivity

Network card

- A network card is a piece of hardware that allows computers to communicate over a computer network
- The network card will have an Ethernet port, a wireless connection, or both

Slide 31

Slide No	Trainer Notes
----------	---------------

31.

Discussion

- What are different options available for this computer asset?
- What is the difference between the options?

Slide

Internet connectivity

Servers

- A computer that has been optimised to provide services to other computers over a network
- Servers usually have powerful processors, lots of memory and large hard drives

Slide 32

Slide No	Trainer Notes
----------	---------------

32.

Discussion

- What are different options available for this computer asset?
- What is the difference between the options?

Slide

Wired and wireless networks

Wired and Wireless Networks

The first decision you will need to make about your new computer system network is whether you would like it to be wired or completely wireless.

In many cases both options are used:

- Desktop - connected to the Internet with an Ethernet cable
- Laptop computer - connected via a wireless router

Slide 33

Slide No	Trainer Notes
33.	Discussion • What are the advantages of both wired and non-wired set-ups?

Slide

Networking

Local area network (LAN)

- A local area network (LAN) supplies networking capability to a group of computers in close proximity to each other
- A LAN is useful for sharing resources like files, printers, games or other applications

Slide 34

Slide No

Trainer Notes

34.

Discussion

- What is the benefit of establishing a LAN?
- How can you do it?

Slide

Networking

Local area network (LAN)

Each of these local networks may:

- Stand alone disconnected from any other network
- May connect to other LANs
- Connected to a WAN (wide area networks) - which reach across cities and other countries

Slide 35

Slide No	Trainer Notes
----------	---------------

35.

Discussion

- What is the benefit of establishing a LAN?
- How can you do it?

Slide

Networking

Network Setup

The next step in how to set up a small business computer network is deciding whether to make it a peer-to-peer setup or a client-server one.

Both networks connect computers so that resources can be shared between them.

- Peer-To-Peer Setup
- Client-Server Setup

Slide 36

Slide No	Trainer Notes
36.	Discussion What is the difference between the two set ups? Peer-To-Peer Setup In a peer-to-peer setup, every computer acts as both the client and the server. Client-Server Setup In a client-server setup, multiple clients (computers) connect to a single, central server.

Slide

Networking

Setting up a secure network

Once you have decided upon the type of network, it is important that it is protected.

You can secure a network a number of ways, including through:

- The router - through the use of security settings
- The operating system

Wireless encryption protocol (WEP) uses passwords to encrypt the network traffic.

Slide 37

Slide No	Trainer Notes
----------	---------------

37.

Discussion

- Describe the concept of WEP.

Slide

Personal computers

Personal Computers (PC's)

Personal computers are an essential part of any business computer system.

The personal computer (PC) defines a computer designed for general use by a single person.

The two main operating systems used for PC's include:

- Windows
- Mac

Slide 38

Slide No	Trainer Notes
----------	---------------

38.

Discussion

- What are different options available for this computer asset?
- What is the difference between the options?

Slide

Personal computers

Types of personal computers

- Desktops
- Laptops
- Netbooks
- Tablet computers
- Thin clients

Slide 39

Slide No	Trainer Notes
----------	---------------

39.

Discussion

- What are the differences between these PC's?

Slide

Personal computers

Key features of a personal computer

- Processor
- Graphics card
- Hard disk
- Operating system
- RAM

Slide 40

Slide No

Trainer Notes

40.

Discussion

- Explain the different features including their purpose and functions.

Slide

Monitors

Types of computer monitors

- LCD (liquid crystal display) monitors
- LED (light-emitting diodes) monitors

Considerations when purchasing monitors

- Size
- Resolution

Slide 41

Slide No	Trainer Notes
----------	---------------

41.

Discussion

- What are different options available for this computer asset?
- What is the difference between the options?

Slide

Keyboards

Keyboards

Keyboards are available in a wide array of options, with some suitable for use only with nominated or 'supported' software.

- Wireless capacity
- Ergonomic design
- Customisable hot keys
- Single touch pad
- Keyboard scrolling wheel
- USB ports

Slide 42

Slide No	Trainer Notes
----------	---------------

42.

Discussion

- What are different options available for this computer asset?
- What is the difference between the options?

Slide

Mouse

Mouse

- Wireless option
- Extra buttons
- Wheel scrolling for accelerated page scrolling
- Left-hand and right-hand design

Slide 43

Slide No	Trainer Notes
----------	---------------

43.

Discussion

- What are different options available for this computer asset?
- What is the difference between the options?

Slide

Multifunction devices (MFDs)

Multifunction devices (MFDs)

MFDs are pieces of equipment where a number of items are combined into the one piece of equipment.

The common functions are performed using MFD's include:

- Print
- Copy
- Scan
- Fax

Slide 44

Slide No	Trainer Notes
----------	---------------

44.

Discussion

- What are different options available for this computer asset?
- What is the difference between the options?

Slide

Computer back-up systems

Back up system considerations

When choosing a backup system there are a number of considerations including:

- Amount of data you have
- Amount of computers
- Amount of hands-on involvement required
- Backup speed
- Sensitivity of your data
- Your level of computer expertise
- Physical size of the drive

Slide 45

Slide No	Trainer Notes
45.	Discussion • What are different options available for this computer asset? • What is the difference between the options?

Slide

Computer back-up systems

Types of back-up drives

Backup solutions include:

- Internal drives
- External drives
- Network drives
- Online services
- Thumb drives
- CD or DVD backups

COMPLETE ACTIVITY 6

Slide 46

Slide No	Trainer Notes
46.	Discussion & Complete Activity • What is the difference between these back-up systems? • Complete Activity 6.

Slide

Software

Definition of software

General term for the various kinds of programs used to operate computers and related devices

- What are examples of software used in business?

Slide 47

Slide No	Trainer Notes
47.	Discussion Discuss the question in the slide.

