Competency Based Training (CBT) and assessment - An introduction for trainers

Competency

Competency refers to the ability to perform particular tasks and duties to the standard of performance expected in the workplace.

Competency requires the application of specified knowledge, skills and attitudes relevant to effective participation, consistently over time and in the workplace environment.

The essential skills and knowledge are either identified separately or combined.

Knowledge identifies what a person needs to know to perform the work in an informed and effective manner.

Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Attitude describes the founding reasons behind the need for certain knowledge or why skills are performed in a specified manner.

Competency covers all aspects of workplace performance and involves:

- Performing individual tasks
- Managing a range of different tasks
- Responding to contingencies or breakdowns
- Dealing with the responsibilities of the workplace
- Working with others.

Unit of Competency

Like with any training qualification or program, a range of subject topics are identified that focus on the ability in a certain work area, responsibility or function.

Each manual focuses on a specific unit of competency that applies in the hospitality workplace.

In this manual a unit of competency is identified as a 'unit'.

Each unit of competency identifies a discrete workplace requirement and includes:

- Knowledge and skills that underpin competency
- Language, literacy and numeracy
- Occupational safety and health requirements.

Each unit of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Element of Competency

An element of competency describes the essential outcomes within a unit of competency.

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

In this manual elements of competency are identified as an 'element'.

Performance criteria

Performance criteria indicate the standard of performance that is required to demonstrate achievement within an element of competency. The standards reflect identified industry skill needs.

Performance criteria will be made up of certain specified skills, knowledge and attitudes.

Learning

For the purpose of this manual learning incorporates two key activities:

- Training
- Assessment.

Both of these activities will be discussed in detail in this introduction.

Today training and assessment can be delivered in a variety of ways. It may be provided to participants:

- On-the-job – in the workplace
- Off-the-job – at an educational institution or dedicated training environment
- As a combination of these two options.

No longer is it necessary for learners to be absent from the workplace for long periods of time in order to obtain recognised and accredited qualifications.

Learning Approaches

This manual will identify two avenues to facilitate learning:

Competency Based Training (CBT)

This is the strategy of developing a participant's competency.

Educational institutions utilise a range of training strategies to ensure that participants are able to gain the knowledge and skills required for successful:

- Completion of the training program or qualification
- Implementation in the workplace.

The strategies selected should be chosen based on suitability and the learning styles of participants.

Competency Based Assessment (CBA)

This is the strategy of assessing competency of a participant.

Educational institutions utilise a range of assessment strategies to ensure that participants are assessed in a manner that demonstrates validity, fairness, reliability, flexibility and fairness of assessment processes.

Flexibility in Learning

It is important to note that flexibility in training and assessment strategies is required to meet the needs of participants who may have learning difficulties. The strategies used will vary, taking into account the needs of individual participants with learning difficulties. However they will be applied in a manner which does not discriminate against the participant or the participant body as a whole.

Catering for Participant Diversity

Participants have diverse backgrounds, needs and interests. When planning training and assessment activities to cater for individual differences, trainers and assessors should:

- Consider individuals' experiences, learning styles and interests
- Develop questions and activities that are aimed at different levels of ability
- Modify the expectations for some participants
- Provide opportunities for a variety of forms of participation, such as individual, pair and small group activities
- Assess participants based on individual progress and outcomes.

The diversity among participants also provides a good reason for building up a learning community in which participants support each other's learning.

Participant Centred Learning

This involves taking into account structuring training and assessment that:

- *Builds on strengths* – Training environments need to demonstrate the many positive features of local participants (such as the attribution of academic success to effort, and the social nature of achievement motivation) and of their trainers (such as a strong emphasis on subject disciplines and moral responsibility). These strengths and uniqueness of local participants and trainers should be acknowledged and treasured
- *Acknowledges prior knowledge and experience* – The learning activities should be planned with participants' prior knowledge and experience in mind
- *Understands learning objectives* – Each learning activity should have clear learning objectives and participants should be informed of them at the outset. Trainers should also be clear about the purpose of assignments and explain their significance to participants
- *Teaches for understanding* – The pedagogies chosen should aim at enabling participants to act and think flexibly with what they know
- *Teaches for independent learning* – Generic skills and reflection should be nurtured through learning activities in appropriate contexts of the curriculum. Participants should be encouraged to take responsibility for their own learning

- *Enhances motivation* – Learning is most effective when participants are motivated. Various strategies should be used to arouse the interest of participants
- *Makes effective use of resources* – A variety of teaching resources can be employed as tools for learning
- *Maximises engagement* – In conducting learning activities, it is important for the minds of participants to be actively engaged
- *Aligns assessment with learning and teaching* – Feedback and assessment should be an integral part of learning and teaching
- *Caters for learner diversity* – Trainers should be aware that participants have different characteristics and strengths and try to nurture these rather than impose a standard set of expectations.

Active Learning

The goal of nurturing independent learning in participants does not imply that they always have to work in isolation or solely in a classroom. On the contrary, the construction of knowledge in tourism and hospitality studies can often best be carried out in collaboration with others in the field. Sharing experiences, insights and views on issues of common concern, and working together to collect information through conducting investigative studies in the field (active learning) can contribute a lot to their eventual success.

Active learning has an important part to play in fostering a sense of community in the class. First, to operate successfully, a learning community requires an ethos of acceptance and a sense of trust among participants, and between them and their trainers. Trainers can help to foster acceptance and trust through encouragement and personal example, and by allowing participants to take risks as they explore and articulate their views, however immature these may appear to be. Participants also come to realise that their classmates (and their trainers) are partners in learning and solving.

Trainers can also encourage cooperative learning by designing appropriate group learning tasks, which include, for example, collecting background information, conducting small-scale surveys, or producing media presentations on certain issues and themes. Participants need to be reminded that, while they should work towards successful completion of the field tasks, developing positive peer relationships in the process is an important objective of all group work.

Competency Based Training (CBT)

Principle of Competency Based Training

Competency based training is aimed at developing the knowledge, skills and attitudes of participants, through a variety of training tools.

Training Strategies

The aims of this curriculum are to enable participants to:

- Undertake a variety of subject courses that are relevant to industry in the current environment
- Learn current industry skills, information and trends relevant to industry
- Learn through a range of practical and theoretical approaches
- Be able to identify, explore and solve issues in a productive manner

- Be able to become confident, equipped and flexible managers of the future
- Be 'job ready' and a valuable employee in the industry upon graduation of any qualification level.

To ensure participants are able to gain the knowledge and skills required to meet competency in each unit of competency in the qualification, a range of training delivery modes are used.

Types of Training

In choosing learning and teaching strategies, trainers should take into account the practical, complex and multi-disciplinary nature of the subject area, as well as their participant's prior knowledge, learning styles and abilities.

Training outcomes can be attained by utilising one or more delivery methods:

Lecture/Tutorial

This is a common method of training involving transfer of information from the trainer to the participants. It is an effective approach to introduce new concepts or information to the learners and also to build upon the existing knowledge. The listener is expected to reflect on the subject and seek clarifications on the doubts.

Demonstration

Demonstration is a very effective training method that involves a trainer showing a participant how to perform a task or activity. Through a visual demonstration, trainers may also explain reasoning behind certain actions or provide supplementary information to help facilitate understanding.

Group Discussions

Brainstorming in which all the members in a group express their ideas, views and opinions on a given topic, is a free flow and exchange of knowledge among the participants and the trainer. The discussion is carried out by the group on the basis of their own experience, perceptions and values. This will facilitate acquiring new knowledge. When everybody is expected to participate in the group discussion, even the introverted persons will also get stimulated and try to articulate their feelings.

