Competency Based Training (CBT) and assessment – An introduction for trainers

Competency

Competency refers to the ability to perform particular tasks and duties to the standard of performance expected in the workplace.

Competency requires the application of specified knowledge, skills and attitudes relevant to effective participation, consistently over time and in the workplace environment.

The essential skills and knowledge are either identified separately or combined.

Knowledge identifies what a person needs to know to perform the work in an informed and effective manner.

Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Attitude describes the founding reasons behind the need for certain knowledge or why skills are performed in a specified manner.

Competency covers all aspects of workplace performance and involves:

- Performing individual tasks
- Managing a range of different tasks
- Responding to contingencies or breakdowns
- Dealing with the responsibilities of the workplace
- Working with others.

Unit of Competency

Like with any training qualification or program, a range of subject topics are identified that focus on the ability in a certain work area, responsibility or function.

Each manual focuses on a specific unit of competency that applies in the hospitality workplace.

In this manual a unit of competency is identified as a 'unit'.

Each unit of competency identifies a discrete workplace requirement and includes:

- Knowledge and skills that underpin competency
- Language, literacy and numeracy
- Occupational health and safety requirements.

Each unit of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Element of Competency

An element of competency describes the essential outcomes within a unit of competency.

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

In this manual elements of competency are identified as an 'element'.

Performance criteria

Performance criteria indicate the standard of performance that is required to demonstrate achievement within an element of competency. The standards reflect identified industry skill needs.

Performance criteria will be made up of certain specified skills, knowledge and attitudes.

Learning

For the purpose of this manual learning incorporates two key activities:

- Training
- Assessment.

Both of these activities will be discussed in detail in this introduction.

Today training and assessment can be delivered in a variety of ways. It may be provided to participants:

- On-the-job – in the workplace
- Off-the-job – at an educational institution or dedicated training environment
- As a combination of these two options.

No longer is it necessary for learners to be absent from the workplace for long periods of time in order to obtain recognised and accredited qualifications.

Learning Approaches

This manual will identify two avenues to facilitate learning:

Competency Based Training (CBT)

This is the strategy of developing a participant's competency.

Educational institutions utilise a range of training strategies to ensure that participants are able to gain the knowledge and skills required for successful:

- Completion of the training program or qualification
- Implementation in the workplace.

The strategies selected should be chosen based on suitability and the learning styles of participants.

Competency Based Assessment (CBA)

This is the strategy of assessing competency of a participant.

Educational institutions utilise a range of assessment strategies to ensure that participants are assessed in a manner that demonstrates validity, fairness, reliability, flexibility and fairness of assessment processes.

Flexibility in Learning

It is important to note that flexibility in training and assessment strategies is required to meet the needs of participants who may have learning difficulties. The strategies used will vary, taking into account the needs of individual participants with learning difficulties. However they will be applied in a manner which does not discriminate against the participant or the participant body as a whole.

Catering for Participant Diversity

Participants have diverse backgrounds, needs and interests. When planning training and assessment activities to cater for individual differences, trainers and assessors should:

- Consider individuals' experiences, learning styles and interests
- Develop questions and activities that are aimed at different levels of ability
- Modify the expectations for some participants
- Provide opportunities for a variety of forms of participation, such as individual, pair and small group activities
- Assess participants based on individual progress and outcomes.

The diversity among participants also provides a good reason for building up a learning community in which participants support each other's learning.

Participant Centred Learning

This involves taking into account structuring training and assessment that:

- *Builds on strengths* – Training environments need to demonstrate the many positive features of local participants (such as the attribution of academic success to effort, and the social nature of achievement motivation) and of their trainers (such as a strong emphasis on subject disciplines and moral responsibility). These strengths and uniqueness of local participants and trainers should be acknowledged and treasured
- *Acknowledges prior knowledge and experience* – The learning activities should be planned with participants' prior knowledge and experience in mind
- *Understands learning objectives* – Each learning activity should have clear learning objectives and participants should be informed of them at the outset. Trainers should also be clear about the purpose of assignments and explain their significance to participants
- *Teaches for understanding* – The pedagogies chosen should aim at enabling participants to act and think flexibly with what they know
- *Teaches for independent learning* – Generic skills and reflection should be nurtured through learning activities in appropriate contexts of the curriculum. Participants should be encouraged to take responsibility for their own learning

- *Enhances motivation* – Learning is most effective when participants are motivated. Various strategies should be used to arouse the interest of participants
- *Makes effective use of resources* – A variety of teaching resources can be employed as tools for learning
- *Maximises engagement* – In conducting learning activities, it is important for the minds of participants to be actively engaged
- *Aligns assessment with learning and teaching* – Feedback and assessment should be an integral part of learning and teaching
- *Caters for learner diversity* – Trainers should be aware that participants have different characteristics and strengths and try to nurture these rather than impose a standard set of expectations.

Active Learning

The goal of nurturing independent learning in participants does not imply that they always have to work in isolation or solely in a classroom. On the contrary, the construction of knowledge in tourism and hospitality studies can often best be carried out in collaboration with others in the field. Sharing experiences, insights and views on issues of common concern, and working together to collect information through conducting investigative studies in the field (active learning) can contribute a lot to their eventual success.

Active learning has an important part to play in fostering a sense of community in the class. First, to operate successfully, a learning community requires an ethos of acceptance and a sense of trust among participants, and between them and their trainers. Trainers can help to foster acceptance and trust through encouragement and personal example, and by allowing participants to take risks as they explore and articulate their views, however immature these may appear to be. Participants also come to realise that their classmates (and their trainers) are partners in learning and solving.

Trainers can also encourage cooperative learning by designing appropriate group learning tasks, which include, for example, collecting background information, conducting small-scale surveys, or producing media presentations on certain issues and themes. Participants need to be reminded that, while they should work towards successful completion of the field tasks, developing positive peer relationships in the process is an important objective of all group work.

Competency Based Training (CBT)

Principle of Competency Based Training

Competency based training is aimed at developing the knowledge, skills and attitudes of participants, through a variety of training tools.

Training Strategies

The aims of this curriculum are to enable participants to:

- Undertake a variety of subject courses that are relevant to industry in the current environment
- Learn current industry skills, information and trends relevant to industry
- Learn through a range of practical and theoretical approaches
- Be able to identify, explore and solve issues in a productive manner

- Be able to become confident, equipped and flexible managers of the future
- Be 'job ready' and a valuable employee in the industry upon graduation of any qualification level.

To ensure participants are able to gain the knowledge and skills required to meet competency in each unit of competency in the qualification, a range of training delivery modes are used.

Types of Training

In choosing learning and teaching strategies, trainers should take into account the practical, complex and multi-disciplinary nature of the subject area, as well as their participant's prior knowledge, learning styles and abilities.

Training outcomes can be attained by utilising one or more delivery methods:

Lecture/Tutorial

This is a common method of training involving transfer of information from the trainer to the participants. It is an effective approach to introduce new concepts or information to the learners and also to build upon the existing knowledge. The listener is expected to reflect on the subject and seek clarifications on the doubts.

Demonstration

Demonstration is a very effective training method that involves a trainer showing a participant how to perform a task or activity. Through a visual demonstration, trainers may also explain reasoning behind certain actions or provide supplementary information to help facilitate understanding.

Group Discussions

Brainstorming in which all the members in a group express their ideas, views and opinions on a given topic. It is a free flow and exchange of knowledge among the participants and the trainer. The discussion is carried out by the group on the basis of their own experience, perceptions and values. This will facilitate acquiring new knowledge. When everybody is expected to participate in the group discussion, even the introverted persons will also get stimulated and try to articulate their feelings.

The ideas that emerge in the discussions should be noted down and presentations are to be made by the groups. Sometimes consensus needs to be arrived at on a given topic. Group discussions are to be held under the moderation of a leader guided by the trainer. Group discussion technique triggers thinking process, encourages interactions and enhances communication skills.

Role Play

This is a common and very effective method of bringing into the classroom real life situations, which may not otherwise be possible. Participants are made to enact a particular role so as to give a real feel of the roles they may be called upon to play. This enables participants to understand the behaviour of others as well as their own emotions and feelings. The instructor must brief the role players on what is expected of them. The role player may either be given a ready-made script, which they can memorise and enact, or they may be required to develop their own scripts around a given situation. This technique is extremely useful in understanding creative selling techniques and human relations. It can be entertaining and energising and it helps the reserved and less literate to express their feelings.

Simulation Games

When trainees need to become aware of something that they have not been conscious of, simulations can be a useful mechanism. Simulation games are a method based on "here and now" experience shared by all the participants. The games focus on the participation of the trainees and their willingness to share their ideas with others. A "near real life" situation is created providing an opportunity to which they apply themselves by adopting certain behaviour. They then experience the impact of their behaviour on the situation. It is carried out to generate responses and reactions based on the real feelings of the participants, which are subsequently analysed by the trainer.

While use of simulation games can result in very effective learning, it needs considerable trainer competence to analyse the situations.

Individual /Group Exercises

Exercises are often introduced to find out how much the participant has assimilated. This method involves imparting instructions to participants on a particular subject through use of written exercises. In the group exercises, the entire class is divided into small groups, and members are asked to collaborate to arrive at a consensus or solution to a problem.

Case Study

This is a training method that enables the trainer and the participant to experience a real life situation. It may be on account of events in the past or situations in the present, in which there may be one or more problems to be solved and decisions to be taken. The basic objective of a case study is to help participants diagnose, analyse and/or solve a particular problem and to make them internalise the critical inputs delivered in the training. Questions are generally given at the end of the case study to direct the participants and to stimulate their thinking towards possible solutions. Studies may be presented in written or verbal form.

Field Visit

This involves a carefully planned visit or tour to a place of learning or interest. The idea is to give first-hand knowledge by personal observation of field situations, and to relate theory with practice. The emphasis is on observing, exploring, asking questions and understanding. The trainer should remember to brief the participants about what they should observe and about the customs and norms that need to be respected.

Group Presentation

The participants are asked to work in groups and produce the results and findings of their group work to the members of another sub-group. By this method participants get a good picture of each other's views and perceptions on the topic and they are able to compare them with their own point of view. The pooling and sharing of findings enriches the discussion and learning process.

Practice Sessions

This method is of paramount importance for skills training. Participants are provided with an opportunity to practice in a controlled situation what they have learnt. It could be real life or through a make-believe situation.

Games

This is a group process and includes those methods that involve usually fun-based activity, aimed at conveying feelings and experiences, which are everyday in nature, and applying them within the game being played. A game has set rules and regulations, and may or may not include a competitive element. After the game is played, it is essential that the participants be debriefed and their lessons and experiences consolidated by the trainer.

Research

Trainers may require learners to undertake research activities, including online research, to gather information or further understanding about a specific subject area.

Competency Based Assessment (CBA)

Principle of Competency Based Assessment

Competency based assessment is aimed at compiling a list of evidence that shows that a person is competent in a particular unit of competency.

Competencies are gained through a multitude of ways including:

- Training and development programs
- Formal education
- Life experience
- Apprenticeships
- On-the-job experience
- Self-help programs.

All of these together contribute to job competence in a person. Ultimately, assessors and participants work together, through the 'collection of evidence' in determining overall competence.

This evidence can be collected:

- Using different formats
- Using different people
- Collected over a period of time.

The assessor, who is ideally someone with considerable experience in the area being assessed, reviews the evidence and verifies the person as being competent or not.

Flexibility in Assessment

Whilst allocated assessment tools have been identified for this subject, all attempts are made to determine competency and suitable alternate assessment tools may be used, according to the requirements of the participant.

The assessment needs to be equitable for all participants, taking into account their cultural and linguistic needs.

Competency must be proven regardless of:

- Language
- Delivery Method
- Assessment Method.

Assessment Objectives

The assessment tools used for subjects are designed to determine competency against the 'elements of competency' and their associated 'performance criteria'.

The assessment tools are used to identify sufficient:

- a) Knowledge, including underpinning knowledge
- b) Skills
- c) Attitudes

Assessment tools are activities that trainees are required to undertake to prove participant competency in this subject.

All assessments must be completed satisfactorily for participants to obtain competence in this subject. There are no exceptions to this requirement, however, it is possible that in some cases several assessment items may be combined and assessed together.

Types of Assessment

Allocated Assessment Tools

There are a number of assessment tools that are used to determine competency in this subject:

- Work projects
- Written questions
- Oral questions
- Third Party Report
- Observation Checklist.

Instructions on how assessors should conduct these assessment methods are explained in the Assessment Manuals.

Alternative Assessment Tools

Whilst this subject has identified assessment tools, as indicated above, this does not restrict the assessor from using different assessment methods to measure the competency of a participant.

Evidence is simply proof that the assessor gathers to show participants can actually do what they are required to do.

Whilst there is a distinct requirement for participants to demonstrate competency, there are many and diverse sources of evidence available to the assessor.

Ongoing performance at work, as verified by a supervisor or physical evidence, can count towards assessment. Additionally, the assessor can talk to customers or work colleagues to gather evidence about performance.

A range of assessment methods to assess competency include:

- Practical demonstrations
- Practical demonstrations in simulated work conditions
- Problem solving
- Portfolios of evidence
- Critical incident reports
- Journals
- Oral presentations
- Interviews
- Videos
- Visuals: slides, audio tapes
- Case studies
- Log books
- Projects
- Role plays
- Group projects
- Group discussions
- Examinations.

Recognition of Prior Learning

Recognition of Prior Learning is the process that gives current industry professionals who do not have a formal qualification, the opportunity to benchmark their extensive skills and experience against the standards set out in each unit of competency/subject.

Also known as a Skills Recognition Audit (SRA), this process is a learning and assessment pathway which encompasses:

- Recognition of Current Competencies (RCC)
- Skills auditing
- Gap analysis and training
- Credit transfer.

Assessing competency

As mentioned, assessment is the process of identifying a participant's current knowledge, skills and attitudes sets against all elements of competency within a unit of competency. Traditionally in education, grades or marks were given to participants, dependent on how many questions the participant successfully answered in an assessment tool.

Competency based assessment does not award grades, but simply identifies if the participant has the knowledge, skills and attitudes to undertake the required task to the specified standard.

Therefore, when assessing competency, an assessor has two possible results that can be awarded:

- Pass Competent (PC)
- Not Yet Competent (NYC).

Pass Competent (PC)

If the participant is able to successfully answer or demonstrate what is required, to the expected standards of the performance criteria, they will be deemed as 'Pass Competent' (PC).

The assessor will award a 'Pass Competent' (PC) if they feel the participant has the necessary knowledge, skills and attitudes in all assessment tasks for a unit.

Not Yet Competent' (NYC)

If the participant is unable to answer or demonstrate competency to the desired standard, they will be deemed to be 'Not Yet Competent' (NYC).

This does not mean the participant will need to complete all the assessment tasks again. The focus will be on the specific assessment tasks that were not performed to the expected standards.

The participant may be required to:

- a) Undertake further training or instruction
- b) Undertake the assessment task again until they are deemed to be 'Pass Competent'.

Competency standard

UNIT TITLE: APPLY STANDARD SAFETY PROCEDURES FOR HANDLING FOODSTUFFS		NOMINAL HOURS: 45
UNIT NUMBER: D1.HRS.CL1.02		
UNIT DESCRIPTOR: This unit deals with the skills and knowledge required to apply standard safety procedures for handling foodstuffs in a range of settings within the in the hotel and travel industries workplace context		
ELEMENTS AND PERFORMANCE CRITERIA		UNIT VARIABLE AND ASSESSMENT GUIDE
Element 1: Identify hazards and risks 1.1 Identify key <i>hazards and risks</i> associated with the individual work role 1.2 Check own work area to identify hazards and risks Element 2: Follow enterprise hygiene standards, procedures and practices 2.1 Implement required personal hygiene practices 2.2 Maintain clothing to meet work area standards 2.3 Follow <i>hygiene procedures</i> in accordance with enterprise requirements Element 3: Handle and store foodstuffs 3.1 Handle and store <i>foodstuffs</i> according to enterprise guidelines 3.2 Handle and store foodstuffs in a manner that avoids damage and <i>contamination</i> , meets hygiene standards, and maintains quality 3.3 Store foodstuffs at the correct temperature		Unit Variables The Unit Variables provide advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment This unit applies to standard safety procedures for handling foodstuffs within the labour divisions of the hotel and travel industries and may include: 1. Food and Beverage Service 2. Food Production. <i>Hazards and risks</i> may include: • Biological hazards, such as bacteria, moulds, yeast, other organic matter and contaminants • Physical hazards, including broken glass, metal, plastic, foreign matter, dirt, etc. • Chemical hazards, such as additives, chemicals and natural poisons • Hygiene, such as personal habits, illness, clothing and cleanliness of self, work area and equipment. <i>Hygiene procedures</i> may include enterprise procedures covering: • Personal habits/hygiene • Using protective clothing

Element 4: Follow food safety program 4.1 Ensure work activities conform with the enterprise food safety program 4.2 Identify and monitor areas of risk in individual work area 4.3 Take corrective actions within individual scope of responsibilities to minimise risk in accordance with the enterprise food safety program 4.4 Report risks beyond the control of the individual to the <i>appropriate person(s)</i> 4.5 Complete <i>records</i> according to enterprise requirements and work responsibility	• Equipment/work area • Product contamination/cross contamination. <i>Foodstuffs</i> may include: • Meat, such as beef, pork, lamb and chicken • Fish and shellfish • Commodities, including fresh, dried and preserved • Cooked and raw product • Fruits and vegetables • Dry goods • Frozen foods • Pre-prepared food products. <i>Contamination</i> may include: • Cross contamination when a cooked product is contaminated by contact with a raw product • Edible product contaminated by waste • Biological contamination, such as bacteria, moulds, yeast, other organic matter and contaminants • Physical contamination, including broken glass, metal, plastic, foreign matter, dirt • Chemical contamination, such as additives, chemicals and natural poisons. <i>Appropriate persons</i> may include: • Supervisors • Managers • Local authorities. <i>Records</i> may include: • Temperature charts • Delivery information • Storage information • First In First Out (FIFO) • Use by dates.
---	--

	Assessment Guide The following skills and knowledge must be assessed as part of this unit: • Knowledge of the enterprise's policies and procedures in regard to complying with the enterprise food safety program • Understanding the basic principles of food safety • Demonstrated ability to follow food safety procedures when moving food between locations • Demonstrated ability to use storage equipment. Linkages to other units • Comply with workplace hygiene procedures • Receive and store kitchen supplies and food stock • Maintain strategies for safe storage of prepared foods • Receive and store stock. Critical Aspects of Assessment Evidence of the following is essential: • Demonstrated ability to inspect the work area to identify common foodstuff safety hazards/risks • Demonstrated ability to maintain personal hygiene and conduct to minimise risk to food products • Knowledge of handling and storing foodstuffs. Context of Assessment This unit may be assessed on or off the job • Assessment should include practical demonstration either in the workplace or through a simulation activity, supported by a range of methods to assess underpinning knowledge • Assessment must relate to the individual's work area or area of responsibility. Resource Implications Training and assessment to include access to a real or simulated workplace and workplace documents and access to workplace standards, procedures, policies, guidelines, tools and equipment.
--	--

	Assessment Methods The following methods may be used to assess competency for this unit: • Case studies • Observation of practical candidate performance • Oral and written questions • Portfolio evidence • Problem solving • Role plays • Third party reports completed by a supervisor • Project and assignment work. Key Competencies in this Unit <i>Level 1 = competence to undertake tasks effectively</i> <i>Level 2 = competence to manage tasks</i> <i>Level 3 = competence to use concepts for evaluating and reshaping tasks</i>
--	--

	Key Competencies	Level	Examples
	Collecting, organising and analysing information	1	Interpret procedures correctly
	Communicating ideas and information	1-	Share information with other staff
	Planning and organising activities	1	Prioritise actions
	Working with others and in teams	1	Identify and minimise hazards
	Using mathematical ideas and techniques	-	
	Solving problems	1	Use relevant enterprise procedures to resolve problems
	Using technology	-1	Use temperature recording equipment

Notes and PowerPoint slides

Slide

APPLY STANDARD SAFETY PROCEDURES FOR HANDLING FOODSTUFFS

D1.HRS.CL1.02

Slide 1

Slide No	Trainer Notes
1.	Trainer welcomes trainees to class.