Slide

Software

Software functions

Popular software functions include:

- Word processing
- Spreadsheets
- Databases
- Communication
- Presentation
- Sharing
- Internet browsers
- Accounting software
- Groupware and collaboration

Slide 48

Slide No

Trainer Notes

48.

Discussion

- Describe the Microsoft Office software packages
- What other integrated packages exist?

Slide

Tourism computer systems

Tourism systems

Commonly used industry-wide systems used by travel organisations include:

- Global distribution system (GDS)
- Computerised or centralised reservations system (CRS)

Slide 49

Slide No	Trainer Notes
49.	Discussion • What is the difference between these systems?

Slide

Tourism computer systems

Global Distribution System (GDS)

The Global Distribution System (GDS) is an e-commerce tool introduced by airlines to facilitate the booking of flights.

There are four major Global Distribution Systems:

- Amadeus
- Galileo
- Sabre
- Worldspan

Slide 50

Slide No	Trainer Notes
50.	Discussion Discuss the use and benefits of a GDS.

Slide

Tourism computer systems

Computerised reservation systems (CRS)

There are many computerised reservation systems (CRS) in use today and while they all provide similar functions, menus, sub-menus, options, reports, statistics and accounting facilities the individual programs are all unique.

- What are examples of CRS's?
- What is their purpose?
- How do they benefit a tourism organisation?

COMPLETE ACTIVITY 7

Slide 51

Slide No	Trainer Notes
51.	Discussion & Complete Activity • Discuss the questions in the slide • Complete Activity 7.

Slide

Assess computer system purchase options

Conducting research into suitable computer system options

- Now that we have identified the types of computer assets and possible quantities required it is now time to undertake procurement
- As part of the procurement process a feasibility study will be conducted to identify, research, evaluate and select the best computer assets to meet your requirements

Slide 52

Slide No	Trainer Notes
52.	Discussion • What is procurement? • What is feasibility?

Slide

Assess computer system purchase options

Procurement

Procurement is the process of sourcing and purchasing computer system assets.

- What are considerations when purchasing computer system assets?

Slide 53

Slide No	Trainer Notes
----------	---------------

53.

Discussion

- Discuss the question in the slide
- Refer to TM page 49 for suggestions.

Slide

Assess computer system purchase options

Computer system asset purchasing considerations

- Cost
- Availability
- Warranties and after-sales service
- Lead times
- Service centre locations
- Interruptions related to servicing
- Parts and replacement policies

Slide 54

Slide No	Trainer Notes
54.	Discussion • Discuss these considerations.

Slide

Assess computer system purchase options

Computer system asset purchasing considerations

- Product quality
- Reliability, suitability of use and durability
- Continuity of supply
- Terms of trade
- Rebates and discounts
- Staff training provided by suppliers
- Incentives to purchase

Slide 55

Slide No	Trainer Notes
55.	Discussion • Discuss these considerations • What other considerations would you have?

Slide

Assess computer system purchase options

Definition of feasibility

Feasibility is based around objectively and rationally researching and understanding the strengths and weaknesses of various options to make an informed and calculated decision.

- What are feasibility activities?

Slide 56

Slide No	Trainer Notes
56.	Discussion • Discuss the question in the slide.

Slide

Assess computer system purchase options

Feasibility activities

Assess the feasibility may relate to:

- Identify the best method of acquiring required components
- Identifying advantages and disadvantages of each acquisition method
- Researching the different options that exist for the desired computer asset
- Assessing costs against available budget

Slide 57

Slide No	Trainer Notes
57.	Discussion • What tasks are associated with these activities?

Slide

Assess computer system purchase options

Methods to acquire computer system assets

- Off-the-shelf products
- Custom built
- Used equipment

COMPLETE ACTIVITIES 8&9

Slide 58

Slide No	Trainer Notes
58.	Discussion & Complete Activities • What are the advantages and disadvantages of each method? • Complete Activities 8 & 9.

Slide

Assess computer system purchase options

Conduct research into required computer systems assets

The whole purpose of the this process is to gather current, accurate and relevant data used for:

- Identifying the most suitable asset
- Estimating costs for the asset
- Understanding support services and warranties etc

Slide 59

Slide No	Trainer Notes
59.	Discussion • What are the activities associated with conducting research?

Slide

Assess computer system purchase options

The tender process

- Collect tender information
- Evaluation of tender information
- Rating essential and negotiable requirements
- Identify criteria used to evaluate delivery response times by supplier

COMPLETE ACTIVITIES 10&11

Slide 60

Slide No	Trainer Notes
60.	Discussion & Complete Activities • What tasks are associated with each of these tender activities? • Refer to TM Pages 54&55 • Complete Activities 10&11.

Slide

Key purchasing priorities

Identify key non-finance purchasing priorities

Following are examples of key purchasing priorities that will guide the non-financial decision making process.

- Ease of use of the asset
- Ease of integration into the existing workplace
- Reliability of the item
- Safety
- Compliance

Slide 61

Slide No	Trainer Notes
61.	Discussion • Discuss these priorities.

Slide

Key purchasing priorities

Identify key non-finance purchasing priorities

- Asset achieves or exceeds the results/outcomes expected of it
- Resale value
- Enhanced service levels
- Support services
- Training requirements and training provided by suppliers

COMPLETE ACTIVITY 12

Slide 62

Slide No	Trainer Notes
62.	Discussion & Complete Activity • Discuss these priorities • What other non-financial purchasing priorities would you have? • Complete Activity 12.

Slide

Computer support services

Importance of computer hardware and software support services

- Why are these services important?
- What types of services and support are available?

Slide 63

Slide No	Trainer Notes
----------	---------------

63.

Discussion

- Discuss the questions in the slide.

Slide

Computer support services

Types of support services

- On-line help
- Manuals and training booklets
- Training

COMPLETE ACTIVITY 13

Slide 64

Slide No	Trainer Notes
64.	Discussion & Complete Activity • Discuss the types of support services mentioned in the slide • What other support services are available in your region? • Complete Activity 13.

