Competency Based Training (CBT) and assessment an introduction for trainers

Competency

Competency refers to the ability to perform particular tasks and duties to the standard of performance expected in the workplace.

Competency requires the application of specified knowledge, skills and attitudes relevant to effective participation, consistently over time and in the workplace environment.

The essential skills and knowledge are either identified separately or combined.

Knowledge identifies what a person needs to know to perform the work in an informed and effective manner.

Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Attitude describes the founding reasons behind the need for certain knowledge or why skills are performed in a specified manner.

Competency covers all aspects of workplace performance and involves:

- Performing individual tasks
- Managing a range of different tasks
- Responding to contingencies or breakdowns
- Dealing with the responsibilities of the workplace
- Working with others.

Unit of Competency

Like with any training qualification or program, a range of subject topics are identified that focus on the ability in a certain work area, responsibility or function.

Each manual focuses on a specific unit of competency that applies in the hospitality workplace.

In this manual a unit of competency is identified as a 'unit'.

Each unit of competency identifies a discrete workplace requirement and includes:

- Knowledge and skills that underpin competency
- Language, literacy and numeracy
- Occupational safety and health requirements.

Each unit of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Element of Competency

An element of competency describes the essential outcomes within a unit of competency.

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

In this manual elements of competency are identified as an 'element'.

Performance criteria

Performance criteria indicate the standard of performance that is required to demonstrate achievement within an element of competency. The standards reflect identified industry skill needs.

Performance criteria will be made up of certain specified skills, knowledge and attitudes.

Learning

For the purpose of this manual learning incorporates two key activities:

- Training
- Assessment.

Both of these activities will be discussed in detail in this introduction.

Today training and assessment can be delivered in a variety of ways. It may be provided to participants:

- On-the-job – in the workplace
- Off-the-job – at an educational institution or dedicated training environment
- As a combination of these two options.

No longer is it necessary for learners to be absent from the workplace for long periods of time in order to obtain recognised and accredited qualifications.

Learning Approaches

This manual will identify two avenues to facilitate learning:

Competency Based Training (CBT)

This is the strategy of developing a participant's competency.

Educational institutions utilise a range of training strategies to ensure that participants are able to gain the knowledge and skills required for successful:

- Completion of the training program or qualification
- Implementation in the workplace.

The strategies selected should be chosen based on suitability and the learning styles of participants.

Competency Based Assessment (CBA)

This is the strategy of assessing competency of a participant.

Educational institutions utilise a range of assessment strategies to ensure that participants are assessed in a manner that demonstrates validity, fairness, reliability, flexibility and fairness of assessment processes.

Flexibility in Learning

It is important to note that flexibility in training and assessment strategies is required to meet the needs of participants who may have learning difficulties. The strategies used will vary, taking into account the needs of individual participants with learning difficulties. However they will be applied in a manner which does not discriminate against the participant or the participant body as a whole.

Catering for Participant Diversity

Participants have diverse backgrounds, needs and interests. When planning training and assessment activities to cater for individual differences, trainers and assessors should:

- Consider individuals' experiences, learning styles and interests
- Develop questions and activities that are aimed at different levels of ability
- Modify the expectations for some participants
- Provide opportunities for a variety of forms of participation, such as individual, pair and small group activities
- Assess participants based on individual progress and outcomes.

The diversity among participants also provides a good reason for building up a learning community in which participants support each other's learning.

Participant Centred Learning

This involves taking into account structuring training and assessment that:

- *Builds on strengths* – Training environments need to demonstrate the many positive features of local participants (such as the attribution of academic success to effort, and the social nature of achievement motivation) and of their trainers (such as a strong emphasis on subject disciplines and moral responsibility). These strengths and uniqueness of local participants and trainers should be acknowledged and treasured
- *Acknowledges prior knowledge and experience* – The learning activities should be planned with participants' prior knowledge and experience in mind
- *Understands learning objectives* – Each learning activity should have clear learning objectives and participants should be informed of them at the outset. Trainers should also be clear about the purpose of assignments and explain their significance to participants
- *Teaches for understanding* – The pedagogies chosen should aim at enabling participants to act and think flexibly with what they know
- *Teaches for independent learning* – Generic skills and reflection should be nurtured through learning activities in appropriate contexts of the curriculum. Participants should be encouraged to take responsibility for their own learning

- *Enhances motivation* – Learning is most effective when participants are motivated. Various strategies should be used to arouse the interest of participants
- *Makes effective use of resources* – A variety of teaching resources can be employed as tools for learning
- *Maximises engagement* – In conducting learning activities, it is important for the minds of participants to be actively engaged
- *Aligns assessment with learning and teaching* – Feedback and assessment should be an integral part of learning and teaching
- *Caters for learner diversity* – Trainers should be aware that participants have different characteristics and strengths and try to nurture these rather than impose a standard set of expectations.