Slide

Apply standard safety procedures for handling foodstuffs

This Unit comprises four Elements:

- Identify hazards and risks
- Follow enterprise hygiene standards, procedures and practices
- Handle and store foodstuffs
- Follow food safety program

Slide 2

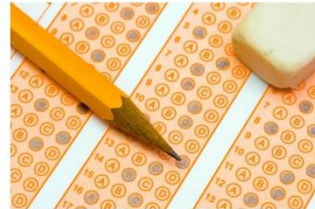

Slide No	Trainer Notes
2.	Trainer advises trainees this Unit comprises four Elements, as listed on the slide explaining: • Each Element comprises a number of Performance Criteria which will be identified throughout the class and explained in detail • Trainees can obtain more detail from their Trainee Manual • At times the course presents advice and information about various protocols but where their workplace requirements differ to what is presented, the workplace practices and standards, as well as policies and procedures must be observed.

Slide

Assessment

Assessment for this unit may include:

- Oral questions
- Written questions
- Work projects
- Workplace observation of practical skills
- Practical exercises
- Formal report from employer/supervisor

Slide 3

Slide No	Trainer Notes
3.	Trainer advises trainees that assessment for this Unit may take several forms, all of which are aimed at verifying they have achieved competency for the Unit as required. Trainer indicates to trainees the methods of assessment that will be applied to them for this Unit.

Slide

Identify hazards and risks

Performance Criteria for this Element are:

- Identify key hazards and risks associated with individual work role ✓
- Check own work area to identify hazards and risks ✓

Slide 4

Slide No	Trainer Notes
4.	Trainer identifies for trainees the Performance Criteria for this Element, as listed on the slide. Class Activity – General Discussion Trainer leads a general class discussion on identifying workplace food safety hazards and risks by asking questions such as: • Why is it important maintain food safety in the workplace? • What issues might or food safety? • What are examples of things which could contaminate food? • How might food become contaminated? • What are the possible results of people being poisoned by food?

Slide

Identify key hazards and risks

Ways to identify food risks and hazards:

- Personal observation
- Personal experience
- Analysis of food safety records
- Regular workplace inspections

Slide 5

Slide No	Trainer Notes
5.	Trainer states identifying workplace food safety hazards and risks is a critical element in applying safe food handling practices as identification of the problem is necessary to allow problems to be addressed advising the standard ways to identify key food safety hazards and risks in the workplace are: • Personal observation – of: ▪ Workplace practice ▪ Foodstuff ▪ Equipment ▪ Compliance with safe food handling practices and established, internal requirements • As a result of personal experience with items and situations – you will gain increasing knowledge as you work with food which will help you identify issues and analyse situations • Analysis of food safety records, documents and logs – which can reveal issues such as: ▪ Refrigeration and freezers operating at incorrect temperatures ▪ Food holding and display equipment operating at incorrect temperatures ▪ Equipment and areas requiring attention or repair ▪ Staff who are ill and who should be excluded from food handling duties

- Conducting regular and scheduled workplace inspections and checks (audits) – to identify problem situations.

Class Activity – Handouts

Trainer distributes and discusses sample workplace food safety inspection checklists/audits.

Slide

Identify key hazards and risks

Hazards and risks can occur at any food handling stage and may be in the form of:

- Microbiological contamination
- Chemical contamination
- Physical contamination

Slide 6

Slide No	Trainer Notes
6.	Trainer advises trainees in relation to hazards and risks explaining: • Hazards and risks can occur at any stage in the food handling process • A hazard may be seen as something which actually exists and is likely to cause/result in harm • A risk may be seen as: ▪ Something likely to occur which would cause harm ▪ The potential for harm or injury to occur when a hazard occurs • For practical purposes the two terms can be used interchangeably.

Slide

Identify key hazards and risks

Microbiological contamination may be caused by:

- Bacteria
- Moulds
- Yeasts
- Viruses

Slide 7

Slide No	Trainer Notes
7.	Trainer advises microbiological contamination is caused by bacteria, moulds, yeasts and viruses via intoxication or infection informing students problem bacteria include: • Clostridium perfringens – usually caused when food is cooked, chilled overnight and re-heated, or found in foods that are cooked 'rare'. The initial source of the contamination is faeces (man, birds, animal or insects) which is introduced somewhere along the food chain/production line (failure of staff to wash their hands after the toilet; flies carrying it onto food; contamination at the abattoir) • Salmonella – a very common contaminant. Faecal contamination is a prime source (failure to wash hands after the toilet; flies carrying it onto foods; leaky plumbing; fish harvested from waters polluted by sewage) • Streptococci – caused by nasal or oral discharges into food (coughing, sneezing), either directly or via hands that have been so contaminated • Staphylococcus aureus – rapidly-acting bacteria where the main source is the food handler: nose, throat, mouth, skin, pimples and cuts • Contamination may occur directly (coughing or sneezing onto food) or indirectly (coughing/sneezing into hands and then using the hands to handle food) • Clostridium botulinum – a rare bacteria but a very lethal contaminant (65% mortality rate). Can occur when heat processing of tins and jars is incomplete allowing spores (see below) to survive and cause the problem. Any tin that 'spurts' when opened, is leaky or is 'blown', or jars with broken seals must be discarded as this is a sign of botulism contamination: there is no adverse smell and food must not be tasted to test it as the small amount ingested during tasting can kill. Note there is usually no sign food has been infected by bacteria.

Slide

Identify key hazards and risks

High risk food handling situations that may involve microbiological contamination:

- Working with high risk foods
- Working with food in Temperature Danger Zone
- Displaying food
- Processing food
- Thawing and reheating of food

Slide 8

Slide No	Trainer Notes
8.	Trainer states high risk food handling situations that may involve microbiological contamination include: • Working with any high risk/potentially hazardous foods • Working in temperatures that promote rapid bacterial growth • Displays of food and buffets – where the temperature may be compromised (hot food may fall below 60°C, cold food may rise above 5°C), plus there is always the danger members of the public – untrained in correct food handling procedures – may contaminate the food • Processing the food where it is touched by the bare hand and not subsequently cooked • Any situation requiring thawing and re-heating of high risk food always poses a risk the food may stay in the Temperature Danger Zone too long.

Slide

Identify key hazards and risks

Chemical contamination can be caused by:

- Chemicals used on food when it is grown or processed
- Chemicals inadvertently introduced to food
- Over usage of fertilizers and pesticides by farmers
- Contaminated food by radioactive particles
- Naturally occurring poisonous food

Slide 9

Slide No	Trainer Notes
9.	Trainer informs students chemical contamination can include contamination caused by chemicals: ● Used on the food to produce and/or process it ● Which find their way inadvertently into the food due to careless handling – for example: ▪ Fly spray sprayed into the air and landing on food ▪ Using a jug/container to measure chemicals and then using the same jug (without washing and sanitising) to mix a sauce which is poured over food. Specific and identified measuring vessels should always be allocated for chemicals – staff must not be allowed to use food service items to obtain, measure or pour any chemical. All chemicals must be stored away from food areas at all times. ● Naturally occurring poisonous food are also classified as part of the 'chemical contamination' threat. Be aware of the following: ▪ Mushrooms – certain fungi can be poisonous but those purchased from reputable suppliers should be safe: do not buy mushrooms from people calling door-to-door, and do not use in a commercial setting, mushrooms picked by private individuals ▪ Rhubarb leaves are poisonous so great care should be given when stemming them ▪ Green and sprouting potatoes contain a substance called 'solanine' which has been linked with food poisoning outbreaks so green potatoes should be discarded, returned to the supplier or rejected on delivery.

Slide

Identify key hazards and risks

Physical contamination can occur:

- Before food arrives at the venue
- During storage, preparation, service or other procedures

Constant vigilance is required to identify physical contaminants.

Slide 10

Slide No	Trainer Notes
10.	Trainer tells students all food handlers must be on their guard to ensure foreign objects do not find their way into food for human consumption, remembering the foreign object may have found its way into the food before the product/item arrived at the premises. Students must be constantly on the lookout for physical contaminants. Class Activity – Question/Discussion Trainer asks students to identify possible physical contaminants. Possible answers include: • Hair from the head or beard • Metal filings left by can openers • Flies and insects – and their droppings • Bits of equipment and utensils which break off during the food preparation process and become incorporated into the food • Bits of glass.

Slide

Identify key hazards and risks

You only have direct responsibility for the food handling duties you are employed to perform – for example:

- Purchasing and receiving food
- Storing food
- Thawing frozen food
- Food preparation activities
- Cooking food

(Continued)

Slide 11

Slide No	Trainer Notes
11.	Trainer informs trainees in practice they will have direct responsibility for the position/work role they are employed in and these specific responsibilities will be explained to them as part of their Induction and Orientation, and as part of the formal on-the-job training provided by the employer. Examples may include responsibilities for: • Purchasing and receiving goods delivered into the premises by suppliers • Dry, cold and frozen storage of food which has been delivered • Thawing of frozen food • Food preparation activities (washing, peeling, chopping, mixing, weighing) food • Cooking food ready for immediate consumption and cooling food which has been cooked so it can be refrigerated or frozen for later use.

Slide

Identify key hazards and risks

- Holding of food
- Reheating previously cooked food
- Displaying food
- Supervising self-serve situations
- Serving food
- Cleaning

Slide 12

Slide No	Trainer Notes
12.	Trainer continues providing examples of the food handling work students may have direct responsibilities for: • Cold holding and hot holding of prepared food so it can be kept ready for sale or service • Re-heating of prepared food where previously prepared food (or left-over food) is safely heated up for service • Displaying hot and cold food for service to customers • Supervising the self-service of food by customers to themselves • Serving food which may packaging food for take-away consumption or plating food for eat-in consumption • Cleaning food equipment, utensils, work areas and food contact surfaces. Class Activity – Guest Speaker Trainer arranges for local health authority to visit and talk to students about: • Obligations/requirements imposed on food handlers by legislation • Safe food handling techniques • Support available to assist with maintaining a safe and hygienic workplace.

Slide

Identify key hazards and risks

At work you will also be expected to:

- Participate in establishment-wide food safety training activities
- Increased awareness for identifying hazards
- Constant vigilance
- Due diligence
- Assist other staff in their food handling and food safety activities
- Seek advice when unsure about what to do
- Effective responses

Slide 13

Slide No	Trainer Notes
13.	Trainer indicates students are also expected to: • Participate in venue-wide food safety • Assist other staff in their designated work roles to identify hazards and address issues • Seek advice and direction from a more experienced and senior person when unsure about what to do in terms of maintaining a safe food handling environment.

Slide

Check own work area

Checking your own work area can involve:

- Inspecting work station prior to starting work
- Adhering to workplace checklists
- Monitoring work activities

(Continued)

Slide 14

Slide No	Trainer Notes
14.	Trainer stresses need for students to check their own work area to identify hazards and risks indicating this can involve: ● Inspecting the work area prior to commencing work: ▪ Food areas, equipment and utensils are clean ▪ No evidence of pests/vermin ▪ Temperatures of refrigerators, cool rooms and freezers are correct ▪ Deliveries have been inspected and stored appropriately and promptly ● Following the requirements of any workplace-specific checklists which may be provided to guide inspections and checking procedures ● Monitoring work on an ongoing basis – to ensure: ▪ Required SOPs and work practices and protocols are being implemented ▪ Food safety is being maintained ▪ Equipment is operating correctly ▪ Required temperatures (for processing and holding and display) are being maintained ▪ Required cooking times for food is being achieved ▪ Cleaning and sanitising of food equipment is occurring in between uses ▪ Cleaning of food areas and food contact surfaces is occurring at least every four hours

	▪ Spills are cleaned up as they occur ▪ Rubbish is being removed regularly ▪ Personal hygiene requirements are being consistently implemented.
--	--

Slide

Check own work area

- Verifying safety of food to be used
- Observing what colleagues do
- Testing equipment

Slide 15

Slide No	Trainer Notes
15.	Trainer continues providing advice as to how students may check their work areas: • Verifying safety of food to be used: ▪ Inspecting for signs/evidence of contamination ▪ Checking use-by date ▪ Ensuring packaging has not been compromised • Observing food handling practices of colleagues – to ensure they also handle food safely and hygienically • Testing equipment – to make sure it is operating correctly. Class Activity – Guest Speaker Trainer arranges for management-level person in a local food handling venue to attend and talk to students about: • Their expectations and requirements regarding activities of food handling • Examples of in-house food safety training • Examples of SOPs to enable/support safe food handling • Requirements of Food safety Plan • Documents used to monitor and record safe food handling practices.

Slide

Check own work area

Be alert to potential for:

- Food contaminated by vermin
- Contaminated items
- Dirty equipment and utensils
- Garbage

(Continued)

Slide 16

Slide No	Trainer Notes
16.	Trainer stresses the need for constant vigilance by all food handlers and presents additional hazards/situations they need to be aware of: • Food contaminated by vermin – through urine, faeces, gnawing, their presence in it • Airborne dust – either due to natural causes (dust storms, weather) or due to internal causes (renovations) • Contaminated items – such as linen, tea towels contaminated with human waste such as blood, secretions (sweat) or food • Dirty equipment and utensils – which can include: ▪ Items not properly cleaned and sanitised after use ▪ Items dropped on the floor ▪ Items contaminated by clothing, coughing/sneezing, or cross contamination of any sort • Garbage – all garbage presents a potential hazard whether it is stored in bins inside the premises or in containers outside the premises: remember hands must be washed after handling garbage and all garbage containers must be kept clean when not in use.

Slide

Check own work area

- Out-of-date food handling practices
- Colleagues who require training
- Equipment not operating as intended

Slide 17

Slide No	Trainer Notes
17.	Trainer continues to present additional hazards/situations they need to be aware of: • Out-of-date food handling practices – hazards can occur where: ▪ The nature of the food operations being undertaken have changed ▪ The food equipment being used has altered ▪ The food items being processed have changed and there is no subsequent and appropriate alteration to the previously existing food handling protocols • Colleagues who require training – even where staff have undertaken an approved food safety course there is no guarantee they will apply, in the workplace, the lessons they have learned: where workers are using incorrect food service practices and/or failing to observe other safe food handling principles (especially in relation to personal hygiene, hand washing) there is a need for re-training • Equipment not operating as intended – this typically includes all food processing and holding equipment (especially refrigerators/cool rooms, freezers, food warmers and bain-maries) as well as food thermometers.

Slide

Check own work area

Keys in responding to threats (hazards and risks):

- Awareness
- Constant vigilance
- Quick and effective response
- Record in log book
- Immediate reporting

Slide 18

Slide No	Trainer Notes
18.	Trainer explains appropriate action to take in response to situations will depend on the hazard identified and more detailed responses are provided on later slides but at this stage it is important to realise keys in responding to these threats are: • Awareness – of what causes problems and poses hazards and risk: which is why safe food handling training is important • Constant vigilance – of what is happening (or not happening) in the workplace • Quick and effective responses – where you are able to act effectively in accordance with the scope of authority for your job • Immediate reporting – to (for example) supervisor, chef, manager or owner where you identify non-compliance with safe food handling requirements and any out-of-control situations.

Slide

Summary – Element 1

When identifying hazards and risks:

- Use personal observation
- Gain experience to help provide a basis for analysing what is occurring
- Read workplace food safety records to determine what is happening

(Continued)

Slide 19

Slide No	Trainer Notes
19.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Summary – Element 1

- Undertake regular and required workplace inspections and checks
- Be alert to the potential for microbiological, chemical and physical contamination
- Pay special attention to high risk food handling situations

(Continued)

Slide 20

Slide No	Trainer Notes
20.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Summary – Element 1

- Focus on the food handling area and activities for which you have direct responsibility
- Be prepared to assist in venue-wide safe food handling initiatives and requirements
- Ask for help, advice and direction when not sure about what to do

(Continued)

Slide 21

Slide No	Trainer Notes
21.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Summary – Element 1

- Apply checking procedures to verify safe food handling protocols are being applied
- Protect food from contamination
- Take appropriate remedial action where necessary
- Report instances of non-compliance and out-of-control situations

Slide 22

Slide No	Trainer Notes
22.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Follow enterprise hygiene standards, procedures and practices

Performance Criteria for this Element are:

- Implement required personal hygiene practices
- Maintain clothing to meet work area standards
- Follow hygiene procedures in accordance with enterprise requirements

Slide 23

Slide No	Trainer Notes
23.	Trainer identifies for trainees the Performance Criteria for this Element, as listed on the slide. Class Activity – Discussion Trainer asks trainees questions about following enterprise food hygiene standards, procedures & practices by asking questions such as: • What do you might be workplace food safety standards, procedures and practices? • Why have they been developed? • What are examples of standard/required personal hygiene practices for food handlers? • Why is it important to adhere to them? • How do you learn what they are? • What happens if you do not follow them?

Slide

Implement required personal hygiene practices

Necessary personal hygiene practices for food handlers:

- Have a shower before work
- Wash hands using the standard procedure
- Avoid touching cooked or ready-to-eat food with bare hands
- Avoid touching food surfaces with bare hands
- Do not wear jewellery on hands or wrists
- No wearing of wrist watch on duty
- Control facial hair

(Continued)

Slide 24

Slide No	Trainer Notes
24.	Trainer introduces and explains the importance of personal hygiene presenting personal hygiene practices which minimise the possibility of food contamination: • Avoid touching cooked and/or ready-to-eat food with the bare hands – use tongs, a spatula, fork, serving spoon or gloves • Avoid touching food <i>surfaces</i> with the bare hands – this means avoiding touching preparation benches, preparation equipment and the food contact surfaces of serving items (plates, cutlery, glasses, cups) • No jewellery to be worn on hands and wrists – food can lodge in the jewellery, deteriorate and then fall back into food ▪ There is also a chance stones/gems may fall out into the food providing a physical food contaminant ▪ If you must wear a ring then cover it using a coloured band-aid and glove • Facial hair must be kept neat and controlled – hair should either be covered or sprayed to keep it controlled in such a way that hairs do not fall into food ▪ Long hair must be tied back (this is applicable to waiting staff as well as food preparation and food service staff), and beards should also be covered with a snood. In kitchens, hair nets or hats should be worn.