Slide

Seek external specialist assistance

Importance of external assistance

- Naturally the planning, design and implementation of computer systems is a complex initiative
- No one manager will have the necessary skills and knowledge to undertake this exercise by themselves
- They will require the assistance of various specialists for a variety of reasons

Slide 65

Slide No	Trainer Notes
65.	Discussion • What options are available? • What assistance can they provide?

Slide

Seek external specialist assistance

Types of general assistance

- Your accountant
- Your auditor
- Owners of the business
- Managers
- Supervisors
- Staff, teams and workgroups
- Customers
- Suppliers
- IT consultants

Slide 66

Slide No	Trainer Notes
----------	---------------

66.	Discussion • What assistance can the above people provide?
-----	---

Slide

IT specialist services

Network design and installation

- Initial strategic planning
- Applications development
- Systems integration
- Expand and improving existing computer systems
- Design and install all sizes of networks
- Ensure connectivity
- Make recommendations on all aspects of computing
- IT upgrade, installation or migration

Slide 67

Slide No	Trainer Notes
67.	Discussion • Discuss these specialist services.

Slide

IT specialist services

IT Consultancy

- Remote, onsite and 24/7 services
- Remote working away from the office with a virtual desktop
- Mobile working for emails on the move
- Email security, anti-virus, anti-SPAM solution
- Secure offsite backup of data
- Bespoke Software Application Development
- Website and eBusiness design

Slide 68

Slide No	Trainer Notes
68.	Discussion • Discuss these specialist services.

Slide

IT specialist services

Software Application Development

- Initial requirements definition
- Architecture design
- Application selection and integration
- Development and deployment
- Customisation and integration of third-party software
- Design and development of content management systems for corporate intranets and extranets
- Internationalisation and localisation of Web applications

COMPLETE ACTIVITY 14

Slide 69

Slide No	Trainer Notes
69.	Discussion & Complete Activity • Discuss these specialist services • Complete Activity 14.

Slide

Make computer acquisition decision

Consider budget requirements

- Naturally the greatest influence in purchasing computer assets will be the budget
- The computer assets that a business can obtain are often limited by the budget available for purchasing items
- Management will determine the level of funding available for computer system assets and make an amount available through its budgets

COMPLETE ACTIVITY 15

Slide 70

Slide No	Trainer Notes
70.	Discussion & Complete Activity • Why do budgets need to be considered? • How can you allocate budgets for computer systems? • Complete Activity 15.

Slide

Cost–benefit analysis

Undertake a cost–benefit analysis

An accepted way of ensuring realistic computer asset expenditure is to undertake a cost–benefit analysis in relation to the asset that is to be purchased

- What are possible costs?
- What are possible benefits?

Slide 71

Slide No	Trainer Notes
----------	---------------

71.

Discussion

- Discuss the questions in the slide.

Slide

Cost–benefit analysis

Costs

- Purchase price
- Opportunity cost
- Cost of finance
- Testing or compliance costs
- Transportation costs
- Site preparation costs

Slide 72

Slide No	Trainer Notes
72.	Discussion • What are costs associated with each of these points?

Slide

Cost–benefit analysis

Costs

- Installation costs
- Make-ready costs
- Tooling, parts and suppliers
- Spare parts costs
- Training costs
- Cost of power and consumables

Slide 73

Slide No	Trainer Notes
73.	Discussion • What are costs associated with each of these points?

Slide

Cost–benefit analysis

Costs

- Service and maintenance costs
- Insurance costs for the new item
- Cost of adapting existing systems and procedures to accommodate the new purchase
- Lost sales caused by interruption to normal business
- Reduced levels of earnings while staff learn the new item
- Depreciation

Slide 74

Slide No

Trainer Notes

74.

Discussion

- What are costs associated with each of these points?

Slide

Cost–benefit analysis

Benefits

- Higher levels of earnings/revenue Reduced levels of unsatisfactory services
- Energy savings
- Labour savings
- Savings on raw materials
- Sale value of any equipment that is being disposed
- Enhanced image or market positioning

COMPLETE ACTIVITY 16

Slide 75

Slide No	Trainer Notes
75.	Discussion & Complete Activity • What other benefits exist? • Complete Activity 16.

Slide

Methods of financing

Identify methods of financing

When purchasing computer system assets, it is important to identify the most efficient use of finances.

In summary, the different methods of financing include

- Purchasing
- Leasing
- Hiring

COMPLETE ACTIVITY 17

Slide 76

Slide No	Trainer Notes
76.	Discussion & Complete Activity • Discuss the differences, advantages, disadvantages of each financing method • Complete Activity 17.

Slide

Making the final decision

Identify necessary prerequisites prior to purchasing assets

- To know what the item is required to do
- To know the businesses with whom your organisation will deal
- Preferred method of acquisition for the business
- The terms that your business wants applied to the purchase
- Non-negotiable elements of any deal
- Necessary authority to go ahead and make the purchase

COMPLETE ACTIVITY 18

Slide 77

Slide No	Trainer Notes
77.	Discussion & Complete Activity • What other prerequisites would you have prior to purchasing assets? • Complete Activity 18.

Slide

Implement new computer assets

Prepare for implementation

Now that all computer system purchasing decisions have been made, it is now time to prepare for its implementation.

Naturally the greater the degree of change to hardware and software will have a greater impact on staff, ranging from greater anxiety to lower productivity.

- What tasks are associated with the implementation of computer system assets?

Slide 78

Slide No	Trainer Notes
----------	---------------

78.

Discussion

- Discuss the questions in the slide.

Slide

Implement new computer assets

Implementation considerations

- Identify all implementation actions to be taken
- Allocation of responsibilities for action to nominated persons
- Determination of accountability for actions taken
- Timelines for completion of nominated actions
- Compliance requirements
- Occupational safety and health (OSH)

Slide 79

Slide No	Trainer Notes
----------	---------------

79.

Discussion

- Discuss the actions associated with each of these points.