The ideas that emerge in the discussions should be noted down and presentations are to be made by the groups. Sometimes consensus needs to be arrived at on a given topic. Group discussions are to be held under the moderation of a leader guided by the trainer. Group discussion technique triggers thinking process, encourages interactions and enhances communication skills.

Role Play

This is a common and very effective method of bringing into the classroom real life situations, which may not otherwise be possible. Participants are made to enact a particular role so as to give a real feel of the roles they may be called upon to play. This enables participants to understand the behaviour of others as well as their own emotions and feelings. The instructor must brief the role players on what is expected of them. The role player may either be given a ready-made script, which they can memorise and enact, or they may be required to develop their own scripts around a given situation. This technique is extremely useful in understanding creative selling techniques and human relations. It can be entertaining and energising and it helps the reserved and less literate to express their feelings.

Simulation Games

When trainees need to become aware of something that they have not been conscious of, simulations can be a useful mechanism. Simulation games are a method based on "here and now" experience shared by all the participants. The games focus on the participation of the trainees and their willingness to share their ideas with others. A "near real life" situation is created providing an opportunity to which they apply themselves by adopting certain behaviour. They then experience the impact of their behaviour on the situation. It is carried out to generate responses and reactions based on the real feelings of the participants, which are subsequently analysed by the trainer.

While use of simulation games can result in very effective learning, it needs considerable trainer competence to analyse the situations.

Individual /Group Exercises

Exercises are often introduced to find out how much the participant has assimilated. This method involves imparting instructions to participants on a particular subject through use of written exercises. In the group exercises, the entire class is divided into small groups, and members are asked to collaborate to arrive at a consensus or solution to a problem.

Case Study

This is a training method that enables the trainer and the participant to experience a real life situation. It may be on account of events in the past or situations in the present, in which there may be one or more problems to be solved and decisions to be taken. The basic objective of a case study is to help participants diagnose, analyse and/or solve a particular problem and to make them internalise the critical inputs delivered in the training. Questions are generally given at the end of the case study to direct the participants and to stimulate their thinking towards possible solutions. Studies may be presented in written or verbal form.

Field Visit

This involves a carefully planned visit or tour to a place of learning or interest. The idea is to give first-hand knowledge by personal observation of field situations, and to relate theory with practice. The emphasis is on observing, exploring, asking questions and understanding. The trainer should remember to brief the participants about what they should observe and about the customs and norms that need to be respected.

Group Presentation

The participants are asked to work in groups and produce the results and findings of their group work to the members of another sub-group. By this method participants get a good picture of each other's views and perceptions on the topic and they are able to compare them with their own point of view. The pooling and sharing of findings enriches the discussion and learning process.

Practice Sessions

This method is of paramount importance for skills training. Participants are provided with an opportunity to practice in a controlled situation what they have learnt. It could be real life or through a make-believe situation.

Games

This is a group process and includes those methods that involve usually fun-based activity, aimed at conveying feelings and experiences, which are everyday in nature, and applying them within the game being played. A game has set rules and regulations, and may or may not include a competitive element. After the game is played, it is essential that the participants be debriefed and their lessons and experiences consolidated by the trainer.

Research

Trainers may require learners to undertake research activities, including online research, to gather information or further understanding about a specific subject area.

Competency Based Assessment (CBA)

Principle of Competency Based Assessment

Competency based assessment is aimed at compiling a list of evidence that shows that a person is competent in a particular unit of competency.

Competencies are gained through a multitude of ways including:

- Training and development programs
- Formal education
- Life experience
- Apprenticeships
- On-the-job experience
- Self-help programs.

All of these together contribute to job competence in a person. Ultimately, assessors and participants work together, through the 'collection of evidence' in determining overall competence.

This evidence can be collected:

- Using different formats
- Using different people
- Collected over a period of time.

The assessor, who is ideally someone with considerable experience in the area being assessed, reviews the evidence and verifies the person as being competent or not.

Flexibility in Assessment

Whilst allocated assessment tools have been identified for this subject, all attempts are made to determine competency and suitable alternate assessment tools may be used, according to the requirements of the participant.

The assessment needs to be equitable for all participants, taking into account their cultural and linguistic needs.

Competency must be proven regardless of:

- Language
- Delivery Method
- Assessment Method.

Assessment Objectives

The assessment tools used for subjects are designed to determine competency against the 'elements of competency' and their associated 'performance criteria'.

The assessment tools are used to identify sufficient:

- a) Knowledge, including underpinning knowledge
- b) Skills
- c) Attitudes

Assessment tools are activities that trainees are required to undertake to prove participant competency in this subject.

All assessments must be completed satisfactorily for participants to obtain competence in this subject. There are no exceptions to this requirement, however, it is possible that in some cases several assessment items may be combined and assessed together.

Types of Assessment

Allocated Assessment Tools

There are a number of assessment tools that are used to determine competency in this subject:

- Work projects
- Written questions
- Oral questions
- Third Party Report
- Observation Checklist.

Instructions on how assessors should conduct these assessment methods are explained in the Assessment Manuals.

Alternative Assessment Tools

Whilst this subject has identified assessment tools, as indicated above, this does not restrict the assessor from using different assessment methods to measure the competency of a participant.

Evidence is simply proof that the assessor gathers to show participants can actually do what they are required to do.

Whilst there is a distinct requirement for participants to demonstrate competency, there are many and diverse sources of evidence available to the assessor.

Ongoing performance at work, as verified by a supervisor or physical evidence, can count towards assessment. Additionally, the assessor can talk to customers or work colleagues to gather evidence about performance.

A range of assessment methods to assess competency include:

- Practical demonstrations
- Practical demonstrations in simulated work conditions
- Problem solving
- Portfolios of evidence
- Critical incident reports
- Journals
- Oral presentations
- Interviews
- Videos
- Visuals: slides, audio tapes
- Case studies
- Log books
- Projects
- Role plays
- Group projects
- Group discussions
- Examinations.

Recognition of Prior Learning

Recognition of Prior Learning is the process that gives current industry professionals who do not have a formal qualification, the opportunity to benchmark their extensive skills and experience against the standards set out in each unit of competency/subject.

Also known as a Skills Recognition Audit (SRA), this process is a learning and assessment pathway which encompasses:

- Recognition of Current Competencies (RCC)
- Skills auditing
- Gap analysis and training
- Credit transfer.

Assessing competency

As mentioned, assessment is the process of identifying a participant's current knowledge, skills and attitudes sets against all elements of competency within a unit of competency. Traditionally in education, grades or marks were given to participants, dependent on how many questions the participant successfully answered in an assessment tool.

Competency based assessment does not award grades, but simply identifies if the participant has the knowledge, skills and attitudes to undertake the required task to the specified standard.

Therefore, when assessing competency, an assessor has two possible results that can be awarded:

- Pass Competent (PC)
- Not Yet Competent (NYC).

Pass Competent (PC)

If the participant is able to successfully answer or demonstrate what is required, to the expected standards of the performance criteria, they will be deemed as 'Pass Competent' (PC).

The assessor will award a 'Pass Competent' (PC) if they feel the participant has the necessary knowledge, skills and attitudes in all assessment tasks for a unit.

Not Yet Competent' (NYC)

If the participant is unable to answer or demonstrate competency to the desired standard, they will be deemed to be 'Not Yet Competent' (NYC).

This does not mean the participant will need to complete all the assessment tasks again. The focus will be on the specific assessment tasks that were not performed to the expected standards.

The participant may be required to:

- a) Undertake further training or instruction
- b) Undertake the assessment task again until they are deemed to be 'Pass Competent'.