Class Activity – Presentation and Demonstration

Trainer shows students examples of:

- Tongs
- Spatula
- Service fork
- Serving spoon
- Disposable gloves
- Hair net/cap
- Beard snood.

Trainer demonstrates correct procedure for:

- Controlling hair
- Wearing hair net/cap and beard snood.

Slide

Implement required personal hygiene practices

- Have short, clean fingernails
- Wear clean clothes
- No smoking or betel in food areas
- Stay away from work when ill

(Continued)

Slide 25

Slide No	Trainer Notes
25.	Trainer continues presenting personal hygiene requirements for food handlers: • Fingernails must be short, clean and free of polish (including clear nail polish) – cracked fingernails and chipped nail polish can harbour bacteria and may also flake off into food ▪ Fingernail decorations and artificial nails are also prohibited • Clothing must be clean – a minimum requirement is for clean clothes for each shift with further changes as spillages and 'working dirt' dictate ▪ It is not permitted to wear 'food handling' clothes to and from work • Refraining from smoking or chewing tobacco in any food area – it is also a good idea to put up 'No Smoking' posters and to remove ash trays from these areas • Staying away from work when suffering cold or flu symptoms – and obtaining a doctor's certificate stating that as a food handler it is safe to return to work.

Slide

Implement required personal hygiene practices

- Doctor's certificate required to return to work after suffering a communicable disease
- No spitting in food areas
- Do not taste food with spoon and replace spoon into food
- Consider wearing a sweat band

(Continued)

Slide 26

Slide No	Trainer Notes
26.	Trainer continues presenting personal hygiene requirements for food handlers: • Food handlers with any communicable disease must not deal with food until they receive a certificate from a doctor stating as a food handler they are cleared to work with food • Refraining from spitting in any food area • Avoiding tasting of food with a spoon and then returning the utensil to the food • Wearing a sweat band – or mopping areas that sweat and then thoroughly washing hands (to prevent sweat falling into food).

Slide

Implement required personal hygiene practices

- Cover cuts and sores on hands and fingers
- Do not blow into a bag with your breath (to open the bag)
- Do not lick your fingers to separate wrapping paper for food
- Do not touch any body opening
- Wash hands properly when required

Slide 27

Slide No	Trainer Notes
27.	Trainer continues presenting personal hygiene requirements for food handlers: • Covering all cuts and sores on hands and fingers with approved (coloured) waterproof dressings and bandages – and adding a finger stall and/or disposable glove, as appropriate • Not blowing with the breath into a bag to be used to wrap food • Not wetting fingers to assist with separating sheets of wrapping paper when packaging take away foods • Not touching anybody opening – such as ears, eyes, nose: thorough hand washing must occur if this happens • Hands must be washed properly – and washed when required (more information and demonstration on later slides).

Slide

Implement required personal hygiene practices

Eating food in food preparation areas:

- Do not eat food over or above unprotected surfaces
- Do not eat food over or above unprotected food
- House policies may ban eating food in food prep areas
- House policies may ban all people eating food over or above unprotected surfaces or food

Slide 28

Slide No	Trainer Notes
28.	Trainer talks about food handlers eating food in food preparation areas stating there is no law forbidding staff from eating in food areas but they must: • Not eat any food over an unprotected food surface – such as food preparation equipment, preparation benches, serving equipment or crockery, cutlery or glassware • Not eat any food over any unprotected food – this applies to raw food, ready-to-eat food or any food that is not covered, wrapped or packaged so that it cannot become contaminated through food falling onto it • Note individual premises may have house policies forbidding the consumption of food while working • Note also the above requirements in relation to eating over unprotected food and unprotected food surfaces applies to anyone on the premises – including members of the public, customers and visitors.

Slide

Implement required personal hygiene practices

Action to take:

- If a food surface is **known or suspected** of being contaminated it must be **cleaned and sanitised**
- If food is **known or suspected** of being contaminated it must be **thrown out**

Slide 29

Slide No	Trainer Notes
29.	Trainer identifies action to take such as: • Where it is <i>known or suspected</i> a food surface has been contaminated by coughing, sneezing or any other unsafe practice (such as anything giving rise to cross contamination) the surface must be cleaned and sanitised before being used/re-used • Where it is <i>known or suspected</i> unprotected food has been contaminated by coughing, sneezing or any other unsafe practice (such as anything giving rise to cross contamination) it must be discarded • Any food that is known to be contaminated, or suspected of being contaminated, must be disposed of as garbage – it must not be given away to customers, staff or any organisation.

Slide

Implement required personal hygiene practices

Food handlers must wash hands:

- Any time they may be a source of contamination:
 - After handling garbage, animals or money
 - After undertaking cleaning duties
 - After taking delivery of food
 - In between handling raw and cooked or ready-to-eat food

(Continued)

Slide 30

Slide No	Trainer Notes
30.	Trainer highlights the importance of food handlers washing their hands properly stating they must wash their hands: • Any time the hands are likely to be a source of contamination – this can cover a wide range of possible circumstances and it is impossible to identify them all but the following is a representative list: ■ After handling rubbish/garbage and before handling food or food contact surfaces ■ After undertaking cleaning duties and before handling food or food contact surfaces ■ After handling animals and before handling food or food contact surfaces ■ After changing a baby's nappy and before handling food or food contact surfaces ■ After accepting a delivery of food into the premises and before handling food or food contact surfaces ■ After handling money and before handling food or food contact surfaces ■ In between handling raw high risk food (meat, fish or chicken) and handling other foods such as cooked and/or ready-to-eat food.

Slide

Implement required personal hygiene practices

- Before they start work
- Immediately after:
 - Smoking
 - Coughing or sneezing
 - Using handkerchief or tissue
 - Eating or drinking
 - Touching the body

(Continued)

Slide 31

Slide No	Trainer Notes
31.	Trainer continues to identify when food handlers need to wash their hands: • Before they start their food handling duties – this means food handling staff must wash their hands when they arrive at work even though they may have showered, bathed or washed their hands at home before coming to work • Immediately after engaging in nominated activities which have proved to be associated with bacterial transfer/cross contamination. The nominated activities include: ■ Smoking – including using tobacco products ■ Coughing or sneezing ■ Using a handkerchief or nasal tissue – which includes blowing the nose ■ Eating or drinking ■ Touching hair, scalp, mouth, nose, ears, anybody opening or any wound.

Slide

Implement required personal hygiene practices

- After any 'absence from the workstation' – for example:
 - Taking a delivery
 - Answering the telephone
 - Undertaking any work which is not food handling
- After using the toilet

Slide 32

Slide No	Trainer Notes
32.	Trainer continues to identify when food handlers need to wash their hands: • After any absence from the work station – this means every time a food handler leaves the kitchen (or other place where they are handling food) they must wash their hands on their return to work and before they handle food. These absences from the work station may involve or be caused by: ■ Leaving the kitchen to accept a delivery of food ■ Taking a phone call ■ Undertaking any work which is not related to food handling • Immediately after using the toilet and before handling food or food contact surfaces – this applies to all instances where the toilet was used and includes a requirement to wash hands after urination as well as after defecation.

Slide

Implement required personal hygiene practices

Regulations regarding hand washing facilities:

- Must be supplied with hot water and soap
- Should have a nail brush
- Sinks or basins for hand washing must not be used for food
- Food sinks must not be used for hand washing
- Should be an adequate size
- Must have proper hand drying facilities
- Have a waste bin provided

Slide 33

Slide No	Trainer Notes
33.	Trainer explains requirements regarding provision of hand washing facilities: ● Be supplied with a continuous supply of warm running, potable water – the accepted temperature of this water is 40°C ● Be supplied with soap – most premises use bulk soap dispensers dispensing liquid anti-bacterial soap: ▪ The use of bars of soap is to be avoided as the soap can transfer bacteria ● Only be used for washing hands, arms and face – the wash hand basins must not be used for other purposes such as food preparation or as a 'slop' sink ● Signage must indicate these wash hand basins are for the sole purpose of hand washing ● Sinks in the kitchen/food preparation area used for other purposes (washing food; cleaning pots and pans) must not be used for hand washing ● Be of an appropriate size to enable the effective washing of hands ● Be supplied with appropriate means of drying the hands – this can be single use (paper) towels and hot air dryers: ▪ It is not acceptable for a business to provide only a hot air dryer ▪ Re-usable towels can be used provided they are washed and dried after every use – this is extremely unlikely to happen in most businesses so the preferred option is to use paper/disposable towel ● Be supplied with a bin – for disposing of used disposable towels ● A nail brush should also be supplied so cleaning under the fingernails can occur.

Slide

Implement required personal hygiene practices

Procedure for hand washing:

- Rinse off visible dirt
- Apply soap
- Wash for 20 seconds
- Rinse
- Dry

Slide 34

Slide No	Trainer Notes
34.	Trainer explains hand washing requirements are food handlers 'thoroughly clean' their hands, meaning they must: ● Rinse off visible and easy to remove dirt ● Apply soap/detergent ● Wash hands for at least 20 seconds: ▪ Thoroughly and vigorously massage the soap into the folds and creases of the hands and wrists ▪ Clean under the fingernails ● Rinse soap from hands ● Thoroughly dry hands – the preferred method of drying hands is to: ▪ Shake off excess water ▪ Dry with paper towel ▪ Finish with hot air dryer. Class Activity 1 – Demonstration and Practical Trainer demonstrates correct procedure for food handlers to wash and dry their hands and provides opportunity for students to practice same. Class Activity 2 – Use of UV light kit (demonstration) Trainer uses UV light kit to demonstrate the need for proper hand washing (following instructions provided in the kit).

Slide

Maintain clothing

Clothing requirements for food handlers:

- Must be clean
- Does not provide a source of contamination
- Must be changed when dirty
- Protective clothing must be removed before visiting the toilet

(Continued)

Slide 35

Slide No	Trainer Notes
35.	Trainer explains food establishments may require staff to wear a nominated uniform or other personal protective equipment or clothing highlighting the following requirements apply: • Uniform and protective clothing and equipment worn/used by food handlers must be clean – dirty clothing may directly or indirectly contaminate food and/or food preparation equipment or surfaces • Food handlers are legally obliged to ensure their clothing does not contaminate food or food-related equipment, utensils or surfaces • Clothing that becomes dirty and a risk to food must be changed – you should take into account the nature of the work being performed when making a judgement about the state of your clothes. ▪ For example, a cook dealing with raw meat and blood can be expected to have dirtier clothes than a counter-hand making sandwiches or serving prepared food • Outer clothing needs to be changed when it has become soiled as a result of handling exposed (that is, not packaged) high risk raw food and there is then a need to handle exposed ready-to-eat food • Protective clothing such as aprons, overalls, hats, gloves and other outer protective clothing/equipment should be removed before visiting the toilet.

Slide

Maintain clothing

- Avoid loose-fitting clothes
- Wear clean clothes daily
- Have a change of clothes at work
- Do not wear food handling clothes when going to and from work

(Continued)

Slide 36

Slide No	Trainer Notes
36.	Trainer continues providing requirements for food handler clothing: • Avoid loose-fitting clothes – they increase chance of clothing dragging into food and posing a contamination threat • Wear clean clothes to work daily • Have a change of clothes available at work • Do not wear food handling clothes to and from work.

Slide

Maintain clothing

- Wear an apron
- Make sure buttons are not loose
- Fasten brooches and name tags securely
- No rings or watches

(Continued)

Slide 37

Slide No	Trainer Notes
37.	Trainer continues providing requirements for food handler clothing: • Wear protective clothing such as aprons • Ensure buttons on food handling clothes are not loose – or they may fall off and drop into food presenting a physical hazard • Avoid adding brooches, name tags, clips, pins to clothes – unless they are securely fastened and unable to fall off • Avoid rings and watches on hands and wrists: ▪ Even plain, banded rings can cause a potential food poisoning source and gloves should be when handling food if these are worn.

Slide

Maintain clothing

- No ear-rings
- Avoid fiddling with jewellery
- No hair clips or hair pins
- Wear a hair net or hat

Slide 38

Slide No	Trainer Notes
38.	Trainer continues providing requirements for food handler clothing: • Do not wear ear-rings – ear-rings that dangle are the worst but not wearing them at all is preferable. ▪ Sleepers may be acceptable in some venues but check house rules first • Avoid fiddling/playing with jewellery – especially ear-rings in pierced ears • Avoiding wearing hair clips • Avoiding using hair pins ▪ Ensuring anything worn in the hair is securely fastened in place • Wearing a hair net or hat to guard against items falling out of the hair and into food or into food preparation equipment or onto food preparation surfaces.

Slide

Follow hygiene procedures

Cross contamination:

- Bacteria depend on humans to transfer them from place to place
- Transfer can occur through:
 - Direct contact
 - Indirect contact

Slide 39

Slide No

Trainer Notes

39.

Trainer introduces concept of cross contamination.

- All food handlers must be aware of the concept of cross contamination
- Cross contamination is the contamination of food (or food preparation surfaces, equipment etc.) with bacteria, chemicals or allergens as a result of contact with a contaminated source
- Bacteria cannot fly, jump or hop so they depend on people to move them around from place to place via direct contact or through indirect contact
- Cross contamination may occur via direct or indirect contact.
 - Direct contact:
 - Using a knife to cut raw meat and then using the same knife to cut cooked, ready-to-eat meat without cleaning and sanitising the knife in between tasks – the blood and residual meat on the knife will carry bacteria and this will be transferred by the knife to the previously safe cooked, ready-to-eat meat
 - Using a chopping board to cut raw chicken and then using the same chopping board to cut cooked meat for salads without cleaning and sanitising the board in between tasks – the chopping board will carry bacteria from the uncooked chicken (the cooking process should destroy the bacteria) which will then be transferred to the previously safe to eat cooked meat
 - Indirect contact:
 - As previously explained this involved coughing or sneezing into a hand and then using that hand to prepare/touch food or to touch a food preparation surface.

Slide

Follow hygiene procedures

Practices to prevent cross contamination:

- Clean and disinfect food preparation areas and equipment
- Careful avoidance of meat contaminated with salmonella and pathogens
- Extreme care in preparing raw food
- Institutional dish sanitizing with soap and clean water
- Washing of hands thoroughly before touching food

Slide 40

Slide No	Trainer Notes
40.	• Trainer presents a range of techniques/practices used in the workplace to help food handlers prevent cross contamination • Trainer to discuss importance of these points.

Slide

Follow hygiene procedures

Practices to prevent cross contamination:

- Avoid using the same utensils for other food
- Avoid using utensils that have been licked.
- Observe proper storage of food
- Practice appropriate refrigeration of food
- Label food to indicate the life span of food
- Proper disposal of uneaten food and packed or canned food stuff

Slide 41

Slide No	Trainer Notes
41.	• Trainer presents a range of techniques/practices used in the workplace to help food handlers prevent cross contamination • Trainer to discuss importance of these points.

Slide

Follow hygiene procedures

Practices to prevent cross contamination:

- Using different staff to handle raw food and cooked or ready-to-eat food
- Washing and sanitizing items between uses
- Using color-coded chopping boards
- Implementing all personal hygiene protocols

(Continued)

Slide 42

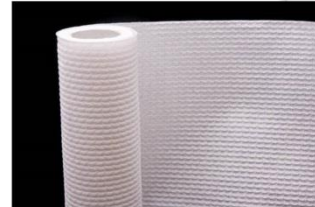

Slide No	Trainer Notes
42.	Trainer presents a range of techniques/practices used in the workplace to help food handlers prevent cross contamination: • Using separate staff to handle raw high risk food and other food that is cooked and/or ready-to-eat • Washing and sanitising all preparation surfaces, equipment and utensils in between each use • Using colour-coded chopping boards • Ensuring proper personal hygiene practices are implemented. Class Activity – Presentation Trainer presents trainees with samples of: • Colour-coded chopping boards • Posters instructing use of different coloured boards for different foods – such as: ▪ White – for dairy products only ▪ Red – for raw meat only ▪ Blue – for seafood only ▪ Yellow – for poultry only ▪ Brown – for cooked meat only ▪ Green – for fruit and vegetables only.

Slide

Follow hygiene procedures

- Separating chemicals from food
- Using clean containers for food storage
- Using clean items for service of food
- Using disposable paper towels

(Continued)

Slide 43

Slide No	Trainer Notes
43.	Trainer continues presenting a range of techniques/practices used in the workplace to help food handlers prevent cross contamination: • Keeping chemicals away from food and food preparation/service areas – this includes eliminating the use of chemicals in food areas when food is present • Using cleaned and sanitised containers for every food preparation and storage requirement – this applies to all storage, preparation or display environments • Using only cleaned and sanitised crockery, cutlery and glassware for the service of food and drinks – this includes ensuring all service items are properly stored after cleaning to protect them from contamination • Using only disposable (paper) towels for wiping hands or cleaning up spills and immediately discard after use – do not use clothing (such as fronts of jackets, aprons) or cloth tea towels.

Slide

Follow hygiene procedures

- Storing raw food below cooked or ready-to-eat food
- Never storing food on the floor
- Only using designated hand washing sinks for washing hands
- Cleaning and sanitising food thermometers between uses

(Continued)

Slide 44

Slide No	Trainer Notes
44.	Trainer continues presenting a range of techniques/practices used in the workplace to help food handlers prevent cross contamination: • Never storing raw high risk food above cooked and/or ready-to-eat food – to eliminate the risk posed by blood/juice dripping onto raw food below • Never storing food containers on the floor • Using hand wash sinks only for hand washing – and not using food preparation sinks for hand washing • Cleaning and sanitising probe thermometers in between each use. Class Activity – Demonstration Trainer demonstrates how to clean and sanitise a probe thermometer using a sanitising wipe.

Slide

Follow hygiene procedures

- Cleaning low-risk areas before cleaning high-risk areas
- Washing fruit and vegetables in sanitizing solution
- Wearing clean clothes
- Implementing requirements of cleaning schedules

(Continued)

Slide 45

Slide No	Trainer Notes
45.	Trainer continues presenting a range of techniques/practices used in the workplace to help food handlers prevent cross contamination: ● Cleaning low risk areas and equipment before cleaning high risk areas when the same cleaning items/equipment have to be used ● Washing all fruit and vegetables, especially salad vegetables, in a sanitising solution before use ● Wearing clean clothes and clean protective clothing for each shift ● Cleaning and sanitising food equipment, utensils and preparation areas in accordance with the cleaning schedule for the premises – including the cleaning and sanitising of preparation benches in between preparing raw high risk food and other foods. Class Activity 1 – Demonstration Trainer shows class how to wash fruit and vegetables in sanitising solution prior to use. Class Activity – Handout Trainer distributes and discusses sample cleaning schedule.