Slide

Implement new computer assets

Implementation considerations

- Arranging arrival and security of new computer assets
- Timing of new system assets to be implemented
- Saving information from old system assets
- Removal, storage and sale of old computer assets
- Arranging location and physical layout of new assets
- Unpacking and installing new computer assets
- Timing issues
- Resources

Slide 80

Slide No	Trainer Notes
----------	---------------

80.

Discussion

- Discuss the actions associated with each of these points.

Slide

Implement new computer assets

Implementation considerations

- Aligning new computer assets to existing structures, hardware and software systems
- Integration with other aspects of the business
- Adding information to new computer system assets
- Changes to policies and procedures
- Documentation & record keeping
- Impact on organisational culture
- Anticipation of problems
- Training for staff

Slide 81

Slide No	Trainer Notes
81.	Discussion • Discuss the actions associated with each of these points • What else needs to be considered?

Slide

Implement new computer assets

Communicate implementation actions

- Reasoning or purpose behind the changes to the computer system
- Identification of the key changes that are taking place
- Identification of how the new computer system will benefit them
- Start dates of implementation
- Expected completion dates
- How the implementation will be implemented

Slide 82

Slide No	Trainer Notes
----------	---------------

82.

Discussion

- What information needs to be discussed under each of these points?

Slide

Implement new computer assets

Communicate implementation actions

- Activities to be performed
- Resources required to implement the plan
- Work breakdown
- Involvement of other staff
- Roles and responsibilities of staff
- Pre-change activities

Slide 83

Slide No	Trainer Notes
83.	Discussion What information needs to be discussed under each of these points?

Slide

Implement new computer assets

Communicate implementation actions

- Timelines for implementation
- Training activities that will take place
- Support mechanisms
- Expected standard of performance
- Milestones for completion
- Budgets to work within
- Methods of communication
- Making observations and providing feedback

Slide 84

Slide No	Trainer Notes
84.	Discussion • What information needs to be discussed under each of these points?

Slide

Implement new computer assets

Communicating implementation actions

- Hold a formal staff meeting
- Explain the new computer system assets to be introduced
- Give them a hard copy of materials to help explain and use new computer system assets
- Explain the changes
- Encourage questions
- Make yourself available
- Include new policies, procedures in operational manuals and in-house training

COMPLETE ACTIVITY 19

Slide 85

Slide No	Trainer Notes
85.	Discussion & Complete Activity • What is the best form of communication? • Complete Activity 19.

Slide

Review accompanying documents

Types of documents

When computer system assets are purchased, it is usual for them to be accompanied by documents and items that must also be taken care of.

- Guarantees and warranties
- Installation instructions
- Wiring diagrams
- Manuals
- Trouble-shooting guides
- Spare parts lists
- Maintenance schedules

Slide 86

Slide No	Trainer Notes
86.	Discussion & Review documents • Review examples of these documents • What is the purpose of these documents? • Where should they be stored?

Slide

Identify potential problems

Identify predictable problems with implementation of new computer system assets

As implementation of new computer system assets takes place, things often do not go exactly to plan for a variety of reasons.

- What are predictable programs that may occur?

Slide 87

Slide No	Trainer Notes
----------	---------------

87.

Discussion

- Discuss question in the slide.

Slide

Identify potential problems

Identify predictable problems with implementation of new computer system assets

- Delays in implementation
- Frustrations with new systems
- Insufficient physical space or area
- Lack of seamless integration between old and new systems
- Greater stress as workload increases and productivity reduces
- Staff are unfamiliar with new systems
- Staff unable to perform functions on new systems
- Staff making mistakes in new system

Slide 88

Slide No	Trainer Notes
88.	Discussion ● How can you reduce the effect of these potential problems?

Slide

Identify potential problems

Identify predictable problems with implementation of new computer system assets

- Greater complaints due to delays and inaccurate information
- Lost data
- Limited access due to new security of password procedures
- Disruptions to routine
- Problems with productivity
- Extra support required by employees

COMPLETE ACTIVITY 20

Slide 89

Slide No	Trainer Notes
89.	Discussion & Complete Activity • How can you reduce the effect of these potential problems? • Complete Activity 20.

Slide

Provide implementation support

Provide support and resources to support implementation actions

As mentioned, any time change takes place, whilst in the long term it will benefit the organisation and staff involved, it will cause disruptions and make activities harder for staff in the short term.

- What types of support can you provide to staff?

Slide 90

Slide No	Trainer Notes
90.	Discussion Discuss question in the slide.

Slide

Ensure staff are trained

Ensure staff are adequately trained in using new systems

Before staff are required to use new computer systems it is vital that all staff competent in not only the functions associated with the system but also in being able to access and interpret information which is contained within.

- How can you check the current competency of staff?

Slide 91

Slide No	Trainer Notes
91.	Discussion • Discuss the question in the slide.

Slide

Ensure staff are trained

Ensure staff are adequately trained in using new systems

In essence for staff must be proficient in the use of a computer system requires two things:

- An understanding of what can be done, why it is done, and when it should be done, and
- Practice in applying that knowledge and understanding to the system

Slide 92

Slide No	Trainer Notes
92.	Discussion What training may need to be provided?

Slide

Ensure staff are trained

General computer system knowledge and skills training

- Basic computer and keyboarding skills
- Literacy skills
- Read, interpret and use system codes
- Writing skills
- Numeracy skills
- Organisation's policies, plans and procedures
- Correct log-on and shut-down procedures
- Procedures and codes required to enter and exit a system

Slide 93

Slide No	Trainer Notes
93.	Discussion • What are examples of knowledge or skills required for each of these points? • How can you train these?

Slide

Ensure staff are trained

General computer system knowledge and skills training

- Back-up and virus protection procedures
- Role of computer and operations systems
- Range of products and services
- Range of sales, operational and accounting functions
- Common computerised reservation and operational entries
- Mandatory fields

Slide 94

Slide No	Trainer Notes
94.	Discussion • What are examples of knowledge or skills required for each of these points? • How can you train these?