Competency standard

UNIT TITLE: Operate a cellar system		NOMINAL HOURS: 45
UNIT NUMBER: D1.HBS.CL5.05		
UNIT DESCRIPTOR: This unit deals with the skills and knowledge required to operate a cellar system within the hotel industries workplace context		
ELEMENTS AND PERFORMANCE CRITERIA	UNIT VARIABLE AND ASSESSMENT GUIDE	
Element 1: Operate and maintain bulk dispensing systems 1.1 Operate <i>bulk dispensing systems</i> in accordance with manufacturer's instructions and safety requirements 1.2 Monitor temperature, carbonation and pump pressure 1.3 Clean connectors, extractors and heads hygienically 1.4 Set up nitrogen and integrated systems safely in accordance with manufacturer's specifications 1.5 Identify faulty products and product delivery problems promptly and implement corrective action	Unit Variables The Unit Variables provide advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment This unit applies to all industry sectors that require to operate a cellar system within the labour divisions of the hotel and travel industries and may include: 1. Food and Beverage Service <i>Bulk dispensing systems</i> may include: • Beer • Spirits • Wine • Post-mix syrups. <i>Refrigeration systems</i> may include: • Cold rooms • Cabinets	

Element 2: Operate and maintain beer reticulation systems 2.1 Operate and clean beer reticulation systems in accordance with manufacturer's instructions 2.2 Follow safety procedures regarding handling, connecting and storing of gas Element 3: Use and maintain refrigeration systems 3.1 Measure refrigerator temperatures accurately and adjust correctly to comply with product requirements 3.2 Clean and maintain <i>refrigerator components</i> 3.3 Set or re-set walk-in alarms to manufacturer's specifications 3.4 Recognise and repair/report <i>basic mechanical faults</i> in accordance with enterprise procedures	• Instantaneous coolers • Portable coolers. <i>Refrigerator components</i> may include: • Vents, coils and filters • Seals and catches. <i>Basic mechanical faults</i> may include: • Control system faults • Error codes. <i>Cellar products</i> may include: • Beers • Spirits • Wine • Post-mix syrups. <i>Appropriate person or people</i> may include: • Manager • Maintenance personnel on site • Specialist trades people. Assessment Guide The following skills and knowledge must be assessed as part of this unit: • Knowledge of potential faults • Knowledge of the shelf life of cellar products • Knowledge of the correct handling and storage of cellar products • Knowledge of the potential dangers of working with gas and pressure • Knowledge of the specific safety requirements of the cellar • Demonstrated ability to operate a cellar system.
---	---

Element 4: Monitor quality of cellar products 4.1 Test regularly quality of <i>cellar products</i> and identify faults 4.2 Make adjustments within scope of individual responsibility or report faults to the <i>appropriate person or people</i> 4.3 Use bin and keg card systems to assist in monitoring the quality of products and controlling stock 4.4 Keep cellar tidy, clean and free from litter 4.5 Monitor cellar temperature	Linkages To Other Units • Receive and store stock • Operate a bar facility • Manage responsible service of alcohol • Process liquor sales at a bar facility. Critical Aspects of Assessment Evidence of the following is essential: • Demonstrated understanding of the safety requirements in relation to operating the cellar • Demonstrated ability to maintain the quality of products stored in the cellar in accordance with enterprise procedures and systems • Demonstrated ability to identify faults/problems and where appropriate to situation and level of responsibility, rectify identified faults/problems • Demonstrated ability to keep the cellar clean, tidy and hygienic. Context of Assessment This unit may be assessed on or off the job • Assessment should include practical demonstration of the ability to operate a cellar system either in the workplace or through a simulation activity, supported by a range of methods to assess underpinning knowledge • Assessment must relate to the individual's work area, job role and area of responsibility • Assessment must include project or work activities that allow the candidate to respond to multiple and varying workplace situations that require the candidate to operate a cellar system. Resource Implications Training and assessment to include access to a real or simulated workplace; and access to workplace standards, procedures, policies, guidelines, tools and equipment.
--	---

Assessment Methods

The following methods may be used to assess competency for this unit:

- Case studies
- Observation of practical candidate performance
- Oral and written questions
- Portfolio evidence
- Problem solving
- Role plays
- Third party reports completed by a supervisor
- Project and assignment work.

Key Competencies in this Unit

Level 1 = competence to undertake tasks effectively

Level 2 = competence to manage tasks

Level 3 = competence to use concepts for evaluating

Key Competencies	Level	Examples
Collecting, organising and analysing information	1	Identify the storage requirements and shelf life of cellar products
Communicating ideas and information	0	
Planning and organising activities	2	Plan appropriate cellar maintenance activities
Working with others and in teams	1	Communicate with other co-workers

	Using mathematical ideas and techniques	0	
	Solving problems	1	Identify and repair basic mechanical faults
	Using technology	0	

Notes and PowerPoint slides

OPERATE A CELLAR SYSTEM

D1.HBS.CL5.05

Slide 1

Slide No	Trainer Notes
----------	---------------

1.	Trainer welcomes students to class.
----	-------------------------------------

Slide

Subject Elements

This unit comprises four Elements:

- Operate and maintain bulk dispensing systems
- Operate and maintain beer reticulation systems
- Use and maintain refrigeration systems
- Monitor quality of cellar products

Slide 2

Slide No	Trainer Notes
2.	Trainer advises this Unit comprises four Elements, as listed on the slide explaining: • Each Element comprises a number of Performance Criteria which will be identified throughout the class and explained in detail • Trainees can obtain more detail from their Trainee Manual • At times the course presents advice and information about various protocols but where their workplace requirements differ to what is presented, the workplace practices and standards, as well as policies and procedures must be observed.

Slide

Assessment

Assessment for this unit may include:

- Oral questions
- Written questions
- Work projects
- Workplace observation of practical skills
- Practical exercises
- Formal report from supervisor

Slide 3

Slide No	Trainer Notes
3.	Trainer advises that assessment for this Unit may take several forms all of which are aimed at verifying they have achieved competency for the Unit as required. Trainer indicates the methods of assessment that will be applied to them for this Unit.

Slide

Element 1:

Operate and maintain bulk dispensing systems

Slide 4

Slide No

Trainer Notes

4.

Introduce topic.

Class Activity – General Discussion

Ask general questions:

- What is a cellar?
- What equipment is associated with a cellar?
- What bulk dispensing systems are used in a bar?

Slide

Operate and maintain bulk dispensing systems

Performance Criteria for this Element are:

- Operate bulk dispensing systems in accordance with manufacturer's instructions and safety requirements ✓
- Monitor temperature, carbonation and pump pressure ✓
- Clean connectors, extractors and heads hygienically ✓
- Set up nitrogen and integrated systems safely in accordance with manufacturer's specifications ✓
- Identify faulty products and product delivery problems promptly and implement corrective action ✓

Slide 5

Slide No	Trainer Notes
5.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Purpose of bar operation

It is essential that any bar operation is able to prepare and serve beverages:

- In a desired state
- Consistently
- In a timely manner
- To maximise profits

Slide 6

Slide No

Trainer Notes

6.

Class Activity – Questions

- What is involved in achieving this purpose?
- If you were a bar manager what would be the objectives you would have?

Slide

The cellar area

Cellar area

This is the main area designed to store alcohol that is to be served in a bar operation.

- What equipment and items are found in a cellar?

Slide 7

Slide No	Trainer Notes
7.	Class Activity – Question and Visit of cellar - Answer the question in the slide - Trainer to arrange visit of cellar.

Slide

The cellar area

Items found in cellar area

- Wine casks, bottles and bulk boxes
- Beer kegs, bottles, cans and cartons
- Spirit bottles and bulk containers
- Soft drink bottles, cans and bulk boxes
- Juices
- Milk
- Snacks

Slide 8

Slide No	Trainer Notes
8.	Class Activity – Visit of cellar • Trainer to arrange visit of cellar • Discuss the purpose of these items as part of cellar visit.