Slide

Follow hygiene procedures

- Using waterproof bandages and colored band aids
- Following correct hand washing protocols
- Separating storage of raw and cooked or ready-to-eat foods
- Covering foods

(Continued)

Slide 46

Slide No	Trainer Notes
46.	Trainer continues presenting a range of techniques/practices used in the workplace to help food handlers prevent cross contamination: • Using waterproof bandages and dressings on cuts and sores • Washing – and properly drying – hands when and as required • Separating the storage of raw and cooked/ready-to-eat foods – by storing (for example) in different areas of the refrigerator and/or on separate trays • Keeping foods covered as much as possible when in storage, while being processed and displayed. Class Activity – Presentation Trainer distributes samples of: • Water proof bandages/dressings • Coloured band aids which should be used by food handlers.

Slide

Follow hygiene procedures

- Using separate sinks for different food-related activities
- Changing disposable gloves as required
- Never mixing batches of food
- Not replacing tasting spoons into food

(Continued)

Slide 47

Slide No	Trainer Notes
47.	Trainer continues presenting a range of techniques/practices used in the workplace to help food handlers prevent cross contamination: • Using separate sinks for washing ready-to-eat salad vegetables/vegetables and other high risk foods – this includes a requirement a sink used for thawing high risk foods by running it under cold water should take place in a different sink to the one used for washing salad vegetables/vegetables • Changing disposable gloves whenever there would be a need to wash hands – such as in between handling raw high risk food and cooked/ready-to-eat food: gloves should be changed every hour regardless • Not mixing batches of food • Refraining from tasting food and replacing the spoon back in the pot.

Slide

Follow hygiene procedures

- Not coughing or sneezing over food and food surfaces
- Cleaning and sanitizing knives in between use on raw and cooked or ready-to-eat foods
- Cleaning and sanitizing prep benches every 4 hours
- Separating kitchen cleaning equipment from items used to clean other areas

(Continued)

Slide 48

Slide No	Trainer Notes
48.	Trainer continues presenting a range of techniques/practices used in the workplace to help food handlers prevent cross contamination: • Not coughing or sneezing over food or food preparation equipment, utensils or surfaces • Cleaning and sanitising knives in between cutting raw high risk foods and cooked/ready-to-eat foods • Cleaning and sanitising food preparation benches and equipment that are in constant use at least every four hours • Avoiding the use of the same cleaning equipment between other areas of the premises (such as bathrooms and bedrooms) and the kitchen.

Slide

Follow hygiene procedures

- Making immediate repairs to food areas when required
- Excluding pests, vermin and animals from food prep areas
- Discarding food known to be, or suspected of being, contaminated
- Excluding sick employees from food handling activities
- Using workplace signage about preventing cross contamination

(Continued)

Slide 49

Slide No	Trainer Notes
49.	Trainer continues presenting a range of techniques/practices used in the workplace to help food handlers prevent cross contamination: ● Repairing cracked surfaces in the food preparation area ● Excluding pests and implementing an effective pest control program – which may necessitate the use of a qualified professional external pest control company ● Discarding all food that is known to be contaminated – or suspected of being contaminated ● Excluding food handlers who are ill from food handling and food-related activities ● Putting up signs/posters in the workplace to remind food handlers about cross contamination. Class Activity – Small Group Exercise Trainer asks trainees to prepare posters suitable for placement in the work area which: ● Advise staff of personal hygiene requirements ● Advise staff on safe food handling practices ● Inform patrons at self-serve buffets regarding safe food handling practices to be implemented at the buffet.

Slide

Follow hygiene procedures

- Protecting displayed food from contamination
- Discarding all food dropped on the floor
- Throwing out food returned on plates
- Not re-using single-use items once
- Inspecting food delivery vehicles

Slide 50

Slide No	Trainer Notes
50.	Trainer continues presenting a range of techniques/practices used in the workplace to help food handlers prevent cross contamination: • Displaying food so it is protected from contamination by customers – including the use of sneeze guards, monitoring patron actions where self-service food is available and taking appropriate action when the potential for cross contamination to have taken place has been identified • Disposing of any food dropped on the floor • Disposing of any food returned from a patron – this includes food and beverage items • Disposing of any single-use item which has been used once and/or has become contaminated (or is suspected of being contaminated) for any reason – more information on later slides • Inspecting food deliveries into the premises to ensure they are not contaminated by any visible sources. Class Activity – Presentation Trainer shows class examples/samples of single-use items. • Take-away food and drink containers • Drinking straws • Disposable gloves • Plastic cutlery • Food wrappers – around items such as hamburgers and other take-away menu items.

Slide

Follow hygiene procedures

Ways to prevent direct contact with ready-to-eat foods:

- Wearing disposable gloves
- Using utensils
- Using paper

Slide 51

Slide No	Trainer Notes
51.	Trainer informs students on practical measures to prevent direct contact with ready-to-eat foods: • Wearing disposable gloves – and changing them as required (see following slides) • Using utensils (tongs, spatulas, forks, spoons) instead of bare hands to handle ready-to-eat food • Using paper (tissue/packaging materials for take-away food) to act as a barrier between ready-to-eat foods and bare hands. Class Activity – Demonstration Trainer demonstrates the practices identified on the slide for preventing direct contact between hands and foods.

Slide

Follow hygiene procedures

Use disposable gloves when handling food:

- Replace when torn
- Change in between handling raw high-risk food and cooked or ready-to-eat food
- Change every hour
- Change if they are used to handle money

(Continued)

Slide 52

Slide No	Trainer Notes
52.	Trainer instructs trainees on the use of disposable gloves by food handlers stating: • The use of protective, disposable gloves in food handling is an excellent safe food handling practice but gloves do not/cannot fix all food hygiene problems and requirements relating to the use/wearing of disposable gloves include: ▪ Change gloves immediately they are ripped/torn ▪ Change gloves between handling raw high-risk food and cooked, ready-to-eat foods ▪ Change gloves every hour regardless ▪ If handling money do not use gloved hand to handle food.

Slide

Follow hygiene procedures

- Do not remove over or above food
- Do not re-use disposable gloves
- Do not turn inside-out and wear again
- Change whenever they become contaminated
- Change gloves whenever you would have a need to wash hands

Slide 53

Slide No	Trainer Notes
53.	Trainer continues to instruct trainees on the use of disposable gloves by food handlers: • If changing gloves during service ensure they are not taken off over food/food surfaces if the gloves contain powder as the powder may provide a source of contamination • Do not try to put on gloves that have already been used • Do not turn gloves inside out and try to wear them again • Change gloves whenever they become contaminated from whatever source – raw food, blood, sneezing, chemicals, scratching the face, handling rubbish • Whenever required to wash hands, gloves should be changed.

Slide

Follow hygiene procedures

Single-use items:

- Must not be used more than once
- Must be stored to protect against contamination
- Must not be used if contaminated
- Must be 'clean'

Slide 54

Slide No	Trainer Notes
54.	Trainer re-visits single-use items stating: ● Must not be used more than once by the business – customers are free to re-use them at home as they see fit ▪ Note single-use containers may, however, be used for non-food activities – such as collecting or storing dirty cutlery ● Must be stored and/or displayed so as to be protected from contamination – this contamination may be from: ▪ Flies, pests and vermin ▪ An infected food handler ▪ Airborne contamination ▪ Physical contamination ▪ Customers ● Must not be used if it has been contaminated – or there is a suspicion it may have been contaminated. This may mean: ▪ Disposing of any single-use items handled by customers ▪ Disposing of any single-use items which have been dropped on the floor ▪ Disposing of any single-use items where the protective packaging they were delivered in has been compromised ● Must be clean in order for it to be safely used – meaning free from visible contamination of any sort (including food).

Slide

Follow hygiene procedures

Practical action related to single-use items:

- Do not 'build' or prepare in advance
- Use proper containers to dispense drinking straws
- Store take-away containers upside down

(Continued)

Slide 55

Slide No	Trainer Notes
55.	Trainer provides practical measures in relation to single-use items include: • Not preparing take-away containers (for example, pizza boxes) in advance and leaving them 'open' – this allows airborne and other contamination to settle inside the boxes on the food contact area: pizza boxes should be constructed 'to order' • Providing drinking straws in containers to allow one straw at a time to be dispensed without others in the container being touched: an alternative is to only use individually wrapped drinking straws • Storing take-away food containers (for food and beverages) upside down – so the food contact surface of the container is not exposed.

Slide

Follow hygiene procedures

- Store take-away lids for containers safely
- Cover or wrap take-away cutlery
- Use wrapped toothpicks
- Dispose of damaged PC units

Slide 56

Slide No	Trainer Notes
56.	Trainer continues providing practical measures in relation to single-use items: • Storing the lids to take away containers safely – so that the side that makes contact with the drink/food is protected • Disposable cutlery should be kept covered or individually wrapped • Toothpicks should be individually wrapped • Disposing of any portion control units which have been damaged or already handled by customers. Class Activity – Presentation and Demonstration Trainer: • Presents examples of containers which can be used to safely provide drinking straws to customers • Presents sample PC units/products • Demonstrates correct storage of take-away containers, lids and cutlery.

Slide

Summary – Element 2

When following enterprise hygiene standards, procedures and practices:

- Implement all necessary personal hygiene practices
- Wash hands properly and when required
- Use and wear PPE as required
- Avoid cross contamination

(Continued)

Slide 57

Slide No

Trainer Notes

57.

Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Summary – Element 2

- Consider using colour-coded chopping boards
- Prevent unnecessary direct contact with ready-to-eat food
- Use disposable gloves
- Do not re-use single serve items

Slide 58

Slide No	Trainer Notes
58.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Handle and store foodstuffs

Performance Criteria for this Element are:

- Handle and store foodstuffs according to enterprise guidelines ✓
- Handle and store foodstuffs in a manner that avoids damage and contamination, meets hygiene standards and maintains quality ✓
- Store foodstuffs at the correct temperature ✓

Slide 59

Slide No	Trainer Notes
59.	Trainer identifies for trainees the Performance Criteria for this Element, as listed on the slide. Class Activity – Discussion Trainer asks trainees questions about handling and storing foodstuffs by asking questions such as: • What guidelines do you think venues have regarding the safe and effective storage of food? • Why is it important to store food correctly? • What do you think are correct food storage requirements for dry food, refrigerated food and frozen food? • What do you think is meant by the term 'Temperature Danger Zone'?

Slide

Handle and store food according to enterprise guidelines

There are three storage options for food:

- Dry goods storage
- Refrigerated goods storage
- Frozen goods storage

Slide 60

Slide No	Trainer Notes
60.	Trainer identifies the three storage options for food explaining details will be provided on following slides: • Dry goods storage • Refrigerated goods storage • Frozen goods storage.

Slide

Handle and store food according to enterprise guidelines

Basic food storage requirements:

- Use food grade storage equipment
- Cover food
- Rotate stock
- Keep areas clean
- Never store food on the floor
- Prevent pest infestation

‘Beverages’ are ‘food’.

Slide 61

Slide No	Trainer Notes
61.	Trainer explains basic/standard safe food handling requirements in relation to food storage are: • Use food grade materials to store food susceptible to contamination – such as stainless steel • Cover food that is in storage to protect it from contamination • Rotate stock to ensure it is used in the correct sequence – the method used for most food is called ‘First In, First Out’: any food exceeding its use-by date must be thrown out (more on later slides) • Keep all storage areas and equipment clean • Never store food (including packaged food) directly on the floor – use shelves or stack on pallets • Ensure pests and rodents are excluded from food storage areas (more on later slides) – conduct a regular (at least weekly inspection to check this, and take appropriate action when evidence of pests or rodents is discovered). Trainer advises students ‘beverages’ are regarded as ‘food’ and all safe food handling protocols for food apply equally to beverages/drinks.

Slide

Handle and store food according to enterprise guidelines

- Make sure someone is available to receive all deliveries
- Check food temperature
- Check packaging and labels
- Store food promptly after delivery

Slide 63

Slide No	Trainer Notes
62.	Trainer presents safe food handling requirements in relation to food receipt: ● Inspect the deliveries – the FSP may require a visual inspection of a set number of deliveries (such as 5%) to make sure: ▪ The food is free from visible contamination – for example: – Frozen food is hard frozen – Packaging and wrapping is not torn – The integrity of tins, bottles and other containers has not been compromised – There are no leaking food containers ▪ The delivery does not bring in pests or rodents ▪ The use-by dates of the food are acceptable – reject any food delivered beyond its use-by date or where it is believed it will not be able to be used before it reaches its use-by date ● Inspect the food delivery vehicle – check it is clean and is a dedicated food delivery vehicle ● Check the practices of the delivery driver – check things such as: ▪ Whether or not food is protected during the delivery process – is the delivery vehicle left unlocked during deliveries? (It should be locked to prevent unauthorised entry) Is food placed on the footpath? (It should not be) Are there chemicals mixed in with the food items? (No chemicals should be with the food delivered) ▪ Personal hygiene of the delivery driver.

Slide

Handle and store food according to enterprise guidelines

- Make sure someone is available to receive all deliveries
- Check food temperature
- Check packaging and labels
- Store food promptly after delivery

Slide 63

Slide No	Trainer Notes
63.	Trainer continues presenting safe food handling requirements in relation to food receipt: • Ensure someone is at the premises to receive the food – deliveries should not be left at the premises unattended as this raises the possibility of contamination (from birds, dogs, cats) as well as potential for theft • Check the temperature of the food in accordance with the requirements of the FSP using a properly calibrated thermometer (see section 3.3): ▪ Frozen food should be hard frozen with no evidence of defrosting: -15°C is the recommended temperature ▪ Hot food that is 'potentially hazardous' must be at 60°C or above ▪ Potentially hazardous refrigerated food must be at 5°C or below ▪ Potentially hazardous food may be accepted where the delivery driver can demonstrate (that is, prove to your satisfaction) the combination of time and temperature have not adversely impacted on food safety. In general terms, if the food has been in the Temperature Danger Zone for 2 hours or longer the food should be rejected ▪ When accepting a delivery of potentially hazardous food that is in the Temperature Danger Zone, it should be used first/immediately and not be subject to the standard stock rotation principle of First In, First Out • Check all packaged food is properly labelled with the name of the supplier, manufacturer or vendor – all food delivered into a food premises must be able to be identified so as to assist with food recalls and to help identify the source of problems/contamination where an outbreak of food poisoning occurs

- Store all deliveries as soon as possible after they have been delivered and checked – never leave refrigerated or frozen food lying around in the receival area.

Class Activity – Demonstration and Practical

Trainer demonstrates how to use a food thermometer (probe type) to take the temperature of refrigerated, frozen and hot food.

Trainer provides opportunity for students to practice doing the same, and checks their technique and accuracy of readings.

Slide

Handle and store food according to enterprise guidelines

'Potentially hazardous' food:

- Also known as 'high-risk' food
- Must be stored under temperature-controlled conditions
- Range of these foods is potentially endless
- High-risk food is mainly
 - High in protein and moisture
 - Low acid

Slide 64

Slide No

Trainer Notes

64.

Trainer introduces concept of 'potentially hazardous food' stating:

- Potentially hazardous food is food that must be stored under special temperature conditions (out of the Temperature Danger Zone - see later slide) to prevent the growth of food poisoning bacteria or to prevent the formation of toxins in the food
- The list of potentially hazardous food (also known as 'high risk' food and/or 'potentially dangerous' food) is really without end but focuses on high protein, high moisture, low acid foods.

Slide

Handle and store food according to enterprise guidelines

Potentially hazardous foods include:

- Milk, milk products, cheese
- Eggs and egg products
- Meat and poultry – all types; all cuts
- Smallgoods
- Processed meat products
- Fish, shellfish and seafood
- Pizza, prepared meals, filled sandwiches and rolls, cooked rice and pasta

Slide 65

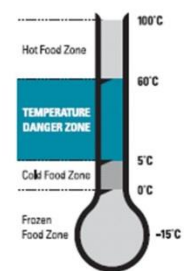

Slide No	Trainer Notes
65.	Trainer provides examples of potentially hazardous foods: • Milk and milk products, soft cheeses – butter, yoghurt, custards, cream cakes, cheese, baked custard tarts and dips • Egg products – quiche, fresh pasta, duck and game bird eggs, all eggs, mayonnaise (whole egg) • Meat and poultry – all types of meat (beef, lamb, pork, chicken, turkey) and all cuts (sides, loins, steaks, chops, ribs, mince) • Smallgoods products – ham, pressed chicken, but note most salami is not a high risk food due to its high salt and low moisture content • Processed meat products including chicken – pate, meat pies, sausages, sausage rolls, coagulated blood, rissoles, meat balls • Fish, shellfish, fish products, fish soups and fish stocks – caviar, fish balls, patties, salads, sauces and stews • Other food dishes – pizza, prepared meals, sandwiches, salads and cooked rice and cooked pasta. Class Activity – Presentation Trainer shows students a range of food items which are classified as ‘potentially hazardous’ foods.

Slide

Handle and store food according to enterprise guidelines

Temperature Danger Zone:

- The temperature range in which food poisoning bacteria multiply most rapidly
- This is 5°C to 60 °C
- Keep food out of this range OR minimize time food spends in this range
- All time food spends in this temperature range is cumulative

Slide 66

Slide No

Trainer Notes

66.

Trainer explains Temperature Danger Zone stating:

- The Temperature Danger Zone is the temperature range in which food poisoning bacteria multiply most rapidly
- The range is 5°C to 60°C
- Every effort must be made to keep potentially hazardous food out of this temperature range
- Where food has to be in this range (such as when it is being prepared), the amount of time it spends in this zone must be minimised
- It is important to note all time food spends in the Temperature Danger Zone is cumulative
- If a piece of meat is left out on the bench for one hour, refrigerated and then brought back out into the kitchen, the time it then spends in the Temperature Danger Zone is added to the previous time – the clock (and the bacteria count) does not get reset to zero when the food was put in the fridge again.

Slide

Handle and store food according to enterprise guidelines

The '2/4 rule':

- Potentially hazardous food which has been in the Temperature Danger Zone for 4 hours or more must be thrown out
- Potentially hazardous food which has been in the Temperature Danger Zone for 2 hours can be refrigerated and then returned to the Temperature Danger Zone for another 2 hours
- High-risk food which has been in the Temperature Danger Zone for 2 hours must be cooked or eaten within next 2 hours or be thrown out

Slide 67

Slide No	Trainer Notes
67.	Trainer explains awareness of the 2/4 rule is critical in applying safe food handling procedures explaining the 2/4 rule states: • Potentially hazardous foods which have been in the Temperature Danger Zone for four hours (or more) must be discarded/thrown out • Potentially hazardous foods that have been in the Temperature Danger Zone for two hours can be refrigerated and then returned to the Temperature Danger Zone for another two hours, maximum • When high risk food has been in the Temperature Danger Zone for two hours it must be cooked or eaten within the next two hours or thrown out • There are no exceptions to this rule.