Slide

Ensure staff are trained

General computer system knowledge and skills training

- Applying access codes
- Interpreting and using on-screen prompts
- Interpreting and applying on-screen abbreviations, acronyms and options
- Using navigation tools such as buttons and tabs
- Applying correct date formats within the system
- Adhering to system protocols and field size limitations
- Completing required fields

Slide 95

Slide No	Trainer Notes
95.	Discussion • What are examples of knowledge or skills required for each of these points? • How can you train these?

Slide

Ensure staff are trained

General computer system knowledge and skills training

- Describing the field and menu links available between screens
- Responding to system-related queries
- Accepting, confirming, denying, amending or following-up bookings
- Forwarding sub-menu bookings
- Translating communications into other languages
- Converting currencies
- Integrating updates from suppliers
- Negotiating new deals

Slide 96

Slide No	Trainer Notes
96.	Discussion • What are examples of knowledge or skills required for each of these points? • How can you train these?

Slide

Ensure staff are trained

General computer system knowledge and skills training

- Adding distribution channels to the CRS network
- Generating invoices, accounts, folios and statements
- Generating and distributing relevant reports to other system users
- Requirements for specific formatted entries
- Procedures for confirming, storing and retrieving reservations or operational data

Slide 97

Slide No	Trainer Notes
97.	Discussion • What are examples of knowledge or skills required for each of these points? • How can you train these?

Slide

Ensure staff are trained

General computer system knowledge and skills training

- Procedures for sending and receiving messages
- Maintenance activities
- Technical terminology in relation to reading help-files and manuals
- Methods of detecting faults in and solving problems with technology

Slide 98

Slide No	Trainer Notes
98.	Discussion • What are examples of knowledge or skills required for each of these points? • How can you train these?

Slide

Ensure staff are trained

Specialised GDS and CRS training

- Signing on and off
- Using system passwords
- Understand online system help
- System help facilities
- Key functions
- System abbreviations
- Encoding and decoding

Slide 99

Slide No	Trainer Notes
99.	Discussion • What are examples of knowledge or skills required for each of these points? • How can you train these?

Slide

Ensure staff are trained

Specialised GDS and CRS training

- ◉ Displaying and interpreting availability screens
- ◉ Selling from availability screens and making direct sell reservations
- ◉ Identifying the various levels of selling
- ◉ Creating and updating files
- ◉ Completing the Booking File
- ◉ Using service requests to generate passenger specific requirements
- ◉ Accessing and actioning queues

Slide 100

Slide No	Trainer Notes
100.	Discussion • What are examples of knowledge or skills required for each of these points? • How can you train these?

Slide

Ensure staff are trained

Specialised GDS and CRS training

- Displaying fares, interpreting fare rules, and obtaining fare quotes
- Identifying and updating booking status codes.
- E-ticketing
- Accessing general information
- Completing documentation
- Client and Trip file management and accounting

Slide 101

Slide No	Trainer Notes
101.	Discussion • What are examples of knowledge or skills required for each of these points? • How can you train these?

Slide

Ensure staff are trained

Types of computer system training

- Participating in formal training which may be provided by the property or by the software supplier
- Utilisation of dedicated training software
- Reading the User's manual
- Observing and listening to an experienced operator
- Asking questions
- Writing your own notes
- On-going coaching and mentoring

COMPLETE ACTIVITY 21

Slide 102

Slide No	Trainer Notes
102.	Discussion & Complete Activity • What other types of training can be utilised? • Complete Activity 21.

Slide

Monitor new systems

Importance of monitoring new computer systems

The accepted ways of monitoring the effectiveness of new computer systems will relate to determining:

- Achievement of key performance indicators
- The actual workplace effectiveness of the computer asset
- The actual costs, savings or other benefits involved in using this asset

Slide 103

Slide No	Trainer Notes
103.	Discussion How can you monitor the success of new computer system assets?

Slide

Monitor new systems

Key performance indicators

Measuring the effectiveness of business computer systems can be broken down into many aspects depending on each manager and organisation, however can be broken down into the following categories:

- Satisfaction
- System usage
- Performance/ usefulness
- Productivity
- Value analysis
- Cost-benefit analysis

Slide 104

Slide No	Trainer Notes
104.	Discussion • How can you monitor the success against these KPI's?

Slide

Monitor new systems

Actual workplace effectiveness of computer asset

The activities associated with monitoring the actual workplace effectiveness of computer asset include:

- Personal observation
- Discussions with staff
- Discussions with customers
- Discussions with other stakeholders
- Examination of the final products generated by the item

Slide 105

Slide No	Trainer Notes
----------	---------------

105.

Discussion

- What information do you want to know from each of these methods?
- What questions can you ask?

Slide

Monitor new systems

Actual workplace effectiveness of computer asset

- Compliance reports
- Use of checklists
- Surveys
- Checklists
- Flowcharts
- Benchmarking

Slide 106

Slide No

Trainer Notes

106.

Discussion

- What information do you want to know from each of these methods?

Slide

Monitor new systems

Actual costs, savings or other benefits

- How has the company financial benefited by using the system
- Identification of the number of reported breakdowns, down-time and lost production
- Costs to service the item
- Costs to repair and maintain the item
- Running costs
- Checking life cycle statistics for parts

Slide 107

Slide No	Trainer Notes
107.	Discussion • How can you gather this information?

Slide

Monitor new systems

Ancillary considerations

Evaluation of the:

- Promises made by a supplier that have been kept
- Effectiveness and cost of maintenance plans and service contracts
- Staff training
- Warranties and guarantees
- Workplace usage of the item
- Physical workplace location of the item

COMPLETE ACTIVITY 22

Slide 108

Slide No	Trainer Notes
108.	Discussion & Complete Activity • How can you gather this information? • Complete Activity 22.

Slide

Element 3:

Maintain computer equipment and systems

Slide 109

Slide No	Trainer Notes
109.	Introduce topic. Class Activity – General Discussion Ask general questions: • Why is it important to maintain computer assets?