Slide

Bulk dispensing systems

Importance of bulk dispensing systems

- One of the main components of a cellar operation is the use of bulk dispensing systems
- In order to be able to serve large volumes of beverages in an appropriate time, most establishments will use bulk dispensing systems

Slide 9

Slide No	Trainer Notes
9.	Class Activity – Questions • What is served using bulk dispensing systems? • What equipment is used in bulk dispensing systems?

Slide

Bulk dispensing systems

Benefits of bulk dispensing systems

- Provides accurate and consistent drink portion sizes
- Improves speed of beverage dispensing
- Increases volume of sales
- Improves efficiency for staff
- Reduces waiting time for customers
- Provides a clear record of drinks poured by station, shift and staff member

Slide 10

Slide No	Trainer Notes
10.	Class Activity – Discuss benefits and disadvantages ● Discuss the benefits of bulk dispensing systems ● What disadvantages are there of these systems?

Slide

Bulk dispensing systems

Types of bulk dispensing systems

These may include:

- Beer
- Spirits
- Wine
- Post-mix syrups

Slide 11

Slide No

Trainer Notes

11.

Class Activity – Discussion

- Discuss the different types of systems.

Slide

Beer dispensing systems

Beer system

- Keg beer is the most common bulk beer dispensing system
- Keg beer is a term for beer which is served from a pressurised keg

Slide 12

Slide No

Trainer Notes

12.

Class Activity – Discussion

- What is the benefit of using kegs?
- How is beer distributed from kegs to the customer?

Slide

Spirit dispensing systems

Spirits system

Electronic dispensing units (EDU) are becoming popular as it not only makes the pouring of spirits more consistent and accurate, but an easier process.

- Bottle dispensing units
- Bulk dispensing units

Slide 13

Slide No	Trainer Notes
13.	Class Activity – Discussion • What is the benefit of these spirit systems? • What is the difference between bottle and bulk dispensing units? • What is the common measurement dispensed by these units?

Slide

Spirit dispensing systems

Benefits of dispensing units

There are many benefits of using electronic spirit dispensing systems including:

- Simple bottle loading and replacement
- Reduced wastage of spirits
- Easy assembly of minimal parts for quick washing and maintenance
- Factory-set displacement valve and clear viewing bowl ensure accurate measures every time

Slide 14

Slide No	Trainer Notes
14.	Class Activity – Discuss benefits and disadvantages of spirit dispensing equipment • Discuss the benefits of spirit dispensing systems • What disadvantages are there of these systems?

Slide

Spirit dispensing systems

Benefits of dispensing units

- Dispensing indicator lights guarantee a fool-proof system
- Digital counters record every shot dispensed for accurate assessment checks
- Low impact, single-touch button makes pouring simple
- Reliable power supply unit with lockable keys for maximum security

Slide 15

Slide No	Trainer Notes
15.	Class Activity – Discuss benefits and disadvantages of spirit dispensing equipment • Discuss the benefits of spirit dispensing systems • What disadvantages are there of these systems?

Slide

Wine dispensing systems

Increased trend of bulk wine dispensing systems

Bulk wine dispensing systems have become a great revenue earner for many beverage establishments.

- What equipment is used in these systems?
- How are they beneficial?
- How do they differ from bottled wine?

Slide 16

Slide No	Trainer Notes
16.	Class Activity – Discuss benefits and disadvantages of bulk wine dispensing equipment & Research activity • Discuss the benefits of bulk wine dispensing systems • What disadvantages are there of these systems? • Trainer to get audience to research different types of wine dispensing systems and associated costs.

Slide

Soda dispensing systems

Post-mix system

A post mix system is the collective of equipment used to serve high volumes of carbonated beverages.

- What equipment is associated with these systems?
- What beverages are served using a post-mix system?
- What is the difference between 'pre-mix' and 'post-mix' systems?

Slide 17

Slide No	Trainer Notes
17.	Class Activity – Discuss benefits and disadvantages of post mix systems • Discuss the benefits of post mix systems • What disadvantages are there of these systems?

Slide

Cellar equipment

Other components of a cellar

- Cool room
- Transfer leads
- Couplers
- Connectors
- Gas regulators
- Chemicals, cleaning equipment and procedures
- Safety goggles and gloves
- Approved cleaning keg or dosing unit
- Appropriate stock

Slide 18

Slide No

Trainer Notes

18.

Class Activity – Discussion and demonstration

- Discuss what these pieces of equipment are used for
- Trainer to demonstrate these items and their uses.

Slide

Role of cellar attendant

Bulk Beverage system

- Cleaning and maintaining the draft beer system and keeping records up to date of equipment servicing
- Monitoring the quality, temperature and service of beer in bars
- Ability to find and correct faults in the draft beer system

Slide 19

Slide No	Trainer Notes
19.	Class Activity – Discuss role of Cellar Attendant • Discuss the duties of a cellar attendant.

Slide

Role of cellar attendant

Bulk Beverage system

- Monitoring bulk post mix, wine and spirit systems
- Observing current Standards for occupational health and safety including the safe use of gas and chemicals and the hygienic handling of alcohol

Slide 20

Slide No

Trainer Notes

20.

Class Activity – Discuss role of Cellar Attendant

- Discuss the duties of a cellar attendant.

Slide

Role of cellar attendant

Stock control

- Knowledge of all liquor groups and correct storage procedures for stock
- Ordering stock from suppliers
- Supplying stock to bars
- Receiving, checking and storing deliveries, checking invoices and delivery notes and dealing with any discrepancies

Slide 21

Slide No	Trainer Notes
21.	Class Activity – Discuss role of Cellar Attendant • Discuss the duties of a cellar attendant.

Slide

Role of cellar attendant

Stock control

- Maintaining the cellar records of all stock coming in and going out
- Conducting regular stock takes
- Keeping all cellar and storage areas locked and controlling access to the keys
- Rotating and storing stock correctly to avoid deterioration or spoilage

Slide 22

Slide No

Trainer Notes

22.

Class Activity – Discuss role of Cellar Attendant

- Discuss the duties of a cellar attendant.

Slide

Cellar attendant safety

Safety guidelines for the Cellar Attendant:

- Wear safety boots
- Wear Personal Protective Equipment when handling chemicals
- Beware of CO₂ gas leaks
- Beware of light fittings in wet conditions
- Do not lift full kegs, use a trolley, or for short distances, roll keg along on bottom rim. Lift using your legs not your back

Slide 23

Slide No	Trainer Notes
23.	Class Activity – Discuss importance of cellar attendant safety • Discuss the importance of these safety guidelines.

Slide

Cellar attendant safety

Safety guidelines for the Cellar Attendant:

- Keep the cellar clean, neat and tidy at all times
- Keep cellar equipment in good repair and take faulty equipment out of service
- Report unsafe equipment or conditions to management
- Employ a service technician to repair equipment

Slide 24

Slide No	Trainer Notes
24.	Class Activity – Discuss importance of cellar attendant safety • Discuss the importance of these safety guidelines.

Slide

Operating dispensing systems

How to operate dispensing systems

How do you operate and maintain:

- Spirit dispensing systems
- Wine dispensing systems
- Post mix dispensing systems

Slide 25

Slide No	Trainer Notes
25.	Class Activity – Discussion This section will explore how to use these systems but is a good introductory discussion to identify current understanding.

Slide

Spirit dispensing systems

Operating spirit dispensing systems

How do you use the following:

- Spirit bottle dispensing units
- Bulk spirit dispensing units
- Spirit guns

Slide 26

Slide No

Trainer Notes

26.

Class Activity – Demonstration

- Trainer to demonstrate how to use these systems.