Slide

Handle and store food according to enterprise guidelines

'Two-step' rule for cooling hot high-risk food:

- Step 1:
 - Cool hot food to 21°C within 2 hours
- Step 2:
 - Once it has reached 21°C it must reach 5°C (or less) within a further 4 hours
- High-risk not conforming to these requirements must be thrown out

Slide 68

Slide No	Trainer Notes
68.	Trainer introduces the two-step rule for the cooling of high risk hot food explaining: Step 1: Cool hot food down from 60°C (or above) to 21°C within two hours of removing the food from the stove, oven or other cooking unit Step 2: Once the food has reached 21°C it should be placed into a refrigerator/cool room, and then cooled to 5°C (or below) within a further four hours: • If the cooling of high risk food does not meet these criteria, the food must be thrown out • Once food has reached 5°C it can safely be put in the freezer. Class Activity – Discussion Trainer asks trainees how they might cool down hot food and monitor the activity to make sure requirements are complied with. Responses may include: • Cooling in small amounts • Frequent stirring • Placing containers into ice water baths • Using a fan to cool items down • Setting timers to notify of times • Using food thermometer to test temperatures.

Slide

Handle and store food according to enterprise guidelines

Thawing or defrosting frozen food:

⦿ Must occur:

- Under refrigeration, or
- In a microwave, or
- Under cold running water

⦿ Must not occur by:

- Placing into sink of water or bowl of water, or
- Leaving items on bench for prolonged period

Slide 69

Slide No	Trainer Notes
69.	Trainer discusses thawing of frozen food stating: • Frozen food must be thawed before use (also known as 'defrosting') using one of three methods: ▪ In a refrigerator/coolroom – large pieces of meat may take two to three days to defrost so planning ahead is vital: this is the preferred method of thawing as the food is always out of Temperature Danger Zone ▪ If pressed for time, use a microwave to defrost, moving pieces of food during the procedure – food should be immediately cooked once taken from the microwave after defrosting ▪ Run the item under cold water (less than 20°C) – only suitable for small portions/items. Not suitable for products which have been 'breaded' or 'crumbed' ▪ All meats should be cooked immediately after thawing ▪ It is not acceptable to thaw items out by placing them in a bowl or sink of water. Class Activity – Demonstrations Trainer demonstrates how to thaw frozen food using the three methods described on the slide.

Slide

Handle and store food according to enterprise guidelines

'Clean' means:

- Free from visible contamination
- and
- Free from odor

Slide 70

Slide No

Trainer Notes

70.

Trainer defines 'clean' as:

- Free from visible debris/contamination (dirt, food, grime).

And:

- Free from objectionable odour (which has relevance to the need for premises to have waste bins which are clean).

Slide

Handle and store food according to enterprise guidelines

Safe food handling practices when preparing food:

- Ensure all food used is safe and fit for consumption
- Protect food *during* preparation
- Wash and sanitize fruit and vegetables
- Excluding unhealthy staff from food prep areas and duties

(Continued)

Slide 71

Slide No	Trainer Notes
71.	Trainer presents safe food handling requirements in relation to processing/preparing food: • Ensuring only safe and suitable food is processed – food unfit for consumption must not be processed. This includes: ▪ Foods that look or smell 'off' or shows other signs of contamination ▪ Food that has exceeded its use-by date • Protecting food being prepared from contamination – this includes preventing contamination from: ▪ Physical sources ▪ Chemicals ▪ Microbiological contamination – which may be caused by leaving potentially hazardous food in the Temperature Danger Zone for too long while it is being processed, or failing to cook food at the correct temperature. High risk food should reach an internal temperature of 75°C which should be verified with a thermometer • Ensuring all fruit and vegetables are washed in a sanitising solution before being prepared • Excluding unhealthy people from food handling/processing activities – food processing activities including chopping, cooking, drying, fermenting, heating, pasteurising, thawing and washing, or a combination of these activities. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

- Use only clean and sanitized equipment and utensils
- Separate chemicals from food
- Keep batches separate
- Do not touch cooked or ready-to-eat food with bare hands

(Continued)

Slide 72

Slide No	Trainer Notes
72.	Trainer continues presenting safe food handling requirements in relation to processing/preparing food: • Using clean equipment and utensils that have been sanitised and which are in proper working order – any piece of food equipment not working properly either raises safety and welfare risks for staff or presents the possibility the food processing job it was intended to do (such as to cook food to a certain temperature, or store/display food at a certain temperature) may not be achieved • Ensuring chemicals are kept separated from food and food utensils and equipment during processing • Keeping individual batches of processed food separate – batches of prepared food should never be mixed together as this can give rise to situations where food may remain able to be served even though it has passed its safe food date/time • Avoiding touching cooked/ready-to-eat food with the bare hands where it will not be subsequently cooked. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

- Throw out all food dropped on the floor
- Wash and sanitize utensils dropped on the floor before using them
- Do not cough or sneeze over food or food surfaces
- Use a tasting spoon (correctly)

Slide 73

Slide No	Trainer Notes
73.	Trainer continues presenting safe food handling requirements in relation to processing/preparing food: • Discarding any food dropped on the floor – even if it was only on the floor for 1 second • Washing and sanitising any food handling tool, implement or utensil dropped on the floor before re-using it • Avoiding coughing or sneezing over food or food preparation utensils, equipment or surfaces • Using a tasting spoon to taste dishes (not the spoon used to stir the food) – and not replacing in the food. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

Safe food handling practices when using cold display units:

- Food must be at 5°C or below
- Keep food covered and protected
- Use FIFO principles
- Check and record temperature of food at least daily

If refrigerated units are not used there must be another control – such as color-coding or writing times on labels on food.

Frozen food must be displayed so it remains 'hard frozen'.

Slide 74

Slide No	Trainer Notes
74.	Trainer presents safe food handling requirements in relation to using cold display units/cabinets: • Food should be at or below 5°C • Food should be covered/wrapped to prevent contamination • Temperatures must be regularly checked (at least daily) and recorded using an independent thermometer • Serve food using FIFO principles • Protective guards must be provided (where appropriate) to prevent customers breathing, sneezing and/or coughing over the food • Pre-prepared sandwiches and filled rolls should be stored in these cabinets – where they are not so stored, some system must apply (such as the use of colour-coded stick-on labels, or written times on the wrapping/container) that will allow control over the length of time the food spends in the Temperature Danger Zone. ▪ Pre-prepared sandwiches and/or filled rolls must not be sold/eaten when they have spent four hours or more in the Temperature Danger Zone. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

Safe food handling practices when using hot display units:

- Food must be 60°C minimum
- Pre-heat food before placing into pre-heated unit
- Use FIFO stock rotation
- Check and record temperatures at least daily
- Do not mix batches or top-up up service trays

Slide 75

Slide No	Trainer Notes
75.	Trainer presents safe food handling requirements in relation to using hot display units/cabinets: • The temperature of the food must be over 60°C (or the 2/4 Rule must be applied) • Food to be put in hot food cabinets must be preheated rapidly before being placed in the cabinet • Food should be served in the order it was placed in the cabinet to minimise risk of contamination (as well as guard against loss of taste, appearance and quality) • Hot foods left from the day before should be served first, following the guidelines set out in 'Re-heating previously cooked food' – foods can only be re-heated once. Note some premises follow a standard operating procedure of discarding <i>all</i> left-over food • Temperatures of food must be regularly checked (at least daily) using an independent thermometer • Food must not be topped-up but rotated to keep it fresh and avoid mixing batches. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

Safe food handling practices for self-service situations:

- Monitor customers
- Pay special attention to children
- Ensure hot food stays hot and cold food stays cold
- Clean and sanitize or replace any dropped service utensils
- Clean spills up immediately

(Continued)

Slide 76

Slide No	Trainer Notes
76.	Trainer presents safe food handling requirements in relation to situations where customers serve themselves and/or there is unpackaged ready-to-eat food: • Customer activities are routinely and regularly monitored so unsafe practices can be identified and remedial action taken – this means a staff member must be appointed to watch the customers in order to prevent them from doing anything to compromise the food, and/or to remove food from sale/service when it has been contaminated • Special attention is paid to children at self-serve areas – they are prone to handling food with their hands, and taking food from displays and then putting it back • Hot food is kept hot (60°C and above), and cold food is kept cold (5°C and below) or the 2/4 rule is applied • Any utensils dropped by customers are immediately replaced with clean and sanitised ones • Spills are cleaned up immediately. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

- Discard contaminated food
- Use advisory signs
- Cover and protect foods
- Provide separate utensils for each food type
- Use sneeze-guards

(Continued)

Slide 77

Slide No	Trainer Notes
77.	Trainer continues presenting safe food handling requirements in relation to situations where customers serve themselves and/or there is unpackaged ready-to-eat food: • Any contaminated food is thrown out – this includes contamination by customers coughing or sneezing over the food • Signs are posted advising customers of safe food handling practices – such as asking them not to use utensils in other foods, to refrain from coughing and sneezing over the food, to refrain from handling any of the food with their bare hands • Foods are covered and protected from contamination when not actually being used • Separate utensils are provided for each and every food item • Sneeze-guards are in place and are constructed/positioned to be effective. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

- Do not mix food batches
- Throw out 'plate waste'
- Display small amounts of food
- Provide extra service utensils
- Provide 'rests' for service gear
- Apply 2/4 rule

Slide 78

Slide No	Trainer Notes
78.	Trainer continues presenting safe food handling requirements in relation to situations where customers serve themselves and/or there is unpackaged ready-to-eat food: • Batches and/or trays of food items are not mixed – stock rotation is important but so is keeping batches separate • Throw out any plate waste/returned food • Small batches of food are put out – and replaced frequently, rather than putting out a large tray/platter to begin with • Extra utensils are provided – there always seems to be a need for more • Clean 'rests' for utensils (spoons and other service utensils) are provided and changed regularly to prevent cross-contamination • The 2/4 rule is being complied with. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

Safe food handling practices when transporting food:

- Use a food transport vehicle
- Maintain vehicle and food containers in clean condition
- Keep raw and cooked foods separate
- Keep hot food at 60°C+ or deliver within 2 hours
- Keep cold food at 5°C (or below) or deliver within 2 hours

(Continued)

Slide 79

Slide No	Trainer Notes
79.	Trainer presents safe food handling requirements in relation to food transportation: • A dedicated food delivery vehicle is used – food should not be transported in family cars • The food storage area of the delivery vehicle is maintained in a clean condition been cleaned – also, any boxes, containers, transport boxes (including warmers/heaters) used to store food during transport must be clean • Raw and cooked/ready-to-eat foods are kept physically separate – to avoid cross contamination • The temperature of hot and cold food is checked prior to being loaded – hot food to be 60°C or above, and cold food to be 5°C or below: frozen food to be hard frozen • Where hot food cannot be held at 60°C or above, it will need to be able to be delivered within two hours • Where cold potentially hazardous food cannot be held at 5°C or below, it will 100% definitely need to be able to be delivered within two hours. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

- Pre-cool vehicle before loading refrigerated food
- Load refrigerated food at 5°C or below
- Monitor and record times and temperatures of food and vehicle
- Load food immediately prior to delivery
- Cover and protect food

(Continued)

Slide 80

Slide No	Trainer Notes
80.	Trainer continues presenting safe food handling requirements in relation to food transportation: • Refrigerated food delivery vehicles must be able to hold food outside the Temperature Danger Zone – this may require the vehicle to be connected to mains power and pre-cooled prior to food being loaded into the vehicle • Temperatures (and times) of food items are recorded onto a Food Delivery-Transportation log (or similar) when they are loaded into the food delivery vehicle • Food is not loaded into the delivery vehicle until it is ready to be delivered • All food is covered to protect it from contamination. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

- Pre-cool vehicle before loading refrigerated food
- Load refrigerated food at 5°C or below
- Monitor and record times and temperatures of food and vehicle
- Load food immediately prior to delivery
- Cover and protect food

(Continued)

Slide 80

Slide No	Trainer Notes
81.	Trainer continues presenting safe food handling requirements in relation to food transportation: • The delivery vehicle itself has been well maintained to minimise the risk of vehicle breakdown during food delivery • Chemicals are not stored/transported with food items – chemicals can be carried in the same vehicle as food but they must in a separate part of the vehicle • No pets/animals are allowed in the food delivery vehicle • All doors on the food delivery vehicle should be locked when unattended. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

When working in a bar:

- Use fork or tongs to add fruit and ice to drinks
- Never re-use 'plate waste'
- Store drinking straws correctly
- Verify glass washer has detergent
- Use de-naturing agent in beer trays

(Continued)

Slide 82

Slide No	Trainer Notes
82.	Trainer presents specific requirements for people who work in a bar: • Use a fork or tongs when putting fruit or ice in a glass – do not use fingers • Do not re-use any fruit, straws, beverage, food, garnish left by a guest, or which comes back from the tables – it must be thrown out • Ensure straws are correctly stored – they must be stored so they are kept free from flies, dust and contamination. They must be able to be obtained one at a time without the others being touched so it is not acceptable to store straws in a glass on the bar • Check glass washing machine has detergent, and is operating at the prescribed temperature (which is 70° C) • Put de-naturing agent in drip trays (drip trays are trays which are placed under beer drawing taps to catch the drips/overflow from glasses) – there must be sufficient de-naturing agent to actually de-nature the waste beer and stop premises pouring this waste beer back into the barrel. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food according to enterprise guidelines

- No smoking or spitting
- Wash hands
- Wear clean clothes
- Stay away from work when ill
- Ensure all glassware is clean
- Ensure all utensils are clean

Slide 83

Slide No	Trainer Notes
83.	Trainer continues presenting specific requirements for people who work in a bar: • No smoking or spitting behind the bar • Wash hands at all times that kitchen-based food handlers are required to wash their hands • Ensure clean clothes, hands and fingernails • Stay away from work if ill or suffering from an infected cut: notify doctor of food handler status – bring a medical clearance stating fitness for work on return • Ensure all glassware and utensils are clean – plates and glasses must also be free of chips and cracks. Class Activity – Demonstrations Trainer demonstrates safe food handling practices as identified on the slide.

Slide

Handle and store food to protect it and maintain quality

Requirements for dry goods store:

- Fly and vermin-proof
- Well lit and ventilated
- Not crowded or over-stocked
- Tight-fitting doors
- Bottom shelf allows broom and mop access

(Continued)

Slide 84

Slide No	Trainer Notes
84.	Trainer describes dry goods store and identifies requirements: • The area is fly- and vermin-proof to minimise contamination by pests • It is well ventilated and lit – to deter pests and to allow staff to see what they are doing and identify and remedy spillages • It is never overstocked – excess stock costs money, clutters things up, and increases the chance of out-of-date stock being used • It is fitted with doors which make a proper fit when fully closed to help exclude pests • The lowest shelf is sufficiently far enough above floor level to enable air circulation around produce, and to allow mops and brooms to reach under the shelves when cleaning is required. Class Activity – Demonstrations Trainer demonstrates requirements for storage as identified on the slide.

Slide

Handle and store food to protect it and maintain quality

- Use proper food containers:
 - Made from food-grade materials
 - With tight-fitting lids
- Clean and sanitize containers
- Transfer food from open cans to suitable containers and refrigerate

Slide 85

Slide No	Trainer Notes
85.	Trainer continues describing dry goods store and identifies requirements: • Bulk food containers used are made from food grade materials and have tight-fitting lids – plastic garbage bins (even brand new/unused ones) are not permitted to be used for food storage as they are liable to splitting, do not have a smooth internal surface that facilitates cleaning and do not protect against mice and rats • Food storage containers are cleaned and sanitised before being re-used/re-filled – to guard against batch-mixing • Any canned, tinned or bottled food must be transferred to an appropriate container and refrigerated once the container has been opened – it is not acceptable (for example) to open a can, use half of the contents and then return the open can to dry storage. The food must be transferred to a plastic or stainless steel (or other appropriate) container and then placed in the refrigerator. Class Activity – Demonstrations Trainer demonstrates requirements for storage as identified on the slide.

Slide

Handle and store food to protect it and maintain quality

Requirements for refrigerated storage:

- Keep temperature at or below 5°C
- Check and record temperature at least daily
- Close doors between use
- Do not crowd or overstock

(Continued)

Slide 86

Slide No	Trainer Notes
86.	Trainer describes refrigerated storage and identifies requirements: • The temperature is kept at 5°C or below and this temperature is checked with an independent calibrated thermometer – checks must be done at least once per day • The coolroom/refrigerator door is closed between uses and an effort made to minimise opening times by planning these openings – an open door raises the temperature and makes the unit more expensive to operate • The cool room is not overcrowded to enable air to circulate freely around food items. Class Activity – Demonstrations Trainer demonstrates requirements for storage as identified on the slide.

Slide

Handle and store food to protect it and maintain quality

- Store hot food in small amounts to facilitate cooling
- Cover and protect food
- Label food – where required
- Separate raw high-risk food from cooked or ready-to-eat food

Slide 87

Slide No	Trainer Notes
87.	Trainer continues describing refrigerated storage and identifies requirements: • Food loads put into the coolroom/refrigerator are broken down into smaller units to enable faster cooling: where large units of food are placed in the refrigerator it takes a lot longer for the core of that food to move out of the Temperature Danger Zone. ▪ Hot foods should be allowed to cool (perhaps by placing the food in pots into tubs full of a water-ice mixture) before being placed in the cool room: frequent stirring of the item will help it to cool quicker ▪ If 'too much' hot food is placed into refrigeration it will raise the temperature of the unit and may cause condensation which could lead to cross-contamination (see below) ▪ The 'Two-step rule for cooling hot foods' (see below) must be complied with. • All food is covered and protected from contamination – plastic film with a label attached to identify the food and date it was placed under refrigeration may be used • Potentially hazardous raw food is separated from cooked and/or ready-to-eat foods – this is to prevent cross contamination. Class Activity – Demonstrations Trainer demonstrates requirements for storage as identified on the slide.

Slide

Handle and store food to protect it and maintain quality

Frozen food storage requirements:

- Operate at -15°C or below
- Do not freeze hot food
- Never re-freeze thawed items
- Defrost freezers regularly

(Continued)

Slide 88

Slide No

Trainer Notes

88.

Trainer describes frozen food storage requirements:

- Must keep food at -15°C or below – many venues will operate freezers at -18°C: food must stay hard frozen
- Hot food is never frozen – cool it first following the two-step rule for cooling hot food
- Thawed items must never be refrozen
- That freezers are defrosted regularly to maintain operating effectiveness and encourage use (or disposal) of items.

Class Activity – Demonstrations

Trainer demonstrates requirements for storage as identified on the slide.

Slide

Handle and store food to protect it and maintain quality

- Close freezer doors between uses
- Check and record temperature at least daily
- Freeze 'small' not 'large' amounts
- Follow manufacturers' instructions regarding freezing of food products

Slide 89

Slide No	Trainer Notes
89.	Trainer continues describing frozen food storage requirements: • Freezer doors are kept closed when the freezer is not in use • Freezer temperature is be checked at least daily to ensure correct operating temperature • Large pieces/amounts of food are not frozen as this encourages others to defrost the item and then re-freeze it – in practice this means: ▪ Freezing slices rather than slabs of meat ▪ Using shallow storage containers rather than deep ones • Manufacturer's instructions regarding the storage of frozen food products are followed – these may relate to storage temperatures and the length of time the product can be stored (for quality and/or safety reasons). Class Activity – Demonstrations Trainer demonstrates requirements for storage as identified on the slide.