Slide

Maintain computer equipment and systems

Performance Criteria for this Element are:

- Establish and monitor systems for cleaning, minor maintenance and replacement of consumables in accordance with manufacturer's instructions
- Report faults to the nominated person or supplier for rectification
- Establish and monitor procedures for ensuring security of data, including regular back-ups and virus checks

Slide 110

Slide No	Trainer Notes
110.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Maintain computer equipment and systems

Performance Criteria for this Element are:

- Create document filing systems and procedures to reflect the size, nature and complexity of the workplace
- Set up equipment to accept the software and functions being used

Slide 111

Slide No	Trainer Notes
111.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Maintain computer equipment

Importance of maintaining computer equipment and systems

Now that new business computer systems are operational, there must be some mechanisms in place to ensure that the system and its individual components are maintained to perform at the best of their ability.

- What types of maintenance can be performed?
- How can you do it?
- How often should it be done?

Slide 112

Slide No

Trainer Notes

112.

Discussion

- Discuss the questions in the slide.

Slide

Maintain computer equipment

Types of maintenance

- Preventative maintenance
- Regular maintenance and servicing
- Repairs
- Physical cleaning of assets
- Cleaning of systems and internal memory
- Replacing consumables

Slide 113

Slide No	Trainer Notes
113.	Discussion What is the difference between these types of maintenance?

Slide

Preventive maintenance

Definition of preventative maintenance (PM)

Maintenance that is regularly performed on a piece of equipment to lessen the likelihood of it failing.

- What are examples of PM?
- What are the benefits of a PM program?
- What are the tasks associated with establishing a PM program?

COMPLETE ACTIVITY 23

Slide 114

Slide No	Trainer Notes
114.	Discussion & Complete Activity • Discuss the questions in the slide • Complete Activity 23.

Slide

Maintenance

Scheduling of maintenance

Scheduling is the allocation of labour power, materials and equipment, at specific times and locations, for accomplishment of prescribed maintenance work.

- What are considerations when scheduling maintenance?

Slide 115

Slide No	Trainer Notes
----------	---------------

115.

Discussion

- Discuss the question in the slide.

Slide

Maintenance

Considerations when scheduling maintenance

- Labour available - in-house or contract
- Materials and parts available
- Special operation needs
- Contingencies allowed for sudden emergency call-backs
- Minimised impact on overall operability of the facility
- Most efficient cost
- Minimised customer awareness
- Minimum downtime
- Quick start-up and return to operability

Slide 116

Slide No	Trainer Notes
116.	Discussion & Provide examples • Identify a number of common types of maintenance • Explain how these considerations would impact on the maintenance.

Slide

Repairs

Repairs

The repair process returns a faulty computer system asset into an operational condition.

Something is broken on the asset and the repair process makes the machine functional again.

- What are examples of repairs?
- Who would perform these repairs?

Slide 117

Slide No	Trainer Notes
----------	---------------

117.

Discussion

- Discuss the questions in the slide.

Slide

Physical cleaning of computer assets

Physical cleaning of computer assets

An important part of ensuring computer system assets are maintained, hygienic and retain a professional and functional look, is through regular cleaning.

- What assets need to be cleaned?
- How would you clean them?
- When should they be cleaned?
- Who should clean them?

COMPLETE ACTIVITY 24

Slide 118

Slide No	Trainer Notes
118.	Discussion & Complete Activity • Discuss the questions in the slide • Complete Activity 24.

Slide

Cleaning of system

Cleaning of systems and internal memory

Besides conducting an actual clean, 'internal cleans' may include:

- Creating more space on the hard disk
- Reviewing programs
- Deleting unwanted files
- Cleaning dust from internal surfaces
- Backing up files before major maintenance
- Checking hard drive for errors
- Decrementing the hard disk
- Using up-to-date anti-virus programs

Slide 119

Slide No	Trainer Notes
----------	---------------

119.

Discussion

- Why is this important?
- What are the steps associated with each of these 'internal cleans'?

Slide

Replacing consumables

Replacing consumables

In order for a tourism organisation to be operating efficiently, it is essential that not only can staff operate the computer system assets that exists within the office environment, but to also be able to identify and replace used technology consumables.

- What are examples of consumables?

Slide 120

Slide No	Trainer Notes
----------	---------------

120.	
------	--

Discussion

- Discuss question in the slide.

Slide

Replacing consumables

Replacing consumables

When preparing systems for replacement of consumables the following needs to be considered:

- Where are the consumables stored?
- When should they be re-ordered?
- What should be ordered?
- What are common 'unit' sizes?
- How much should be ordered?

Slide 121

Slide No	Trainer Notes
----------	---------------

121.

Discussion

- Discuss questions in the slide.

Slide

Replacing consumables

Replacing consumables

- Use of manufacturer products?
- Who should order?
- From whom should they be ordered from?
- Written record of consumables ordered?
- Ordering process and authorisation?

Slide 122

Slide No	Trainer Notes
----------	---------------

122.	Discussion • Discuss questions in the slide.
------	---

Slide

Replacing consumables

Training to replace consumables

As well as the physical process of replacing consumables, there may be operational considerations such as:

- Unscrewing screws
- Removing items
- Turning off equipment
- Performing back up of data

COMPLETE ACTIVITY 25

Slide 123

Slide No	Trainer Notes
123.	Discussion & Complete Activity • What training may take place? • Complete Activity 25.

Slide

Identify, report and resolve faults

Importance of identifying faults

Regardless of how much preventative maintenance you perform on your computer system assets, at times they will breakdown and faults will appear.

When faults appear, it is important to ensure that:

- They are identified in a prompt manner
- The correct procedures are in place to take the correct action to resolve the fault

Slide 124

Slide No

Trainer Notes

124.

Discussion

- What are common types of faults?