Slide

Wine dispensing systems

Operating wine dispensing systems

How do you use the following:

- Spirit wine bottle dispensing units
- Bulk wine dispensing units

Slide 27

Slide No	Trainer Notes
27.	Class Activity – Demonstration Trainer to demonstrate how to use these systems.

Slide

Post-mix dispensing systems

Main components of a post mix dispensing system

The main components include:

- Water
- CO₂
- Carbonator
- Syrup
- Dispenser

Slide 28

Slide No

Trainer Notes

28.

Class Activity – Discussion

- What is the purpose of each of these components?

Slide

Post-mix dispensing systems

Types of systems

There are three main systems. These include:

- Countertop electric refrigeration
- Ice cooled system
- Remote Refrigeration Cooling

Slide 29

Slide No	Trainer Notes
29.	Class Activity – Discussion of systems • Trainer to discuss the differences of these systems.

Slide

Post-mix dispensing systems

Using post mix systems

How do you:

- Use a post mix system?
- Handle, store and change CO₂ cylinders?
- Handle and replace box syrup?

Slide 30

Slide No

Trainer Notes

30.

Class Activity – Demonstration

- Trainer to demonstrate how to use post mix systems.

Slide

Post-mix dispensing systems

Cleaning post mix systems

How do you:

- Clean a post mix system on a daily, weekly and monthly basis?
- Clean soda dispensing lines?
- Sanitise soda machines?
- Clean soda dispensing gun?

Slide 31

Slide No	Trainer Notes
31.	Class Activity – Demonstration / Discussion Trainer to demonstrate/discuss how to clean post mix systems.

Slide

Identifying and resolving faults with dispensing systems

Common actions to rectify faults

There are a number of common actions that can be used, regardless of system or machine.

Appropriate action to rectify faults may include:

- Gas system checking, identification and adjustment
- Refrigeration system checking, identification and adjustment
- Housekeeping, cleaning and maintenance
- Stock control, rotation of stock

Slide 32

Slide No	Trainer Notes
32.	Class Activity – Discussion • What are common faults of each dispensing system mentioned? • What are possible remedies?

Slide

Element 2:

Operate and maintain beer reticulation systems

Slide 33

Slide No	Trainer Notes
33.	Introduce topic. Class Activity – General Discussion Ask general questions: • Why are beer systems popular? • What are the benefits of these systems? • What equipment is associated with these systems?

Slide

Operate and maintain beer reticulation systems

Performance Criteria for this Element are:

- Operate and clean beer reticulation systems in accordance with manufacturer's instructions ✓
- Follow safety procedures regarding handling, connecting and storing of gas ✓

Slide 34

Slide No	Trainer Notes
----------	---------------

34.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.
-----	---

Slide

Components of beer dispensing system

Main components of a beer dispensing system

Three main components of a beer dispensing system are:

- Gas
- Beer
- Cooling

Slide 35

Slide No	Trainer Notes
35.	Class Activity – Discussion • What is the purpose of each of these components?

Slide

Components of beer dispensing system

Gas

- Draft systems use CO₂ alone or mixed with nitrogen
- Maintains the correct carbonation in the beer
- Helps to preserve its flavour
- Propels beer from the keg to the faucet

Slide 36

Slide No

Trainer Notes

36.

Class Activity – Discussion / Demonstration

- How do you handle, store, use and change gas cylinders?
- Trainer to demonstrate where appropriate.

Slide

Components of beer dispensing system

Beer

- The main component of beer systems
- How is beer supplied?
- What types of beer use dispensing systems?
- How do you get beer to the customer using systems?

Slide 37

Slide No	Trainer Notes
37.	Class Activity – Discussion / Demonstration • How do you handle, store, use and change gas cylinders? • Trainer to demonstrate where appropriate.

Slide

Components of beer dispensing system

Cooling

The cooling system should hold beer at a constant temperature from keg to glass.

Types of cooling systems:

- Direct-draw system
- Long-draw systems

Slide 38

Slide No

Trainer Notes

38.

Class Activity – Discussion

- What is the difference between these types of cooling systems?

Slide

Beer systems equipment

Beer systems equipment

Beer dispensing systems normally comprise nine key components:

- Refrigeration/Cooling
- Keg
- Coupler
- Beer Line
- Faucet
- Gas Source
- Regulator
- Gas Line
- Tailpieces and Connectors

Slide 39

Slide No	Trainer Notes
39.	Class Activity – Discussion • What is the purpose of each piece of equipment?

Slide

Beer systems equipment

Refrigeration/Cooling

- Consistent and controlled beer dispense requires that the beer travelling from keg to glass be maintained at a temperature of 1.1° to 3.3°C

Kegs

- Kegs enable beer transport and dispense while maintaining its quality and integrity

Slide 40

Slide No	Trainer Notes
40.	Class Activity – Discussion / Demonstration Trainer to discuss and demonstrate each piece of equipment.

Slide

Beer systems equipment

Coupler

- Gas flows in and beer flows out of a keg through the coupler

Line

- Between coupler and faucet, beer travels through beer line selected to fit the needs of the specific draft application

Slide 41

Slide No	Trainer Notes
41.	Class Activity – Discussion / Demonstration Trainer to discuss and demonstrate each piece of equipment?

Slide

Beer systems equipment

Faucet

- Faucets dispense beer to the glass

Gas Source

- Beer systems depend on gas pressure to push beer from the keg to the faucet

Gas Line

- Gas line should be selected to withstand the pressures expected in the draft system

Slide 42

Slide No	Trainer Notes
42.	Class Activity – Discussion / Demonstration Trainer to discuss and demonstrate each piece of equipment.

Slide

Beer systems equipment

Regulator

- A regulator adjusts and controls the flow of gas from any source

Tail Pieces and Connectors

- Tail pieces connect couplers, wall bracket, shanks or any other piece of equipment to vinyl tubing or other types of beer line

Slide 43

Slide No	Trainer Notes
43.	Class Activity – Discussion / Demonstration • Trainer to discuss and demonstrate each piece of equipment.

Slide

Handling kegs

Importance of handling kegs

The correct handling of kegs plays an important role in the ability to serve quality beer.

This includes the need to:

- Chill kegs
- Link kegs in a series

Slide 44

Slide No

Trainer Notes

44.

Class Activity – Discussion

- What is the importance of these handling activities?

Slide

Handling kegs

Cold Storage and Proper Chilling of Kegs before Serving

- Warm kegs cause more problems at the tap than nearly any other issue
- Beer should remain at or slightly below 3.3°C

Slide 45

Slide No	Trainer Notes
45.	Class Activity – Discussion • How do you keep kegs at the optimum temperature?

Slide

Handling kegs

Linking Kegs in Series

- Busy establishments may connect kegs in a series or in a chain to meet peak capacity demands
- Chaining two or three kegs of the same product together allows all of the chained kegs to be emptied before beer stops flowing

Slide 46

Slide No

Trainer Notes

46.

Class Activity – Discussion

- What is the benefit of linking kegs into a series?

Slide

Connecting beer

Steps to connecting beer

The first steps when connecting the draft beer are to:

- Turn on temprites
- Drawing beer through to taps
- Test for quality

Slide 47

Slide No	Trainer Notes
----------	---------------

47.

Class Activity – Discussion / Demonstration

- Show how to connect beer.

Slide

Pouring beer

Pouring draft beer

- Proper serving of draft beer is intended to have a “controlled” release of carbonation to give a better tasting and sensory experience
- The evolution of CO₂ gas during pouring builds the foam head and releases desirable flavours and aromas

Slide 48

Slide No	Trainer Notes
48.	Class Activity – Discussion How should you pour beer?

Slide

Pouring beer

Technique

- Hold glass at 45° angle, open faucet fully
- Gradually tilt glass upright once beer has reached about the halfway point in the glass
- Pour beer straight down into the glass, working the glass to form a one inch collar of foam ("head"). This is for visual appeal as well as carbonation release
- Close faucet quickly to avoid wasteful overflow

Slide 49

Slide No	Trainer Notes
49.	Class Activity – Demonstration • Show how to pour beer.