Slide

Handle and store food to protect it and maintain quality

FIFO stock rotation:

- First In, First Out
- Common practice for rotating food and beverage stock
- Move old stock forward on shelf and place new stock behind existing stock
- Put new stock below or beneath existing stock

Slide 90

Slide No	Trainer Notes
90.	Trainer explains FIFO stock rotation explaining effective stock rotation for foods means using the FIFO approach to stock rotation – First In, First Out: • This method requires food is used/served in the order it was delivered meaning the foods which have been in stock the longest are used first • In practice this means when storing food: ▪ Old/existing stock must be moved forward on the shelf and the newly delivered stock must be placed behind it – this allows the stock at the front (the oldest stock) to be used before the newer stock ▪ Existing product in a chest freezer should be removed and the new stock placed at the bottom of the freezer – the existing/old stock is then replaced in the freezer on top of the newer stock. Class Activity – Demonstrations Trainer demonstrates practical application of FIFO stock rotation in relation to: • Food on shelves • Food in refrigerators • Food in freezers.

Slide

Handle and store food to protect it and maintain quality

Cleaning requirements:

- Premises need to be kept clean
- Fixtures and fittings must be kept clean
- Cleaning equipment must be cleaned after use

Slide 91

Slide No	Trainer Notes
91.	Trainer presents 'cleaning' requirements explaining businesses are required to keep their food premises and equipment clean which can be seen as: • A state in which there is no accumulation of: ▪ Garbage, except in garbage containers ▪ Recycled matter, except in containers ▪ Food waste ▪ Dirt ▪ Grease ▪ Other visible matter • The business must also maintain all its fixtures, fittings and equipment (in a clean condition). ▪ This requirement applies to things such as walls, floors, ceilings, windows, benches, shelves, sinks, wash hand basins, cupboards, grease filters, cooking equipment, food preparation equipment, food utensils, food vending machines, light fittings, ventilation ducts, pipes and electrical wiring • Equipment used to do the cleaning (for example, brooms, mops and buckets, hoses) must also be cleaned – they should be cleaned, washed and/or sanitised after each use.

Slide

Handle and store food to protect it and maintain quality

Cleaning tools and equipment:

- Clothes
- Brushes
- Sponges
- Towels
- Spray bottles
- Grill cloths
- Abrasive pads
- Scrapers
- Paper towel

Slide 92

Slide No

Trainer Notes

92.

Trainer identifies cleaning tools and equipment used in a kitchen to clean food equipment as listed on slide.

Class Activity – Presentation

Trainer (or representative from cleaning supply company):

- Presents sample items for each product listed
- Identifies use of each.

Slide

Handle and store food to protect it and maintain quality

Cleaning agents and chemicals:

- Detergents
- Sanitizers
- Degreasers
- Oven cleaners
- Grill cleaners
- Rinse aids
- Combi-oven cleaners
- Glass cleaners
- Descalers
- Dishwashing detergents
- Multi-purpose cleaners
- Cooktop cleaners

Slide 93

Slide No	Trainer Notes
93.	Trainer identifies range of cleaning agents/chemicals used to clean equipment in a kitchen as listed on slide: Class Activity – Presentation Trainer (or representative from cleaning supply company): • Presents sample chemicals as listed on slide • Identifies use/s for each • Demonstrates how to use each chemical • Identifies safety issues.

Slide

Handle and store food to protect it and maintain quality

General cleaning procedure for food equipment:

- Allowing items to cool before cleaning them
- Checking with other staff
- Gathering required tools and chemicals
- Knowing the specific procedure for individual items
- Cleaning 'in place' or moving to sink
- Pre-cleaning then washing
- Rinsing
- Sanitizing

Slide 94

Slide No	Trainer Notes
94.	Trainer presents general cleaning procedures and techniques for food preparation equipment which can include: • Allowing item to cool down before cleaning or disassembly (where required) • Checking with other staff to determine item: ▪ Is no longer required and can be cleaned ▪ Needs to be cleaned • Ensuring required cleaning tools, equipment and cleaning agents/chemicals are available • Cleaning the item where it is physically located – or moving it to the cleaning area • Making sure you know and/or have access to the required cleaning procedures and techniques for the individual item • Pre-cleaning items – such as: ▪ Physically removing food scraps/debris ▪ Using bristle brush to remove food debris ▪ Rinsing ▪ Soaking in detergent solution • Washing items: ▪ Thoroughly ▪ Using hot water

	▪ Using designated/appropriate detergent for the item and the cleaning job to be performed ▪ Scrubbing ▪ Using abrasive pads as/if required • Rinsing items • Sanitising the item – using hot water, steam or chemicals.
--	--

Slide

Handle and store food to protect it and maintain quality

Cleaning instructions – may be available and will detail:

- Item or area to be cleaned
- When cleaning is required
- Cleaning equipment and chemicals required
- Cleaning procedure

Slide 95

Slide No

Trainer Notes

95.

Trainer explains some venues have detailed cleaning instructions to guide staff in the cleaning of food equipment, utensils and areas.

Slide

Handle and store food to protect it and maintain quality

Sample cleaning instruction:

Job	Description
Utensils and cutting boards – Daily	• Clean utensils and cutting boards as required during trade and at the end of each day's trade • Remove dry soil and debris and rinse with warm water • Wash with XYZ detergent, soaking as required; rinse and sanitize • Rinse and allow to air dry

Slide 96

Slide No	Trainer Notes
96.	Trainer provides example of cleaning instruction for 'utensils and cutting boards' as shown on slide. Class Activity – Demonstration and Practical Trainer demonstrates how to follow cleaning instructions for cleaning: • A cutting/chopping board • Several food utensils. Trainer provides opportunity for students to practice same.

Slide

Handle and store food to protect it and maintain quality

Sample cleaning instruction:

Job	Description
Microwave – Daily	• Clean the microwave as required during trade and at the end of each day's trade • Wipe away loose debris and dirt with a clean cloth • Spot-clean or scrape identifiable problem areas • Wash with detergent and hot water, rinse and sanitize • Rinse and allow to air dry

Slide 97

Slide No

Trainer Notes

97.

Trainer shows another example of cleaning instruction as per slide.

Class Activity – Demonstration and Practical

Trainer demonstrates how to follow cleaning instructions for cleaning:

- Microwave.

Trainer provides opportunity for students to practice same.

Slide

Handle and store food to protect it and maintain quality

Sample cleaning instruction:

Job	Description
Bain Marie – Daily	• Clean the Bain Marie at the end of each day's trade • Remove Bain Marie trays and wash them in sink using detergent and hot water, rinse and sanitize • Rinse and allow to air dry • Wash main unit (including any hot press and plate warmer cabinet) using detergent and hot water, rinse and sanitize: rinse and allow to air dry

Slide 98

Slide No	Trainer Notes
98.	Trainer shows another example of cleaning instruction as per slide. Class Activity – Demonstration and Practical Trainer demonstrates how to follow cleaning instructions for cleaning: • Bain-marie. Trainer provides opportunity for students to practice same.

Slide

Handle and store food to protect it and maintain quality

In relation to cleaning in kitchen and food areas:

- Cleaning instructions MUST be adhered to
- A 'cleaning schedule' will identify individual staff with responsibility for cleaning items at nominated times and days

Slide 99

Slide No	Trainer Notes
99.	Trainer provides additional information about cleaning: • Cleaning instructions/directions must be followed – they are not optional • Venues that have developed cleaning instructions will also generate cleaning instructions to identify names of individual staff with responsibility for cleaning designated items/areas at set times and/or on stated days of the week. Class Activity – Individual Exercise Trainer asks trainees to develop sample cleaning instructions for one item of food preparation/cooking equipment.

Slide

Store food at correct temperature

Dry goods store:

- Non-refrigerated
- For canned, bottled and dried food
- May be room-size or cupboards or shelves
- 15°C to 20 °C

Slide 100

Slide No	Trainer Notes
100.	Trainer presents temperature information for storing dry goods: • The dry goods store is a non-refrigerated store where canned and dried food are kept • It may be room-size, or a variety of cupboards and/or pantries • Desired temperature for dry store should be in the range 15°C to 20°C.

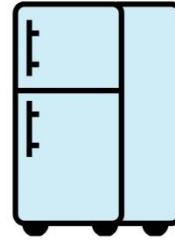

Slide

Store food at correct temperature

Refrigerated stores -

Cool rooms and other units

- General requirements is 5°C or below
- Many operate at lower temperature
- Meat and seafood – best at 1°C to 2°C

Slide 101

Slide No

Trainer Notes

101.

Trainer presents temperature information for storing refrigerated goods:

Refrigerated storage is used for perishable fresh products such as fruit and vegetables, dairy products, eggs, meat, poultry and seafood.

- The basic requirement is storage is at 5°C or below: many operate at 2°C
- Meat poultry and seafood are best stored fresh at 1°C to 2°C
- If purchasing on daily basis this means a high turnover and 4°C is sufficient but if high risk foods are purchased less frequently then colder temperatures are best
- Fruit and vegetables require less severe temperature:
 - Tomatoes can be stored in the dry store if they are purchased regular basis.
 - Most vegetables only require refrigeration to keep their *quality*, not for food safety reasons
- Refrigerated storage may occur in cool rooms, under-counter refrigeration units or domestic refrigerators.

Slide

Store food at correct temperature

Freezers:

- Store frozen food
- May be walk-in, upright or chest type
- Must keep food 'hard frozen'
- -15°C to -18 °C.

Slide 102

Slide No	Trainer Notes
102.	Trainer presents temperature information for storing refrigerated goods: • Freezers are used to store frozen produce • Freezers may be chest type, up-right, or walk-in, but they must be maintained such that the food remains hard frozen – domestic freezers can be used in commercial situations • Standard operating range is -15°C to -18°C.

Slide

Store food at correct temperature

Temperatures for displaying potentially hazardous food:

- Cold food: at or below 5°C
- Hot food: at or above 60°C
- Frozen food: kept 'hard frozen'

Slide 103

Slide No	Trainer Notes
103.	Trainer recaps display temperatures for potentially hazardous food : ● Cold food – at 5°C or below. Between 1°C and 5°C will keep high risk food out of the Temperature Danger Zone and prevent freezing of product (which makes it unattractive and unappealing to customers) ● Hot food – at 60°C or above ● Frozen food – maintained in a 'hard frozen' state (in the range of -15°C to -18°C or below). Class Activity – Discussion Trainer asks trainees: ● Define 'potentially hazardous food' ● Give examples of potentially hazardous food.

Slide

Store food at correct temperature

Probe thermometer (not infra-red):

- Should be available for use when required
- Calibrate at least every 6 months
- Must be accurate to $\pm 1^{\circ}\text{C}$
- Clean and sanitize between uses
- Allow to reach room temperature in between use on hot and cold foods
- Treat with care

Slide 104

Slide No	Trainer Notes
104.	Trainer states food premises should have a probe thermometer explaining this thermometer must be: • Readily available for food handling staff to use as required • Checked/calibrated very six months (minimum) to ensure it is giving an accurate reading. Instructions on how to do a hot and cold calibration to check the accuracy of the thermometer are sometimes included in the instructions that accompany the thermometer when it is purchased • Thermometers must be accurate to $\pm 1^{\circ}\text{C}$ or they must be repaired or replaced • Cleaned and sanitised between uses when it is being used to check the temperature of food – the use of a sanitising wipe to achieve this is common • Allowed to reach room temperature when being alternated between use on hot and cold food or vice versa • Treated with care – do not knock, drop or damage it: if it is knocked, dropped or damaged, it should be immediately checked for accuracy. Class Activity – Demonstrations Trainer shows students: • How to use probe thermometers in hot and cold food to measure temperature • How to use probe thermometer to take temperature of frozen items • How to read temperature of cool room using probe thermometer • Use of infra-red thermometer highlighting limitations of this type as it can only provide a surface reading.

Slide

Store food at correct temperature

Cold calibration:

- Make/mix ice slurry (50% water 50% ice) and allow to stand for 5 minutes
- Insert probe into mixture
- Record reading – should be 0°C
- Repair or replace if reading is outside +/-1°C

Slide 105

Slide No	Trainer Notes
105.	Trainer explains manufacturer's instructions when calibrating thermometers: Cold Calibration • The following procedure must be applied at least every six months (some do every month) for the ice point calibration of thermometers: ▪ Put ice and pre-cooled water (about half-and-half) into a container and allow to stand for about five minutes ▪ Insert the probe of the thermometer into the ice-water mixture and allow to stand for two minutes ▪ Record temperature reading – it should be 0°C – on Equipment Calibration Log, Independent Thermometer Calibration Record (or similar) ▪ Replace, repair or get recalibrated if temperature reading is $\pm 1^{\circ}\text{C}$ or more. Class Activity – Demonstration and Practical Trainer demonstrates how to do ice point calibration and provides opportunity for students to practice same.

Slide

Store food at correct temperature

Hot calibration:

- Boil water
- Insert probe into water
- Record reading – should be 100°C
- Repair or replace if reading is outside $\pm 1^{\circ}\text{C}$

Slide 106

Slide No	Trainer Notes
106.	Trainer explains manufacturer's instructions when calibrating thermometers: Hot Calibration • The following procedure must be applied at least every six months (some do every month) for hot calibration of thermometers: ▪ Boil water and place thermometer probe into the boiling water ▪ Allow to stand for two minutes ▪ Record temperature reading – should be 100°C – on Equipment Calibration Log, Independent Thermometer Calibration Record (or similar) ▪ Replace, repair or get recalibrated if temperature reading is $\pm 1^{\circ}\text{C}$ or more. Class Activity – Demonstration and Practical Trainer demonstrates how to do hot calibration and provides opportunity for students to practice same.

Slide

Summary – Element 3

When handling and storing foodstuffs:

- Inspect all food deliveries and reject unsafe or unsatisfactory food
- Store food promptly under the correct conditions
- Apply FIFO stock rotation
- Keep stores neat and clean

(Continued)

Slide 107

Slide No

Trainer Notes

107.

Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Summary – Element 3

- Take special care with potentially hazardous foods
- Keep time food spends in the Temperature Danger Zone to a minimum
- Apply the 2/4 rule at all times
- Follow the two-step rule for cooling hot food

(Continued)

Slide 108

Slide No	Trainer Notes
----------	---------------

108.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.
------	---

Slide

Summary – Element 3

- Do not thaw food by leaving it on a bench or in a sink or bowl of water
- Protect food and food surfaces against contamination
- Follow standard protocols for re-heating previously cooked food
- Closely monitor all self-serve food situations

(Continued)

Slide 109

Slide No	Trainer Notes
----------	---------------

109.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.
------	---

Slide

Summary – Element 3

- Remember beverages are classified as food
- Check and maintain storage areas in good condition at required temperatures
- Apply organizational requirements for cleaning food items and food areas
- Use PPE when handling chemicals
- Calibrate food thermometers at least every six months

Slide 110

Slide No	Trainer Notes
110.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Follow food safety program

Performance Criteria for this Element are:

- Ensure work activities conform with enterprise food safety program ✓
- Identify and monitor areas of risk in individual work area ✓
- Take corrective actions within individual scope of responsibilities to minimize risk in accordance with the enterprise food safety program ✓
- Report risks beyond the control of the individual to the appropriate person/s ✓
- Complete records according to enterprise requirements and work responsibility ✓

Slide 111

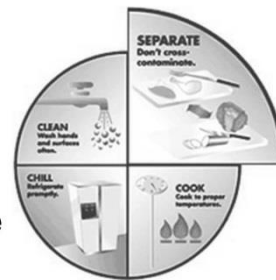

Slide No	Trainer Notes
111.	Trainer identifies for trainees the Performance Criteria for this Element, as listed on the slide. Class Activity – Discussion Trainer asks trainees questions about following a food safety program by asking questions such as: • What do you think a food safety program is? • Why do venues have them? • How do you learn about the requirements of the food safety program at your workplace?

Slide

Ensure work conforms with food safety program

Venues may have an FSP:

- 'Food Safety Plan' or 'Food Safety Program – two names for the same thing
- FSP may be a legal requirement or may be put in place voluntarily
- The FSP provides direction for safe food handling practices at the venue based on an analysis of their operations (products and processes)

Slide 112

Slide No	Trainer Notes
112.	Trainer states venues may have a Food Safety Plan (also known as a Food Safety Program) explaining the FSP may be: • A legal requirements – there are places where an FSP is a mandatory/legislated obligation • As a result of the venue taking a decision in its own right to put in place a range of safe food handling practices. Trainer advises a FSP will: • Provide guidelines for safe food handling protocols in the business and compliance with the requirements of the plan is mandatory even where the plan itself is not a legislated requirement • Have been developed after an analysis of the food handling operations of the business.

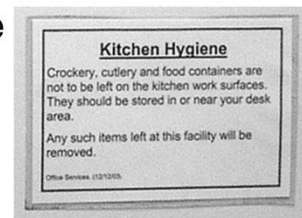

Slide

Ensure work conforms with food safety program

FSP may contain:

- Support information and direction in relation to:
 - Cleaning and sanitizing items and areas
 - Personal hygiene including health
 - Equipment and property maintenance
 - Pest control
 - Waste disposal

(Continued)

Slide 113

Slide No	Trainer Notes
113.	Trainer states the FSP will/may: • Contain a range of detailed 'support' information on requirements (the safe food handling practices for the venue) for topics such as: ■ Cleaning and sanitising – of equipment, utensils and work areas ■ Personal hygiene practices and requirements ■ Health of food handlers ■ Equipment and property maintenance ■ Thermometer use and calibration ■ Pest control – see later slides ■ Waste disposal – see later slides • Identify the food safety records to be established and maintained by the venue • Describe the training all food handlers must receive before they handle food.

Slide

Ensure work conforms with food safety program

- Safety records which need to be established and maintained:
 - By name and title
 - When they need to be completed and by whom
- The training food handlers must receive:
 - Local and mandatory
 - Extra in-house training
 - Refresher training

Slide 114

Slide No	Trainer Notes
114.	Trainer continues explaining (possible) contents of FSP: • Identify the food safety records to be established and maintained by the venue – details on later slides • Describe the training all food handlers must receive before they handle food – training may be local/mandatory training as imposed or required by local health authorities and may also prescribe extra training as well as refresher training. Class Activity – Presentation Trainer obtains a copy of a local FSP and: • Distributes and discusses with class.

Slide

Ensure work conforms with food safety program

An effective pest control program comprises three elements:

- Physical exclusion
- Chemical and mechanical control of pests
- Sound housekeeping practices

Slide 115

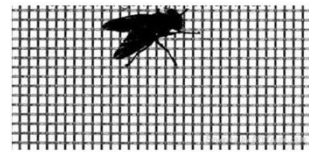

Slide No	Trainer Notes
115.	Trainer introduces topic of pest control stating effective pest control comprises three elements, all of which have to be implemented and all of which will be detailed on following slides: • Physical exclusion of pests – also known as ‘Build them out’ • Chemical and mechanical control – also known as ‘Chase them out’ • Sound housekeeping practices – also known as ‘Starve them out’.