Slide

Identify, report and resolve faults

Examples of common faults

- Computer is too slow
- Internet downloads or uploads slow
- Computer won't start up
- Windows won't boot
- Computer keeps restarting on its own
- Monitor is blank
- Abnormally functioning operating system or software

Slide 125

Slide No	Trainer Notes
125.	Discussion • What are the solutions to these common types of faults?

Slide

Identify, report and resolve faults

Examples of common faults

- Strange noises
- Overheating
- Pop-up ads keep appearing
- READY light is not lit, or is glowing red
- Self-test labels will not print
- Labels will not feed, or feed continuously
- Flat batteries, or batteries have been removed

Slide 126

Slide No	Trainer Notes
126.	Discussion • What are the solutions to these common types of faults?

Slide

Identify, report and resolve faults

Examples of common faults

- Electricity cord has been accidentally knocked out or the plug has been removed
- Printer won't work
- Poor print quality
- Internet not connecting
- Wi-Fi keeps disconnecting
- Data or other connections have worked loose, or dropped out

Slide 127

Slide No	Trainer Notes
127.	Discussion • What are the solutions to these common types of faults?

Slide

Identify, report and resolve faults

Examples of common faults

- Can't open email attachments
- Can't email other people
- Programs aren't working on your PC
- Power point is switched 'on' but the machine is turned 'off'
- Scanner not reading at all, reading partially, or reading incorrectly
- Lack of signal from scanner to register /terminal – host stops responding
- Toner or ink has run out

Slide 128

Slide No	Trainer Notes
----------	---------------

128.

Discussion

- What are the solutions to these common types of faults?

Slide

Identify, report and resolve faults

Examples of common faults

- Paper-rolls have run out, or paper has jammed
- EFTPOS landline connection cannot be made to the bank, or connection is very slow
- Equipment malfunction or breakdown
- Power failure
- Operator error has caused the system or equipment to freeze
- Screen is frozen

COMPLETE ACTIVITY 26

Slide 129

Slide No	Trainer Notes
129.	Discussion & Complete Activity • What are the solutions to these common types of faults? • Complete Activity 26.

Slide

Identify, report and resolve faults

Identifying or anticipating faults

- The preparation of a scheduled maintenance program
- Routine checking of equipment
- Reading the instruction booklets
- Encouraging feedback from colleagues
- Keeping a log book of detected faults
- Performing regular OSH inspections

Slide 130

Slide No	Trainer Notes
130.	Discussion • Why are these important? • What else can you do?

Slide

Identify, report and resolve faults

Actions to take when computer faults are identified

- Note details of the fault
- Notify the appropriate in-house IT expert
- Check manual for trouble shooting hints
- Utilise help desk, on-line help, etc
- Call in IT support for a service call
- Record notification of a service call
- Equipment should be removed from service

Slide 131

Slide No	Trainer Notes
----------	---------------

131.

Discussion

- Discuss the importance and tasks associated with these actions.

Slide

Identify, report and resolve faults

Actions to take when computer faults are identified

- Equipment should be labelled clearly as 'Out of Service'
- Equipment should be stored in the appropriate out of service area
- Appropriate report fault paperwork should be completed and submitted
- Returning the item to the supplier or forwarding it to an accredited repairer.
- In extreme cases, a new item may have to be purchased
- Monitor repairs made

Slide 132

Slide No	Trainer Notes
132.	Discussion • Discuss the importance and tasks associated with these actions.

Slide

Identify, report and resolve faults

Note details of a fault

- Person's name
- Contact details
- Email address
- Sequence of events
- Asset name
- Model

Slide 133

Slide No	Trainer Notes
133.	Discussion • Why are these pieces of information important when recording details of a fault?

Slide

Identify, report and resolve faults

Note details of a fault

- Finance officer
- Problem description
- Service contract number
- Serial number of machine
- Urgency of the problem
- Access hours

Slide 134

Slide No	Trainer Notes
134.	Discussion • Why are these pieces of information important when recording details of a fault?

Slide

Using external specialists

Using external specialist to conduct maintenance and servicing

Specialised assistance may include:

- External Information Technology (IT) support
- Use of commercial 'help' desks
- Manufacturer

Slide 135

Slide No	Trainer Notes
----------	---------------

135.	Discussion • What are examples of these specialists in your region? • What services do they provide?
------	---

Slide

Using external specialists

Service details to be recorded

Outside contractors should also leave a written/ or printed report detailing the following:

- Work that they have done
- Time they have taken
- Parts that they have replaced
- Faults they have identified
- Warrantees relating to repairs

COMPLETE ACTIVITY 27

Slide 136

Slide No	Trainer Notes
136.	Discussion & Complete Activity • Why is this important? • Complete Activity 27.

Slide

Secure and back up data

Importance of securing and backing up data

In many cases, whilst the breakdown of hardware is a nuisance, the loss of data may be detrimental to an organisation.

There are a number of other tasks that can be performed that will minimise the effect and loss of information due to computer system breakages or by theft of data.

- What tasks can be performed?

Slide 137

Slide No	Trainer Notes
137.	Discussion Discuss the question in the slide.

Slide

Passwords

Establishing passwords

In order to protect the integrity of the system from unauthorised access and also to maintain the confidentiality of establishment information and customer details, it is usual for passwords to be used.

- What is involved in establishing passwords?
- What policies and procedures may apply to establishing and using passwords?
- How can you make passwords as secure as possible

Slide 138

Slide No

Trainer Notes

138.

Discussion

- Discuss the questions in the slide.

Slide

Prevent computer viruses

Computer viruses

Computer viruses are identified as small software programs that have been designed to spread from one computer to another and to negatively interfere with the operations of a computer.

- How do they get into your computer?
- What damage can they do?
- How can you prevent or remove viruses?

Slide 139

Slide No	Trainer Notes
139.	Discussion • Discuss the questions in the slide.

Slide

Prevent computer viruses

Damage caused by computer viruses

There are endless computer viruses that exist, each with a detrimental purpose including:

- Corrupt or delete data on your computer
- Use your email program to spread itself to other computers
- Erase all information on hard disks

Slide 140

Slide No

Trainer Notes

140.