Slide

Handling glassware

Importance of 'clean' glassware

- Properly designed and appropriately operated, your draft system pours perfect draft beer from its faucets
- But the consumer's experience can still be ruined by improper pouring, glass residue and unsanitary practices

Slide 50

Slide No	Trainer Notes
50.	Class Activity – Discussion / Demonstration • How do you clean glasses? • How should glasses be stored? • What temperatures should glasses be for service?

Slide

Beer system maintenance and cleaning

Cleaning Frequency and Tasks

Every two weeks (14 days)

- Draft lines should be cleaned
- All faucets should be completely disassembled and cleaned
- All keg couplers or tapping devices should be scrubbed clean

Slide 51

Slide No	Trainer Notes
51.	Class Activity – Discussion • Discuss the purpose of these cleaning activities.

Slide

Beer system maintenance and cleaning

Cleaning Frequency and Tasks

Quarterly (every three months)

- Draft lines should be de-stoned
- All FOB-stop devices should be completely disassembled and hand cleaned
- All couplers should be completely disassembled and detailed

Slide 52

Slide No

Trainer Notes

52.

Class Activity – Discussion

- Discuss the purpose of these cleaning activities.

Slide

Beer system maintenance and cleaning

Cleaning Frequency and Tasks

Quarterly (every three months)

- Draft lines should be de-stoned
- All FOB-stop devices should be completely disassembled and hand cleaned
- All couplers should be completely disassembled and detailed

Slide 53

Slide No	Trainer Notes
----------	---------------

53.

Class Activity – Discussion

- Discuss the purpose of these cleaning activities.

Slide

Beer system maintenance and cleaning

Cleaning beer lines

- It is important to clean your machines and system after every batch of beer you use
- If you don't, you can ruin future batches of beer
- Foamy beer can be caused by the build up of bacteria, yeast or mold within a beer line
- Dirty beer lines can affect the quality and taste of beer, so it is important to regularly clean beer lines

Slide 54

Slide No

Trainer Notes

54.

Class Activity – Discussion

- How do you clean beer lines?

Slide

Identifying and rectifying problems with beer dispensing system

Types of common faults and remedies

Slow dispense at tap

- Ensure dispense tap is working properly
- Ensure sparkler is not too tight or blocked
- Ensure lines are clean
- Ensure gas cylinder is not empty

Slide 55

Slide No	Trainer Notes
55.	Class Activity – Discussion • Discuss these steps.

Slide

Identifying and rectifying problems with beer dispensing system

Types of common faults and remedies

No dispense at tap

- Ensure dispense tap is working properly
- Ensure sparkler is not too tight or blocked
- Ensure keg is not empty
- Ensure line primer filled with beer
- Ensure ball is floating
- Ensure coupling head is fitted correctly
- Change the keg

Slide 56

Slide No	Trainer Notes
56.	Class Activity – Discussion • Discuss these steps.

Slide

Identifying and rectifying problems with beer dispensing system

Common checks

- Check the keg first if you notice a problem with the beer as you pour it
- Notice the flow of the beer when you pull on the tap handle
- Check the gauge on your CO₂ tank
- Notice the level of foam pouring out of the tap
- Taste the beer for correct temperature
- Have your draft beer lines cleaned
- Have your keg cooler checked for correct temperature

Slide 57

Slide No	Trainer Notes
57.	Class Activity – Discussion • Discuss these checks.

Slide

Handling, connecting and storing gas

Importance of handling gas correctly

- Gas is a common and essential component of bulk dispensing systems
- It is essential that when handling gas it is done so in a manner that is safe for the operator

Slide 58

Slide No

Trainer Notes

58.

Class Activity – Discussion

- How do you handle, connect and store gas correctly?

Slide

Handling, connecting and storing gas

Knowledge of beverage gas system operations

Any cellar operator must have an understanding and working knowledge of not only the key components of beverage dispensing systems, as identified to date, but also of beverage gas system operations.

- What should a cellar operator know when it comes to 'gas knowledge'?

Slide 59

Slide No	Trainer Notes
59.	Class Activity – Discussion Discuss the question in the slide.

Slide

Handling, connecting and storing gas

Knowledge of beverage gas system operations

- How to handle, store, connect and disconnect beverage gas cylinders
- Inert gas in confined spaces and the potential dangers
- Particular dangers of carbon dioxide and nitrogen
- Required fire protection equipment and other emergency and alarm procedures
- Methods and techniques for undertaking routine checks for leaks

Slide 60

Slide No

Trainer Notes

60.

Class Activity – Discussion

- How can a cellar operator build their knowledge?

Slide

Handling, connecting and storing gas

Gas safety guidelines

- Assess your cellar to identify safety hazards
- Prevent build up of CO₂
- Never tamper with cylinders
- Store cylinders correctly
- Handle cylinders correctly
- Do not overstock gas supplies

Slide 61

Slide No	Trainer Notes
61.	Class Activity – Discussion • Who should perform these tasks? • Why are they important?

Slide

Element 3:

Use and maintain refrigeration systems

Slide 62

Slide No

Trainer Notes

62.

Introduce topic.

Class Activity – General Discussion

Ask general questions:

- What types of refrigeration systems are used in a commercial bar?

Slide

Use and maintain refrigeration systems

Performance Criteria for this Element are:

- Measure refrigerator temperatures accurately and adjust correctly to comply with product requirements ✓
- Clean and maintain refrigerator components ✓
- Set or re-set walk-in alarms to manufacturer's specifications ✓
- Recognise and repair/report basic mechanical faults in accordance with enterprise procedures ✓

Slide 63

Slide No	Trainer Notes
63.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Refrigeration systems

Types of refrigeration systems

- Glycol system or refrigerated beer line system
- Glycol tanks and pumps
- Compressors
- Chiller plates
- Cold rooms

Slide 64

Slide No

Trainer Notes

64.

Class Activity – Discussion

- What is the difference between these systems?

Slide

Refrigeration systems

Types of refrigeration systems

- Cabinets
- Instantaneous coolers
- Portable coolers
- Ice bank or water chilled system
- Temprite or instantaneous cooler system

Slide 65

Slide No	Trainer Notes
65.	Class Activity – Discussion • What is the difference between these systems?

Slide

Refrigeration systems

Commercial bar refrigerators

- Keggers
- Back Bar Refrigerators
- Shallow & Deep Well Bottle Coolers
- Glass Frosters / Chillers
- Merchandise / Display fridges
- Walk in Coolers

Slide 66

Slide No

Trainer Notes

66.

Class Activity – Discussion

- What is the difference between these systems?

Slide

Refrigeration system temperature

Methods to check refrigeration temperatures

There are two ways to check the temperature inside a refrigerator:

- One way checks the air temperature inside the refrigerator
- Another way gives the internal temperature of something in the refrigerator

Slide 67

Slide No	Trainer Notes
67.	Class Activity – Discussion • What is used to test these temperatures? • What is the ideal temperature for refrigerators?

Slide

Refrigeration system temperature

Types of commercial refrigerator thermostats

- Commercial refrigerator thermostats measure and regulate the temperature in large commercial refrigerators
- They do this by opening and closing an electric current that turns the refrigerator's compressor on and off

Slide 68

Slide No

Trainer Notes

68.

Class Activity – Research activity

- Trainer to get audience to research different types of thermostats and related equipment that can be used in commercial bar operations.

Slide

Refrigeration system temperature

Types of commercial refrigerator thermostats

- Air Sensing
- Evaporator Coil Sensing
- Pressure Sensing

Slide 69

Slide No	Trainer Notes
69.	Class Activity – Research activity Trainer to explain difference between these methods to identify fridge temperature.