Slide

Ensure work conforms with food safety program

Physical exclusion involves:

- Checking deliveries into the venue and kitchen
- Fly wire on doors and windows
- Sealing of holes in food area
- Exclusion of animals from food areas

Slide 116

Slide No	Trainer Notes
116.	Trainer explains physical exclusion of pests/vermin involves: • Checking all deliveries – to eliminate pests coming in with foodstuffs • Correct fitting of fly wire to doors and windows – to stop pests entering through doors and windows • Sealing of holes around pipes and other fittings – that allow pests entry to the premises • Exclusion of animals from food areas – as a standard operating practice.

Slide

Ensure work conforms with food safety program

Chemical and mechanical control can include:

- Electronic fly zappers
- Air curtains
- Traps
- Bait stations
- Sprays
- Fogging
- Professional pest control companies

Slide 117

Slide No

Trainer Notes

117.

Trainer presents examples of chemical and mechanical control of pests:

- Electronic fly zappers – ‘insectocutors’ which use UV light to attract insects and then electrocute them
- Air curtains
- Traps
- Bait stations
- Sprays
- Fogging
- Professional pest control companies – who should:
 - Inspect the venue first to identify the types of pests present
 - Be properly licensed/certified.

Class Activity – Presentation

Trainer obtains samples of items listed on slide, presents them to students and discusses their use.

Slide

Ensure work conforms with food safety program

Sound housekeeping practices:

- Clean and dry environment at end-of-day or shift
- Inspect at end-of-shift to ensure no scraps under equipment
- No water sources for pests to drink
- Remove potential shelter
- Store food in vermin-proof containers
- Repairs cracked tiles and surfaces

Slide 118

Slide No	Trainer Notes
118.	Trainer explains need for good/sound housekeeping practices as part of effective pest control providing examples such as: • Ensuring equipment, floors, benches and other areas are properly cleaned at end of shift/day so that no liquid or food remains to serve as a food source for pests and rodents • Inspecting/checking under items of equipment at end-of-shift to make sure no food scraps are there • Making sure no water remains after cleaning to serve as a drinking source for pests • Removing cartons and other items which may provide shelter for them • Correct storage of food in vermin-proof containers • Making immediate repairs to cracked surfaces and tiles which can provide an inadvertent source of food. Class Activity – Guest Speaker Trainer arranges for representative from pest control company to come and talk to students about: • Effective pest control protocols • How to identify signs of infestation • Assistance pest controllers can provide ▪ Cost/charges for services.

Slide

Ensure work conforms with food safety program

In relation to waste disposal:

- Always wear disposable gloves when handling waste/garbage/rubbish
- Always wash hands after handling waste/garbage/rubbish or bins

Slide 119

Slide No**Trainer Notes**

119.

Trainer discusses waste disposal with students presenting two basic requirements:

- Wear disposable gloves when handling garbage – and discard after use
- Wash hands after handling garbage or bins – even where disposable gloves have been worn.

Slide

Ensure work conforms with food safety program

Requirements relating to handling waste within the kitchen:

- Empty bins regularly
- Empty bins when three-quarters full
- Always empty bins at end-of-day or shift
- Fit bins with bin liners
- Clean in and around bins
- Clean bins at end-of-shift

Slide 120

Slide No	Trainer Notes
120.	Trainer identifies requirements for the handling of garbage within the kitchen can include: • Emptying internal bins regularly • Emptying bins when three-quarters full – and not waiting until they are full/overflowing • Always emptying internal bins at the end-of-shifts/session – never leave waste in bins between shifts or overnight • Using bin liners – of appropriate strength and size for each bin: fix securely • Cleaning in and around bins – lift/move bins and clean under them too • Cleaning bins at the end of each shift/session – using detergent and hot water. Class Activity – Demonstration and Practical Trainer demonstrates how to clean internal bins and fit bin liners, and provides opportunity for students to practice same.

Slide

Ensure work conforms with food safety program

External waste bins and dumpers:

- Must be 'sufficient' in numbers
- Must have tight-fitting lids
- Must be kept in good condition
- Must be kept clean
- Must be emptied regularly
- Apply appropriate recycling

Slide 121

Slide No

Trainer Notes

121.

Trainer gives requirements for the handling of garbage outside the kitchen in external bins and dumpers:

- Ensuring sufficient numbers of bins – to cater for the waste produced by the business
- Making sure all bins have tight-fitting lids'
- Keeping lids closed when bins are not in use – to help prevent access to garbage by pests
- Ensuring bins/dumpers are in good condition – to prevent leaks and protect against access by vermin
- Cleaning the external bins and dumpers – using detergents, degreasers and deodorants
- Emptying external bins on a regular basis – to help avoid accumulation of rubbish and objectionable odours
- Applying appropriate recycling techniques.

Slide

Identify and monitor areas of risk in individual work area

Basics for identifying and monitoring your work area in relation to food safety:

- 'Poor organisational practices' are often the cause of problems
- All food handlers have responsibility for identifying, monitoring and reporting issues
- 'Poor organisational practices' include sub-standard staff performance

Slide 122

Slide No	Trainer Notes
122.	Trainer introduces basics for identifying & monitoring risk: • An area of risk is frequently the result of poor organisational practices • All food handlers are under an obligation to identify and report poor organisational practices that are inconsistent with required hygiene procedures • This requirement applies whether the unsafe/poor practice relates to an organisational policy or procedure, or if it relates to the activities/practices of an individual food handler • Poor organisational practices include sub-standard performance by staff and compromise the requirements of your workplace FSP.

Slide

Identify and monitor areas of risk in individual work area

Poor organizational practices :

- Poor personal hygiene practices
- Poor food handling practices
- Poor cleaning practices

(Continued)

Slide 123

Slide No	Trainer Notes
123.	Trainer states it is impossible to identify an all-inclusive list of possible bad/sub-standard practices but they are likely to fall into one of the following categories: • Poor personal hygiene practices • Poor food handling practices that may result in the contamination of food • Poor cleaning practices that may result in cross contamination of food and other items including food preparation equipment, utensils and surfaces. Class Activity – Discussion Trainer leads a question on the poor organisational practices listed on the slide by asking questions such as: • What are examples of poor personal hygiene practices? ▪ Why are they a problem? • What are examples of poor food handling practices? ▪ Why are they a problem? • What are examples of poor cleaning practices? ▪ Why are they a problem?

Slide

Identify and monitor areas of risk in individual work area

- Practices which do not align or comply with FSP requirements
- Out-of-date practices
- Use of damaged equipment
- Staff without proper training

Slide 124

Slide No	Trainer Notes
124.	Trainer continues providing examples of poor organisational practices: • Practices that are inconsistent with the FSP for the premises • Implementation and continuation of food handling practices that are out-dated by virtue of their failure to align with changing workplace conditions and food handling activities • Use of equipment and utensils that are broken, damaged or otherwise failing to operate or function as intended • Employment of staff who have not received the necessary and appropriate training to allow them to work effectively with the required skills and knowledge.

Slide

Identify and monitor areas of risk in individual work area

Possible impact of poor food handling practices on customers:

- Food poisoning
- Death

People most 'at risk' are:

- The very young
- The very old
- Those who are already sick

Slide 125

Slide No	Trainer Notes
125.	Trainer mentions possible outcomes of failing to identify, monitor and address poor/unsafe food handling practices and procedures. Impacts on customers • Customers can be affected in the following ways: ▪ Food poisoning – which can make them ill and even give rise to the need to take time off from work, seek medical attention or be hospitalised ▪ Death – every year a number of people die as a result of food poisoning. • The three sectors of society who are most susceptible to food poisoning (and subsequent death) are: ▪ The very young – babies and children ▪ The very old ▪ People who are already ill and/or who have their immune system already compromised.

Slide

Identify and monitor areas of risk in individual work area

Impact of poor organizational practice on business:

- Fines
- Temporary or permanent closure
- Jail
- Being sued
- Bad media exposure
- Loss of jobs

Slide 126

Slide No	Trainer Notes
126.	Trainer gives examples of possible impacts of poor food handling practices on an individual business: • They may be fined by the authorities • The authorities may temporarily close the business down • Jail for the owner or staff – especially in situations where there unsafe practices have been intentional (and designed to harm customers) or extremely negligent • Being sued by customers • Bad media exposure • Permanent closure of the business • Loss of jobs for staff – as a result of reduced trade, there is often less of a need for the business to employ as many staff.

Slide

Identify and monitor areas of risk in individual work area

Ways to identify 'out of control' situations:

- Constant vigilance
- Regular workplace inspections
- Raising and maintaining awareness
- Personal observation
- Undertaking formal audits

Slide 127

Slide No	Trainer Notes
127.	Trainer lists and explains ways to identify 'out of control' situations: ● Encouraging and training staff to constantly be on the lookout for poor practices – constant attentiveness to food safety is critical ● Conducting regular workplace inspections using comprehensive checklists designed specifically for each individual premises – staff and management should cooperate in the conduct of these inspections and all areas listed on the checklists must be covered ● Raising staff awareness and maintaining that awareness in the workplace – through management initiatives such as: ▪ Refresher training for food handlers ▪ Recognitions and rewards for consistent safe food handling practices ▪ Development of posters to be put up throughout the food handling workplace ▪ Making food safety a standing item at all staff meetings/briefings ▪ Creating a workplace-based library of food safety information, references and fact sheets ● Undertaking personal observation – of all food handling areas and practices ● Conducting formal audits of the workplace every six months to identify areas and issues that may require attention.

Class Activity – Guest Speaker

Trainer arranges for management-level person from a food premises to attend and talk to students about:

- Their venue protocols to establish and maintain a safe food environment
- Internal food safety training
- Aspects of their FSP
- Monitoring protocols.

Slide

Take corrective actions

Corrective action:

- Will depend on the identified risk or hazard
- Must be taken to address out-of-control situations
- Must be recorded on a CAR

Slide 128

Slide No	Trainer Notes
128.	Trainer explains: • The corrective action needed in response to a food safety risk or hazard will depend on what has been identified • Corrective action is action taken to address or retrieve an out-of-control situation • When corrective action is taken in response to a food safety issue there is usually a need to complete an establishment-specific Correct Action Report.

Slide

Take corrective actions

CARs:

- Will contain all details of the out-of-control situation which was addressed
- Will identify any food products involved
- Will list the corrective action taken
- Must not be seen as an admission of guilt

Slide 129

Slide No	Trainer Notes
129.	Trainer discusses CARs stating : ● They will detail: ▪ Date and time of the event ▪ Indicator which identified there was a problem – for example ‘Temperature reading of cool room was 15°C at 5:30AM when I arrived for work’, or ‘Mice droppings found in food’ ▪ Food involved – naming and describing the type and amount of food ▪ Action taken to address the problem – explaining (for example): ▪ ‘Discarded food’ ▪ ‘Called service technician to check/repair cool room’ ● Recording corrective action taken should not be regarded as an ‘admission of guilt’ in relation to an out-of-control situation – rather, it should be seen as a positive indication you were actively monitoring food safety and took appropriate action when the need to do so arose. Class Activity – Handout Trainer obtains sample CAR and distributes same to class, explains all sections and discusses how to complete.

Slide

Take corrective actions

‘Scope of authority’:

- Your ability to make decisions and take action without needing to refer to anyone else
- If you identify a hazard, risk or out-of-control situation which is outside your personal scope of authority you must report and refer it

Slide 130

Slide No	Trainer Notes
130.	Trainer introduces concept of ‘scope of authority’ stating: • Individual scope of responsibility refers to the authority to take action without needing to have it approved by someone else • If action is required which falls outside personal scope of responsibility it must be reported/referred to the ‘appropriate person’ (see later slide).

Slide

Take corrective actions

Corrective action relating to purchasing of food may include:

- Ensuring and obtaining proof suppliers are legitimate food suppliers
- Adding new suppliers to your 'Approved Suppliers List'
- Preparing purchasing specifications for foodstuffs which suppliers must conform to

Slide 131

Slide No	Trainer Notes
131.	Trainer lists possible corrective action which may need to be taken in relation to the purchasing of food highlighting the action must reflect/address the identified problem/s: • Obtain proof from suppliers they are registered as a food business and/or have a FSP in place and operational • Add required/new suppliers to Approved Suppliers List (see next section) as necessary • Set purchase specifications for suppliers to comply with. Class Activity – Presentation Trainer obtains, distributes and discusses: • Sample 'Approved Suppliers List' • Example of food specification/s.

Slide

Take corrective actions

Corrective action relating to receiving food may include:

- Refuse or reject food:
 - Which is not at the correct temperature unless supplier can prove to your satisfaction it has been at this temperature for 2 hours or less
 - Not properly marked or identified
 - Delivered in an unclean vehicle
 - Mixed in with chemicals when delivered

Slide 132

Slide No	Trainer Notes
132.	Trainer lists possible corrective action which may need to be taken in relation to receiving food highlighting the action must reflect/address the identified problem/s: • Refuse/reject refrigerated high risk foods delivered at more than 5°C (or as otherwise stated in your FSP) • Refuse/reject frozen produce not hard frozen • Refuse/reject hot food delivered at less than 60°C – unless you are convinced it has been at this temperature for less than two hours: note this food must be thrown out after it has spent four hours total (including delivery time) in this temperature range • Refuse/reject products which are not adequately marked with manufacturer's details • Refuse/reject food delivered in an unclean vehicle, or which is being delivered in a non-food vehicle such as a private car • Refuse/reject foods delivered to you mixed in with chemicals: this includes refusing/rejecting foods where the chemicals were sealed and unopened – food and chemicals must not be mixed together even in their original containers, drums.

Slide

Take corrective actions

Corrective action relating to storage of dry food may include:

- Respond to evidence of pest infestation
- Discard contaminated food
- Fix lighting, where required
- Revamp stock control where out-of-date stock is found

(Continued)

Slide 133

Slide No	Trainer Notes
133.	Trainer lists possible corrective action which may need to be taken in relation to storage of dry food/goods highlighting the action must reflect/address the identified problem/s: • Where there is evidence of pest or rodent infestation: ▪ Lay baits ▪ Engage the services of a licensed pest control company ▪ Investigate where they are getting in and make repairs – fit fly wire, fill in holes ▪ Record the action you take on the Corrective Action form • Throw away all infested/contaminated food • Up-date and/or repair lighting/globes/fluorescent tubes – if lighting is poor or not working properly • Revamp stock control measures – throw away out-of-date food; implement FIFO procedures. Class Activity – Discussion Trainer asks trainees: • What action might be able to be taken to address pest infestation?

Slide

Take corrective actions

- Allocate more space for dry goods storage
- Train staff
- Discard food with damaged packaging
- Revise cleaning protocols

Slide 134

Slide No	Trainer Notes
134.	Trainer continues listing possible corrective action which may need to be taken in relation to storage of dry food/goods highlighting the action must reflect/address the identified problem/s: • Allocate more space for dry storage of food where conditions are too crowded/cramped • Train staff in stock control procedures • Discard products with damaged packaging • Revise cleaning protocols – allocate more time, get more/better equipment and/or chemicals, provide training in cleaning, clean the area more frequently.

Slide

Take corrective actions

Corrective action relating to storage of refrigerated food may include:

- Discard food exceeding 2/4 rule
- Discard food beyond 'use by' dates
- Train staff
- Call in refrigeration mechanic

(Continued)

Slide 135

Slide No	Trainer Notes
135.	Trainer lists possible corrective action which may need to be taken in relation to storage of refrigerated food highlighting the action must reflect/address the identified problem/s: • Discard all food that exceeds the '2/4 rule' • Discard all food beyond its 'use by' date • Train staff in cleaning techniques and practices • Call in refrigeration mechanic where the refrigeration units are reading above 5°C: consider implementing a preventative maintenance schedule through a reputable refrigeration company. Class Activity – Question Trainer asks students to describe/explain the 2/4 rule.

Slide

Take corrective actions

- Discard contaminated food
- Revamp stock control
- Revamp cleaning

Slide 136

Slide No	Trainer Notes
136.	Trainer continues listing possible corrective action which may need to be taken in relation to storage of refrigerated food highlighting the action must reflect/address the identified problem/s: • Discard all food where there is evidence – or a belief – cross contamination has occurred • Revamp stock control procedures, as required – if out-of-date stock is identified • Revamp cleaning procedures, as necessary – where cool room/refrigerated units are unclean.

Slide

Take corrective actions

Corrective action relating to storage of frozen food may include:

- Thawed food below 5°C can be treated as refrigerated food
- Food at 5°C for 4 hours or less can be used if used immediately
- Food at 5°C+ for over 4 hours (or an indeterminate time) must be thrown out
- Discard all food exceeding 2/4 rule

(Continued)

Slide 137

Slide No	Trainer Notes
137.	Trainer lists possible corrective action which may need to be taken in relation to storage of frozen food highlighting the action must reflect/address the identified problem/s: • Where frozen food has thawed out but is still below 5°C, you are allowed to refrigerate it and then treat it as refrigerated food • Where frozen food has been allowed to reach 5°C or higher (perhaps the freezer has broken down or there has been an extended power failure) for less than four hours – you may use it if you do so immediately • If the frozen food has been at 5°C or more for more than four hours – throw it out • If the frozen food has been at 5°C or more for an indefinite amount of time – that is, you are not certain how long it has been at 5°C or above – discard it all • Discard all food that exceeds the '2/4 rule'. Class Activity – Discussion Trainer asks trainees: • What is the Temperature Danger Zone? • Why is it important in relation to food safety?

Slide

Take corrective actions

- Discard food beyond use-by dates
- Train staff as required
- Call refrigeration mechanic
- Discard contaminated food
- Revamp cleaning and stock control and rotation procedures

Slide 138

Slide No	Trainer Notes
138.	Trainer continues listing possible corrective action which may need to be taken in relation to storage of frozen food highlighting the action must reflect/address the identified problem/s: • Discard all food that is beyond its 'use by' date • Train staff in cleaning techniques and practices • Call in refrigeration mechanic where the freezer units are reading above -15°C: again, consider implementing a preventative maintenance schedule through a reputable refrigeration company • Discard all food where there is evidence – or a belief – cross contamination has occurred • Revamp stock control procedures, as required • Revamp cleaning procedures, as necessary.

Slide

Take corrective actions

Corrective action relating to thawing frozen food may include:

- Train staff to thaw food before cooking
- Train staff in acceptable thawing procedure options
- Discard food exceeding 2/4 rule
- Throw out food defrosted in unprotected condition
- Train staff not to re-freeze product

Slide 139

Slide No	Trainer Notes
139.	Trainer lists possible corrective action which may need to be taken in relation to thawing of frozen food highlighting the action must reflect/address the identified problem/s: • Train staff to wait until food is fully thawed before cooking • Train staff in proper thawing practices, including the need to plan defrosting needs • Discard all food that exceeds the '2/4 rule' • Throw out all food defrosted in an uncovered state, or which has defrosted in damaged packaging • Discard all food that has been thawed and re-frozen • Train staff not to re-freeze thawed product which has already been frozen once. Class Activity – Discussion Trainer asks trainees: • What are the three acceptable options for thawing frozen food? • What practices are not acceptable?