Discussion

- Discuss impact of this damage
- Provide personal stories of trainer and participants.

Slide

Prevent computer viruses

The spread of computer viruses

One way to control viruses is to identify how viruses can be spread.

The way computer viruses can spread includes:

- Through internet downloads
- As attachments in email messages or instant messaging messages
- Disguised as attachments of audio and video files and images

Slide 141

Slide No

Trainer Notes

141.

Discussion

- Provide personal stories of trainer and participants.

Slide

Prevent computer viruses

Control of computer viruses

The main aim of controlling viruses is to:

- Remove it
- Prevent further infection

Slide 142

Slide No

Trainer Notes

142.

Discussion

- Describe approaches that can be undertaken for each method.

Slide

Prevent computer viruses

Types of virus preventative actions

Examples of virus preventative actions include, but certainly not limited to:

- Install antivirus tools
- Keep computer current with latest updates
- Run regular virus checks
- Run regular scandisk facility

COMPLETE ACTIVITY 28

Slide 143

Slide No	Trainer Notes
143.	Discussion & Complete Activity • What are examples of each? • Complete Activity 28.

Slide

Use computers safely

Use computer systems in a safe and secure manner

- Use the technology in the correct manner
- Use the technology effectively
- Maintain security
- Staff should not use equipment for private use
- Do not use private discs or flash drives in workplace computers
- Never allow customers or others to access or use establishment equipment
- Report any instances of breaches of protocols

Slide 144

Slide No	Trainer Notes
144.	Discussion • What are examples of each? • What else can you do to use computer systems in a safe and secure manner?

Slide

Back up data

Perform regular backups of data

Despite our best efforts, despite all our preventative maintenance, and despite all the feedback in the world from staff, technology will still let us down.

One good way of minimising the adverse impacts of the computer crashing is to do regular backups of data.

A back-up is a second copy made to protect your information against accidental loss or damage.

- What types of back-ups can be performed?

Slide 145

Slide No	Trainer Notes
145.	Discussion • Discuss question in the slide.

Slide

Back up data

Golden rules to backing up data

A simple way to minimise the loss of information is to have three versions:

- Original
- Back up of the original
- Back up of the back up

In addition it is vital to have back up versions stored in different secure locations

Slide 146

Slide No	Trainer Notes
146.	Discussion • Discuss steps taken to back up personal data at home and relate how it can be used in the workplace.

Slide

Back up data

Methods to back up data

- Online storage services - such as iDrive, iCloud, Dropbox, Carbonite, Google Drive, Mozy or SkyDrive
- Consolidate data on different PC's and phones to one centralised point
- External hard drives
- Using backup software - such as Windows Backup

COMPLETE ACTIVITY 29

Slide 147

Slide No	Trainer Notes
147.	Discussion & Research & Complete Activity • Discuss benefits of each method • Conduct research and identify types of online storage systems • Complete Activity 29.

Slide

Computer filing systems

Types of data management policies and procedures

- Administration requirements
- Internal accounting systems
- Authorised use of equipment
- Security
- Confidentiality
- Timing and frequency requirements

Slide 148

Slide No

Trainer Notes

148.

Discussion

- What are examples?
- What other data management policies and procedures may you use?

Slide

Computer filing systems

Storing data

- Storage in directories and sub-directories
- Storage on hard drives
- Storage on networked computers
- Appropriate filing and storage of hard copies of computer-generated documents

Slide 149

Slide No	Trainer Notes
149.	Discussion • What are other ways to store data?

Slide

Computer filing systems

Key outcomes of a data management system

- All data will be managed in accordance with set organisational procedures
- All staff understand what constitutes official data
- Business activities are to be documented in the form of records
- Any data or record can be retrieved easily when requested
- All data must be stored safely and securely
- Archived data will be managed in accordance with legislative requirements
- Intellectual Property is captured, maintained and protected

COMPLETE ACTIVITY 30

Slide 150

Slide No	Trainer Notes
150.	Discussion & Complete Activity • What other key outcomes would you have? • How can you achieve these key outcomes? • Complete Activity 30.

Recommended training equipment

Asset budgeting templates

Computer

Computer asset management information or software

Computer documents including:

Types of documents

Documents that may accompany the delivery of assets can include:

- Guarantees and warranties
- Installation instructions
- Wiring diagrams
- Manuals
- Trouble-shooting guides
- Spare parts lists
- Maintenance schedules

Computer magazines and journals

Computer manuals and training booklets

Computer preventative maintenance schedules

Computer related policies and procedures

Computer training programs examples

Computerised reservation systems (CRS) access

Global Distribution System (GDS) access

Internet access

Information, samples, and brochures etc. relating to key assets of a business computer system including:

- Internet service provider
- Modem
- Router
- Network card
- Servers
- Ethernet cables
- Wired or Ethernet networks
- Wireless networks

- Local area network (LAN)
- Network security
- Desktops
- Laptops
- Netbooks
- Tablet computers
- Thin clients

Instructions for Trainers for using PowerPoint – Presenter View

Connect your laptop or computer to your projector equipment as per manufacturers' instructions.

In PowerPoint, on the **Slide Show** menu, click **Set up Show**.

Under Multiple monitors, select the Show Presenter View check box.

In the **Display slide show** on list, click the monitor you want the slide show presentation to appear on.

Source: <http://office.microsoft.com>

Note:

In Presenter View:

You see your notes and have full control of the presentation

Your trainees only see the slide projected on to the screen

More Information

You can obtain more information on how to use PowerPoint from the Microsoft Online Help Centre, available at:

<http://office.microsoft.com/training/training.aspx?AssetID=RC011298761033>

Note Regarding Currency of URLs

Please note that where references have been made to URLs in these training resources trainers will need to verify that the resource or document referred to is still current on the internet. Trainers should endeavour, where possible, to source similar alternative examples of material where it is found that either the website or the document in question is no longer available online.