Slide

Refrigeration system components

Refrigerator components

Refrigerator components may need to be cleaned on a regular basis include:

- Vents
- Coils
- Filters
- Seals
- Catches

Slide 70

Slide No

Trainer Notes

70.

Class Activity – Discussion

- What is the purpose of these components?
- How do you clean and maintain them?

Slide

Refrigeration system systems

Importance of monitoring and control systems

Given the substantial value often associated with bar stock it is not surprising some establishments will have refrigeration monitoring and control systems installed.

- What types of systems are used?
- What do they 'monitor' and 'control'?

Slide 71

Slide No	Trainer Notes
71.	Class Activity – Discussion • Discuss questions in the slide.

Slide

Refrigeration system systems

Purpose of system products

These systems are designed to:

- Protect perishables
- Save energy
- Increase operator safety

Slide 72

Slide No	Trainer Notes
72.	Class Activity – Discussion • What other benefits exist? • How much money can they systems actually save?

Slide

Refrigeration system systems

Types of system products

Products within these systems include:

- Single and multipoint temperature alarms
- Web enabled data logging systems
- Door monitor and alarms
- Panic (entrapment) alarms

Slide 73

Slide No	Trainer Notes
73.	Class Activity – Discussion Types of system products Products within these systems include: • Single and multipoint temperature alarms – this is important as it is vital that temperatures of food and beverage items remain within acceptable temperature ranges • Web enabled data logging systems – records who enters fridges and at what time • Door monitor and alarms – notifies when fridge doors are opened • Panic (entrapment) alarms – commonly found in ‘walk-in’ fridges that notify the appropriate person when someone has been locked into a unit.

Slide

Identify refrigeration system faults

Compressor

The compressor increases or decreases the temperature and pressure of any air vapor entering the refrigeration unit

Common faults:

- Items are not remaining cold
- No 'motor running sound'

Slide 74

Slide No

Trainer Notes

74.

Class Activity – Discussion

- How do you fix these faults?

Slide

Identify refrigeration system faults

Fluctuating Temperature

Possible checks include:

- Operation temperatures
- Subheat and subcooling
- Temperature controls are turned down to a cold setting
- If temperature controls have failed

Slide 75

Slide No	Trainer Notes
75.	Class Activity – Discussion Discuss how to perform these checks.

Slide

Identify refrigeration system faults

Fans

Fans help regulate the temperature of components inside the refrigerator

Possible checks include making sure:

- Fans of the fridge are working
- Fans are clean and free of debris
- Wiring going to the fans is in good working order
- No visible wire damage
- Fans are receiving power

Slide 76

Slide No

Trainer Notes

76.

Class Activity – Discussion

- Discuss how to perform these checks.

Slide

Identify refrigeration system faults

Reporting basic mechanical faults

When mechanical faults have been recognized it is essential that they are reported immediately to the most appropriate person.

- Why is it important that faults are reported immediately?
- Who is the appropriate person?
- What is the best way to communicate faults?
- What information should be given?
- What should you do with equipment that appears to be faulty?

Slide 77

Slide No	Trainer Notes
77.	Class Activity – Discussion • Discuss questions in the slide.

Slide

Element 4: Monitor quality of cellar products

Slide 78

Slide No

Trainer Notes

78.

Introduce topic.

Class Activity – General Discussion

Ask general questions:

- Why is it important to monitor quality of products?
- Which products should be test?

Slide

Monitor quality of cellar products

Performance Criteria for this Element are:

- Test regularly quality of cellar products and identify faults ✓
- Make adjustments within scope of individual responsibility or report faults to the appropriate person or people ✓
- Use bin and keg card systems to assist in monitoring the quality of products and controlling stock ✓
- Keep cellar tidy, clean and free from litter ✓
- Monitor cellar temperature ✓

Slide 79

Slide No	Trainer Notes
79.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Test quality of cellar products

Types of cellar products

- Beers
- Spirits
- Wine
- Post-mix syrups

Slide 80

Slide No

Trainer Notes

80.

Class Activity – Discussion

- How can you test these products?

Slide

Test quality of cellar products

Beer – faults and remedies

- Cloudy beer
- No head on beer
- Beer fobbing in glass

What are remedies for each of these faults?

Slide 81

Slide No	Trainer Notes
81.	Class Activity – Discussion Cloudy beer • Cleaning pipes every week • Ensure key is still within 'best before date' • Flush through lines with water • Connect to a new keg. No head on beer • Ensure staff are trained in pouring • Ensure tap sparkler is in place • Ensure beer tap is being used correctly • Ensure correct glass cleaning techniques are used. Beer fobbing in glass • Ensure beer is poured at correct angle • Ensure beer is at correct temperature.

Slide

Test quality of cellar products

Spirits – faults and remedies

- Strength of spirit
- Strange taste
- Beverage taste soapy

What are remedies for each of these faults?

Slide 82

Slide No	Trainer Notes
82.	Class Activity – Discussion Strength of spirit - At times the amount of spirit being dispensed may be more or less than what is required. Check the equipment. Strange taste - The dispenser may have been used for another bottle of alcohol. It must be cleaned correctly. Beverage taste soapy - It is important to ensure that it is cleaned properly.

Slide

Test quality of cellar products

Wine – faults and remedies

- Cloudy or scaly wine
- Wine smell or taste bad
- Wine is going off quickly

What are remedies for each of these faults?

Slide 83

Slide No	Trainer Notes
83.	Class Activity – Discussion Cloudy or scaly wine - Cloudy or scaly wine is always a symptom of a dirty system and poor maintenance. Incorrect machine use may also contribute to this condition. Wine smell or taste bad - New units may cause some wines to have a slightly different taste or smell. This is normal and will diminish very rapidly. It should disappear completely within 1-3 days. Wine is going off quickly - Wines are expected to last approximately one to three weeks. Therefore if the problem occurs before this time it will vary based on a number of factors being temperature, wine age and wine type, and cleanliness of the machine.

Slide

Test quality of cellar products

Post mix – faults and remedies

- Product is flat
- Product is warm
- Product is flavourless
- Wrong product is being dispensed

What are remedies for each of these faults?

Slide 84

Slide No	Trainer Notes
84.	Class Activity – Discussion Product is flat • Check CO2 levels to ensure carbonation is taking place. Product is warm • Check refrigeration system. Product is flavourless • Ensure they syrup box contains syrup • Ensure syrup is going through lines • Ensure line connections are sealed • Ensure line is connected to syrup box. Wrong product is being dispensed • Ensure lines are connected to correct syrup box.

Slide

Test quality of cellar products

Importance of glassware

Quite often many problems relating to the appearance and taste of finished products are directly related to the condition and cleaning procedures towards glassware and not the equipment itself.

- How can you ensure glasses are 'clean'?

Slide 85

Slide No	Trainer Notes
85.	Class Activity – Discussion • How do you ensure glasses are clean?

Slide

Bin and keg key systems

Importance of bin and keg key systems

Like in any high volume bar establishment, the enormous volumes of alcohol and the value attached to them is a considerable and important asset that must be monitored and controlled to ensure that the beverage items are correctly:

- Identified
- Stored
- Used before expiry dates

Slide 86

Slide No

Trainer Notes

86.

Class Activity – Discussion

- How are these systems used?

Slide

Bin and keg key systems

Aims of bin and keg key systems

The overriding aims of bin or keg key systems are to:

- Easily identify when an item or collective of items were purchased
- To track their usage in an establishment

Slide 87

Slide No	Trainer Notes
87.	Class Activity – Discussion • How can this be achieved?