Slide

Take corrective actions

Corrective action relating to preparing food may include:

- Provide more time and resources
- Place advisory reminder signs in workplace
- Revamp procedures to reduce time food spends in Temperature Danger Zone
- Improve stock rotation

(Continued)

Slide 140

Slide No	Trainer Notes
140.	Trainer lists possible corrective action which may need to be taken in relation to preparing food highlighting the action must reflect/address the identified problem/s: • Supply sufficient time and resources to facilitate compliance with correct food handling practices – this may be gloves, extra utensils (knives, chopping boards, bowls), more time for hand washing • Put up signs to prompt/remind staff of correct/safe food handling practices • Revamp preparation procedures and practices so as to minimise time food spends in the Temperature Danger Zone – this may include spending time planning food preparation activities on a daily basis • Improve stock rotation procedures – if out-of-date items are being identified during this phase.

Slide

Take corrective actions

- Apply 2/4 rule
- Change cloths and swabs regularly
- Monitor staff performance and actions
- Train staff

Slide 141

Slide No	Trainer Notes
141.	Trainer continues listing possible corrective action which may need to be taken in relation to thawing of frozen food highlighting the action must reflect/address the identified problem/s: • Apply the '2/4 rule' • Change cloths/swabs regularly – at least hourly: consider using paper towels instead • Monitor the performance of individual staff members in relation to food preparation-food safety issues, and suggest improvements to practice where this is deemed necessary • Train staff as required. Class Activity – Discussion Trainer asks trainees: • What staff training might be required?

Slide

Take corrective actions

Corrective action relating to cooking food may include:

- Repair equipment when required
- Cook smaller batches of food
- Provide 'tasting spoons'
- Calibrate food thermometers regularly
- Train staff
- Cover food during cooking

Slide 142

Slide No	Trainer Notes
142.	Trainer lists possible corrective action which may need to be taken in relation to cooking food highlighting the action must reflect/address the identified problem/s: • Repair equipment where cooking equipment is functioning below required standards • Cook food in smaller batches – to reduce likelihood of producing left-over product • Provide special purpose tasting spoons • Verify thermometer readings – via calibration at least every six months • Train staff as required • Provide – and/or use – covers for food as it is cooked. Class Activity – Discussion Trainer asks trainees: • How should tasting spoons be used to maintain food hygiene/safety?

Slide

Take corrective actions

Corrective action relating to cooling hot food may include:

- Use ice baths
- Stir food
- Cover food while cooling
- Set alarms

(Continued)

Slide 143

Slide No	Trainer Notes
143.	Trainer lists possible corrective action which may need to be taken in relation to cooling hot food highlighting the action must reflect/address the identified problem/s: • Help hot foods to cool down by placing hot pots/containers into iced water baths • Stir wet dishes to help release heat • Cover cooling dishes • Set clocks, watches or alarms to notify of required timeframes.

Slide

Take corrective actions

- Notify other staff of products which are cooling at end-of-shift when “handing over”
- Calibrate food thermometers regularly
- Train staff
- Use workplace signs to advise and remind staff

Slide 144

Slide No	Trainer Notes
144.	Trainer continues listing possible corrective action which may need to be taken in relation to cooling hot food highlighting the action must reflect/address the identified problem/s: • Make sure new staff at any change of shift are notified in relation to any food that is cooling • Verify thermometer readings – via calibration every six months (minimum) • Train staff as required • Place signs around the workplace to remind staff of what is required in relation to the cooling of food. Class Activity – Discussion Trainer asks trainees: • How are food thermometers calibrated? • Why do they need to be calibrated? • With what frequency should they be calibrated?

Slide

Take corrective actions

Corrective action relating to storing and holding hot food may include:

- Train staff
- Revamp holding procedures to keep temperature above 60°C
- Check and service food holding units
- Pre-heat food before placement into pre-heated display units

(Continued)

Slide 145

Slide No	Trainer Notes
145.	Trainer lists possible corrective action which may need to be taken in relation to storing and holding hot food highlighting the action must reflect/address the identified problem/s: • Train staff as required – handling, heating, display, stock rotation and cleaning protocols • Revamp hot holding procedures to ensure food stays at or above 60°C • Check operational efficiency and accuracy of all hot holding equipment and have units serviced as required • Pre-heat all food properly (minimum 70°C for two minutes) prior to placing it into hot/pre-heated holding devices.

Slide

Take corrective actions

- Check temperatures of food using calibrated food thermometer
- Revise display protocols for food
- Revamp times when holding units are switched 'on'
- Operate units at higher temperatures

Slide 146

Slide No	Trainer Notes
146.	Trainer continues listing possible corrective action which may need to be taken in relation to storing and holding hot food highlighting the action must reflect/address the identified problem/s: • Ensure temperatures of all hot held food are being taken as required using a properly calibrated thermometer • Revise display protocols if tags are actually touching food • Revamp times when bain-maries and warmers are turned on – turn them on earlier to allow sufficient time for them to get to 60°C or above • Operate bain-maries and/or warmers at higher settings so as to reach 60°C.

Slide

Take corrective actions

Corrective action relating to storing and holding cold food may include:

- Train staff
- Revamp holding procedures to keep temperature at or below 5°C
- Check and service food holding units
- Ensure food is below 5°C before placement into pre-chilled display units

(Continued)

Slide 147

Slide No	Trainer Notes
147.	Trainer lists possible corrective action which may need to be taken in relation to storing and holding cold food highlighting the action must reflect/address the identified problem/s: • Train staff as required – handling, cooling, display, stock rotation and cleaning protocols • Revamp cold holding procedures to ensure food stays at or below 5°C • Check operational efficiency and accuracy of all cold holding equipment and have units serviced as required • Ensure all food that goes into cold display units is already at or below 5°C.

Slide

Take corrective actions

- Check temperatures of food using calibrated food thermometer
- Revise display protocols for food
- Revamp times when holding units are switched 'on'
- Operate units at lower temperatures

Slide 148

Slide No	Trainer Notes
148.	Trainer continues listing possible corrective action which may need to be taken in relation to storing and holding cold food highlighting the action must reflect/address the identified problem/s: • Ensure temperatures of all cold held food are being taken as required using a properly calibrated thermometer • Revise display protocols if tags are actually touching food • Revamp times when cold display units are turned on – turn them on earlier to allow sufficient time for them to get to 5°C or below • Operate units at lower settings so as to reach 5°C or less.

Slide

Take corrective actions

Corrective action relating to re-heating previously cooked food may include:

- Revamp re-heating procedures
- Heat faster
- Heat smaller portions
- Discard incorrectly re-heated food
- Train staff

Slide 149

Slide No	Trainer Notes
149.	Trainer lists possible corrective action which may need to be taken in relation to re-heating of previously cooked food highlighting the action must reflect/address the identified problem/s: • Revamp re-heating procedures to ensure 70°C for two minutes or higher is attained, and display/holding protocols ensure 60°C or higher is maintained • Alter re-heating practices to re-heat quicker and/or in smaller quantities • Throw out re-heated food that fails to reach a core temperature of 70°C or higher for at least two minutes • Train staff – as required.

Slide

Take corrective actions

Corrective action relating to packaging food may include:

- Discard dirty or damaged packaging
- Service packaging equipment
- Keep area clean
- Ensure required cleaning of equipment is undertaken
- Train staff
- Modify labeling
- Discard contaminated food

Slide 150

Slide No	Trainer Notes
150.	Trainer lists possible corrective action which may need to be taken in relation to packaging food highlighting the action must reflect/address the identified problem/s: • Dirty and damaged containers and other packaging materials are discarded • Service packaging equipment correctly and regularly – so it operates correctly • Ensure packaging area is kept pest free – consider using a pest control company • Verify the cleaning schedule for the packaging area is operating as intended – amend as required • Train staff – as required • Modify labelling so it conforms with requirements • Discard all food contaminated during the packaging/re-packaging process.

Slide

Take corrective actions

Corrective action relating to food service may include:

- Discard food exceeding 2/4 rule
- Train staff
- Purchase sufficient equipment and utensils
- Maintain and service holding equipment
- Alter holding temperatures

Slide 151

Slide No	Trainer Notes
151.	Trainer lists possible corrective action which may need to be taken in relation to food service highlighting the action must reflect/address the identified problem/s: • Discard all food exceeding the '2/4 rule' • Train staff in correct food handling and serving practices • Purchase sufficient equipment and utensils to enable separate utensils for each food item • Maintain food holding equipment so the required holding temperatures for hot and cold food can be obtained • Alter the settings on units so the required display/holding temperatures can be achieved.

Slide

Take corrective actions

Corrective action relating to self-service of food may include:

- Put public advice signage in place
- Consider alternative service options
- Allocate extra staff to monitor the area
- Discard food exceeding 2/4 rule

(Continued)

Slide 152

Slide No	Trainer Notes
152.	Trainer lists possible corrective action which may need to be taken in relation to the self-service of food highlighting the action must reflect/address the identified problem/s: • Prepare public food handling signage/advice • Consider alternative serving options if the safety/integrity of food cannot be guaranteed • Allocate additional staff to observe customer food handling practices • Discard all food that exceeds the '2/4 rule'.

Slide

Take corrective actions

- Train staff
- Ensure sufficient utensils for service
- Maintain food holding and display units
- Alter setting to hold food at correct temperatures

Slide 153

Slide No	Trainer Notes
153.	Trainer continues listing possible corrective action which may need to be taken in relation to the self-service of food highlighting the action must reflect/address the identified problem/s: • Train staff in correct monitoring procedures – and in appropriate customer relations skills to facilitate compliance with requirements • Purchase sufficient equipment and utensils to enable separate utensils for each food item • Maintain food holding equipment so the required holding temperatures for hot and cold food can be obtained • Alter the settings on units so the required display/holding temperatures can be achieved.

Slide

Take corrective actions

Corrective action relating to food transportation may include:

- Use 'food transport vehicles'
- Service vehicles regularly
- Deliver food within 2 hours
- Discard food exceeding 2/4 rule
- Discard contaminated food
- Train staff

Slide 154

Slide No	Trainer Notes
154.	Trainer lists possible corrective action which may need to be taken in relation to food transportation highlighting the action must reflect/address the identified problem/s: • Obtain and use specially designated 'Food Transport Vehicles' • Service Food Transport Vehicles regularly • Ensure food can be delivered within 2 hours • Throw out all food exceeding the '2/4 rule' • Discard any contaminated food items • Train staff as necessary.

Slide

Report risks

If you cannot fix a problem you must report it to (for example):

- Food Safety Supervisor
- Supervisor
- Manager
- Owner
- Food safety committee
- Head office

Slide 155

Slide No	Trainer Notes
155.	Trainer states staff who identify a food hygiene hazard are expected to take immediate action within their scope of authority to resolve the issue however not all hygiene hazards can be effectively addressed by staff because they may require action that extends beyond their designated scope of authority. Trainer advises where students cannot effectively address a situation it must be reported to 'the appropriate person' who may be: • The Food Safety Supervisor • A department or shift supervisor • The department or venue manager • The owner • Any member of the establishment food safety team/committee (where one exists) • Head office – this may be an option where the business is a large one that has numerous food outlets/sites and where the organisation operates its own laboratory that is central to establishing and maintaining food safety throughout all food sites. Class Activity – Guest Speaker Trainer arranges relevant Guest Speaker to: • Discuss protocols at their workplace for reporting food risks/hazards • Describe situations in which reports have been made • Provide sample reporting documentation

- | | |
|--|---|
| | <ul style="list-style-type: none">• Highlight need for reports to be made• Identify who reports may be made to at their venue• Explain contents of these reports. |
|--|---|

Slide

Report risks

Reports on hazards, risks and issues:

- Must be made immediately
- Can be made:
 - Face-to-face
 - Via telephone
 - Using email
 - Completing nominated form

Slide 156

Slide No	Trainer Notes
156.	Trainer highlights immediate verbal reports must be made as soon as the hazard has been identified and these can/may need to be followed up with written reports. Trainer notes acceptable ways to report are: • Verbally – face-to-face • Via the telephone • Using e-mail • Completing nominated food safety reports forms.

Slide

Report risks

When reporting:

- State the facts – as opposed to beliefs or ‘opinion’
- Be comprehensive
- Be specific
- Be prompt

Slide 157

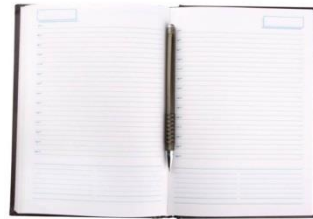

Slide No	Trainer Notes
157.	Trainer states when making a report (verbal or written) attention should be paid to: • Stating the facts as believed to be – for example, based on actual personal experience or personal observation: there is no room for bias, conjecture or making up things • Being comprehensive – giving all the information • Being specific – if possible, give dates, times, temperatures, supplier names, names of products, names of menu items, staff names • Being immediate – where food safety is concerned there is always a need for reports to be made immediately/as soon as possible. Class Activity – Handout Trainer distributes and discusses a completed/sample report regarding an identified food hazard, risk, problem or out-of-control situation.

Slide

Complete records

FSPs may require the following records to be completed:

- 'Approved Suppliers List'
- 'Goods Receiving Form'
- 'Goods Rejected or Returned Form'
- 'Cold Storage Temperature Log'
- 'Ready-To-Eat Food On Display Log'

(Continued)

Slide 158

Slide No	Trainer Notes
158.	Trainer explains the FSP for the venue will determine/identify and provide examples of food safety records to be kept, which may include: • Approved Food Suppliers List – listing those businesses from whom the food may be bought • Goods Receiving Form – recording a proportion (say, 5%) of inwards food deliveries to the property • Goods Rejected Form – detailing which have been delivered to the venue but refused/rejected • Cold Storage Temperature Log – recording the daily temperatures of fridges, freezers and cool rooms • Ready To Eat Food On Display Log – recording the daily temperatures of both hot and cold foods which are on display. Class Activity – Handouts, Explanations and Demonstrations Trainer obtains sample food safety records as identified on the slide and: • Distributes them to students • Explains their role • Demonstrates how to complete them.

Slide

Complete records

- 'Hot Display Temperature Log'
- 'Cold Display Temperature Log'
- 'Equipment Calibration Log'
- 'Internal Review – Process Temperature Log'
- CAR

Slide 159

Slide No	Trainer Notes
159.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required. ● Hot Display Temperature Log – recording the daily temperatures of hot foods on display in units such as bain maries and warmers ● Cold Display Temperature Log – recording the daily temperatures of cold foods in units such as salad wells or refrigerated display cabinets ● Equipment Calibration Log – detailing testing of probe thermometers to prove they are providing accurate readings, or to show they need repair/replacement ● Internal Review – Process Temperature Log – detailing on some regular basis (such as once every two weeks) the processing of a food item by tracking and recording the processes used (such as thawing, preparing, cooking, cooling, re-heating, displaying, serving) and recording the times and temperatures involved at each process step ● Corrective Action form – detailing action taken in response to an out-of-control situation. Class Activity – Handouts, Explanations and Demonstrations Trainer obtains sample food safety records as identified on the slide and: ● Distributes them to students ● Explains their role ● Demonstrates how to complete them.

Slide

Summary – Element 4

When following food safety program:

- Obtain, read and understand the venue-specific FSP
- Identify personal responsibilities under the plan
- Implement required pest control procedures
- Handle waste in accordance with requirements

(Continued)

Slide 160

Slide No	Trainer Notes
160.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Summary – Element 4

- Be alert to potential for poor organizational practices
- Implement strategies to identify non-compliance with FSP requirements and poor organizational practices
- Realise impact of non-compliance on people and the business
- Determine personal scope of responsibility for food safety action

(Continued)

Slide 161

Slide No	Trainer Notes
161.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required.

Slide

Summary – Element 4

- Take suitable corrective action to effectively address identified out-of-control situations
- Refer or report issues you cannot remedy
- Complete food safety records as and when required

Slide 162

Slide No	Trainer Notes
162.	Trainer provides a recap of the Element asking questions to check trainee understanding and responding to questions from trainees, as required. Trainer thanks trainees for their attention and encourages them to apply course content as required in their workplace activities.

Recommended training equipment

UV hand washing demonstration kit

Facilities to enable hand washing and drying

A range of chemicals used for cleaning etc. in the kitchen – such as:

- Detergents
- Sanitisers
- De-greasers
- Deodorants
- Disinfectants
- Drying aids
- Wetting agents
- De-naturing agent – for use in beer drip trays.

Sample Material Safety Data Sheets

Sample cleaning instructions for food equipment, utensils and areas

Examples of Personal Protective Equipment and clothing needed for handling chemicals (cleaning agents) and working with food such as aprons, overalls, hats, hair nets, beard snoods, gauntlets, masks

Access to food-related areas such as dry goods store, refrigerated storage and cool rooms, and frozen storage, kitchen and delivery and service areas

Disposable gloves

Sample single-use items

Availability of a wide range of food-related equipment, machinery, utensils, crockery and cutlery necessary for food processes such as receiving food, preparing/processing/weighing and cooking food, packaging food, reheating food, thawing food, storing and holding hot and cold food, serving food for in-house and take-away consumption

Microwave for demonstration of defrosting

Food/probe thermometer, directions for use and facilities to calibrate same

Infra-red thermometer to show limitations of using them

Sanitising wipes for cleaning/sanitising probe thermometers

Workplace food safety posters

Colour-coded chopping boards and posters regarding use of same

Sample copy of local (or mandatory) Food Safety Plan

Internal and external waste bins

Bin liners

Sample enterprise requirements as they apply to:

- Food handling protocols
- Cleaning – cleaning instructions/SOPs/WIs and cleaning schedules
- Food safety records
- Monitoring and reporting
- Inspection checklists and audits.

Waterproof dressings and coloured band aids

A range of foods – in particular:

- Potentially hazardous/high-risk foods
- Frozen foods
- Portion control units.

Resources for controlling pests – such as fly zappers, fly sprays, baits, fogging bombs, traps

Sample food specifications

Sample food safety records – including:

- Approved Food Suppliers List
- Goods Receiving Form
- Goods rejected Form
- Cold Storage Temperature Log
- Ready To Eat Food On Display Log
- Hot Display Temperature Log
- Cold Display Temperature Log
- Equipment Calibration Log
- Internal Review – Process Temperature Log
- Corrective Action form.

Instructions for Trainers for using PowerPoint – Presenter View

Connect your laptop or computer to your projector equipment as per manufacturers' instructions.

In PowerPoint, on the **Slide Show** menu, click **Set up Show**.

Under Multiple monitors, select the Show Presenter View check box.

In the **Display slide show** on list, click the monitor you want the slide show presentation to appear on.

Source: <http://office.microsoft.com>

Note:

In Presenter View:

You see your notes and have full control of the presentation

Your trainees only see the slide projected on to the screen

More Information

You can obtain more information on how to use PowerPoint from the Microsoft Online Help Centre, available at:

<http://office.microsoft.com/training/training.aspx?AssetID=RC011298761033>

Note Regarding Currency of URLs

Please note that where references have been made to URLs in these training resources trainers will need to verify that the resource or document referred to is still current on the internet. Trainers should endeavour, where possible, to source similar alternative examples of material where it is found that either the website or the document in question is no longer available online.