Slide

Bin and keg key systems

Benefits of bin and keg key systems

- Easier identification of similar bottles, especially those from different vintages
- Easier to track volume of items
- Tracks actual consumption
- Ensures greater control of inventory
- Ensures appropriate stock location

Slide 88

Slide No

Trainer Notes

88.

Class Activity – Discussion

- Discuss these benefits.

Slide

Bin and keg key systems

Benefits of bin and keg key systems

- Identify how long they have been in stock
- Identify when they should be used
- Helps facilitate stocktaking
- Helps enable accurate accounting records which identifies actual cost of goods sold

Slide 89

Slide No	Trainer Notes
89.	Class Activity – Discussion • Discuss these benefits.

Slide

Bin and keg key systems

Keg Key Systems

- Keg key systems are used to identify and record beer kegs
- Given that beer kegs have a limited shelf life, however look the same, there must be a way to identify individual kegs

Slide 90

Slide No

Trainer Notes

90.

Class Activity – Discussion

- How do keg key systems work?

Slide

Bin and keg key systems

Bin Card Systems

- Bin cards are normally associated with individual beverage bottles in storage
- The most common type of beverage which uses a bin system is wine
- Given the endless makes, styles and vintages of wine, there needs to be a system which can easily identify bottles or batches of wine purchases

Slide 91

Slide No	Trainer Notes
91.	Class Activity – Discussion How do bin card systems work?

Slide

Bin and keg key systems

Bin Card Systems

- Quite often a bin system incorporates inventory software and recording systems and the use of 'identification' tags placed around the necks of wine and other beverage bottles or on boxes of product
- This ensures each bottle or box is traceable
- The unique bin number/s on each bottle neck tag / box allows every bottle or box to be found with ease and removed with accuracy

Slide 92

Slide No

Trainer Notes

92.

Class Activity – Discussion

- Discuss the operations of these systems.

Slide

Bin and keg key systems

Benefits of wine tagging systems

- Identify your wine locations
- Place your wines randomly
- Reduce the search area
- Finding select wine
- Maintaining an accurate inventory

Slide 93

Slide No	Trainer Notes
93.	Class Activity – Discussion • Discuss these benefits.

Slide

Keep cellar tidy and clean

Importance of keeping cellar tidy and clean

- As a cellar contains beverages, it essentially must follow the usual hygiene requirements that apply to any food and beverage establishment or outlet
- It is essential that the cellar must fulfil modern health and safety regulations

Slide 94

Slide No	Trainer Notes
94.	Class Activity – Discussion • What health regulations must be followed? • What safety regulations must be followed? • How do you maintain a clean and tidy cellar?

Slide

Keep cellar tidy and clean

Cleaning and maintaining cellar area

- Only keep items that are essential
- Remove used containers, boxes etc on a regular basis
- Store items in a logical manner
- Ensure a clear path to move and transport items
- Cleaning on a regular basis, especially when spills occur
- Keep cellar walls and floors clean

Slide 95

Slide No	Trainer Notes
95.	Class Activity – Discussion • Discuss these steps.

Slide

Keep cellar tidy and clean

Cleaning and maintaining cellar area

- Ensure walls are treated with an anti-fungal paint or cleaner
- Ensuring suitable lighting
- Cleaning drains and sumps on a regular basis
- Ensuring there is hot and cold running water access for cleaning
- Maintain good ventilation to remove stale air and build up of CO₂ gas
- Keep cleaning containers clean

Slide 96

Slide No

Trainer Notes

96.

Class Activity – Discussion

- Discuss these steps.

Slide

Keep cellar tidy and clean

Cleaning and maintaining cellar area

- Store cleaning chemicals and equipment in appropriate and secure location
- Keep water hoses on their reels and secure
- Ensure all gas cylinders are correctly stored
- Use all retaining chains to limit movement of gas cylinders
- Remove empty kegs, casks and bottles on a regular basis
- Reseal casks when empty

Slide 97

Slide No	Trainer Notes
97.	Class Activity – Discussion • Discuss these steps.

Slide

Monitor cellar temperature

- The importance of temperature in all aspects of beverage storing and dispensing is critical in ensuring the finished product is dispensed in its optimal condition
- Different temperatures have different reactions for different beverages

Slide 98

Slide No

Trainer Notes

98.

Class Activity – Discussion

- Why is cellar temperature important?

Slide

Monitor cellar temperature

Optimal cellar temperature

Cellar cooling equipment should give a cellar temperature of 10 to 12 degrees centigrade and run for a maximum of 16 hours out of every 24 hours.

- How do you monitor cellar temperature accurately?

Slide 99

Slide No	Trainer Notes
99.	Class Activity – Discussion • Discuss the question in the slide.

Slide

Monitor cellar temperature

Maintaining cellar cooling equipment

- Ensure any cellar cooling equipment to be working correctly
- Equipment must be regularly serviced by specialised technicians
- Air vents on equipment must be kept clear

Trainer Notes

100.

Class Activity – Discussion

- Discuss these points.

Slide

Monitor cellar temperature

Use and placement of thermometers

- There should be two quality thermometers
- Placed in different parts of the cellar
- Located at different heights to ensure accurate measurements can be taken
- Not be placed in direct flow of cooler air or up against walls

101.	Class Activity – Discussion • Discuss these points.

Slide

Monitor cellar temperature

Importance of cellar temperature for beer

Beer be stored and dispensed from a cool room set at 2 to 10 degrees Celsius.

Where cool rooms are not available, the following points should be adhered to:

- Avoid temperatures above 20 degrees Celsius
- Thorough cleaning of all equipment becomes extremely critical
- It is important to note that keg beer needs approximately 72 hours to adjust to cellar temperatures

103.	Class Activity – Discussion • Discuss the questions in the slide.

Recommended training equipment

Access to bulk dispensing systems relating to:

- Beer – kegs, beer lines, taps etc
- Spirits – bottle and bulk dispensers
- Wine – bottles and bulk dispensers
- Post-mix syrups – including syrups, lines and soda guns
- CO2 cylinders.

Access to refrigeration and cooling systems including:

- Glycol system or refrigerated beer line system
- Glycol tanks and pumps
- Compressors
- Chiller plates
- Cold rooms
- Cabinets
- Instantaneous coolers
- Portable coolers
- Ice bank or water chilled system
- Temprite or instantaneous cooler system.

Access to wine cellar

Beverage menu

Chemicals – various for cleaning cellars and equipment

Cleaning Equipment – various including vacuum cleaner, brooms, mops, brushes, sponges

Computer access to visit cellar equipment websites

Equipment manuals

External supplier information

Thermometers

Gas operating SOP's

Glassware and glassware cleaning equipment

Job descriptions

Layout SOPs for cellar operations

Locations – including access to a bar and cellar

Operational checklists

Refrigerator thermostats

Safety Signs

Standard Operating Procedures (SOP's)

Wine tagging system

Instructions for Trainers for using PowerPoint – Presenter View

Connect your laptop or computer to your projector equipment as per manufacturers' instructions.

In PowerPoint, on the **Slide Show** menu, click **Set up Show**.

Under Multiple monitors, select the Show Presenter View check box.

In the **Display slide show** on list, click the monitor you want the slide show presentation to appear on.

Source: <http://office.microsoft.com>

Note:

In Presenter View:

You see your notes and have full control of the presentation

Your trainees only see the slide projected on to the screen

More Information

You can obtain more information on how to use PowerPoint from the Microsoft Online Help Centre, available at:

<http://office.microsoft.com/training/training.aspx?AssetID=RC011298761033>

Note Regarding Currency of URLs

Please note that where references have been made to URLs in these training resources trainers will need to verify that the resource or document referred to is still current on the internet. Trainers should endeavour, where possible, to source similar alternative examples of material where it is found that either the website or the document in question is no longer available online.