Active Learning

The goal of nurturing independent learning in participants does not imply that they always have to work in isolation or solely in a classroom. On the contrary, the construction of knowledge in tourism and hospitality studies can often best be carried out in collaboration with others in the field. Sharing experiences, insights and views on issues of common concern, and working together to collect information through conducting investigative studies in the field (active learning) can contribute a lot to their eventual success.

Active learning has an important part to play in fostering a sense of community in the class. First, to operate successfully, a learning community requires an ethos of acceptance and a sense of trust among participants, and between them and their trainers. Trainers can help to foster acceptance and trust through encouragement and personal example, and by allowing participants to take risks as they explore and articulate their views, however immature these may appear to be. Participants also come to realise that their classmates (and their trainers) are partners in learning and solving.

Trainers can also encourage cooperative learning by designing appropriate group learning tasks, which include, for example, collecting background information, conducting small-scale surveys, or producing media presentations on certain issues and themes. Participants need to be reminded that, while they should work towards successful completion of the field tasks, developing positive peer relationships in the process is an important objective of all group work.

Competency Based Training (CBT)

Principle of Competency Based Training

Competency based training is aimed at developing the knowledge, skills and attitudes of participants, through a variety of training tools.

Training Strategies

The aims of this curriculum are to enable participants to:

- Undertake a variety of subject courses that are relevant to industry in the current environment
- Learn current industry skills, information and trends relevant to industry
- Learn through a range of practical and theoretical approaches
- Be able to identify, explore and solve issues in a productive manner

- Be able to become confident, equipped and flexible managers of the future
- Be 'job ready' and a valuable employee in the industry upon graduation of any qualification level.

To ensure participants are able to gain the knowledge and skills required to meet competency in each unit of competency in the qualification, a range of training delivery modes are used.

Types of Training

In choosing learning and teaching strategies, trainers should take into account the practical, complex and multi-disciplinary nature of the subject area, as well as their participant's prior knowledge, learning styles and abilities.

Training outcomes can be attained by utilising one or more delivery methods:

Lecture/Tutorial

This is a common method of training involving transfer of information from the trainer to the participants. It is an effective approach to introduce new concepts or information to the learners and also to build upon the existing knowledge. The listener is expected to reflect on the subject and seek clarifications on the doubts.

Demonstration

Demonstration is a very effective training method that involves a trainer showing a participant how to perform a task or activity. Through a visual demonstration, trainers may also explain reasoning behind certain actions or provide supplementary information to help facilitate understanding.

Group Discussions

Brainstorming in which all the members in a group express their ideas, views and opinions on a given topic, is a free flow and exchange of knowledge among the participants and the trainer. The discussion is carried out by the group on the basis of their own experience, perceptions and values. This will facilitate acquiring new knowledge. When everybody is expected to participate in the group discussion, even the introverted persons will also get stimulated and try to articulate their feelings.

The ideas that emerge in the discussions should be noted down and presentations are to be made by the groups. Sometimes consensus needs to be arrived at on a given topic. Group discussions are to be held under the moderation of a leader guided by the trainer. Group discussion technique triggers thinking process, encourages interactions and enhances communication skills.

Role Play

This is a common and very effective method of bringing into the classroom real life situations, which may not otherwise be possible. Participants are made to enact a particular role so as to give a real feel of the roles they may be called upon to play. This enables participants to understand the behaviour of others as well as their own emotions and feelings. The instructor must brief the role players on what is expected of them. The role player may either be given a ready-made script, which they can memorise and enact, or they may be required to develop their own scripts around a given situation. This technique is extremely useful in understanding creative selling techniques and human relations. It can be entertaining and energising and it helps the reserved and less literate to express their feelings.

Simulation Games

When trainees need to become aware of something that they have not been conscious of, simulations can be a useful mechanism. Simulation games are a method based on "here and now" experience shared by all the participants. The games focus on the participation of the trainees and their willingness to share their ideas with others. A "near real life" situation is created providing an opportunity to which they apply themselves by adopting certain behaviour. They then experience the impact of their behaviour on the situation. It is carried out to generate responses and reactions based on the real feelings of the participants, which are subsequently analysed by the trainer.

While use of simulation games can result in very effective learning, it needs considerable trainer competence to analyse the situations.

Individual /Group Exercises

Exercises are often introduced to find out how much the participant has assimilated. This method involves imparting instructions to participants on a particular subject through use of written exercises. In the group exercises, the entire class is divided into small groups, and members are asked to collaborate to arrive at a consensus or solution to a problem.

Case Study

This is a training method that enables the trainer and the participant to experience a real life situation. It may be on account of events in the past or situations in the present, in which there may be one or more problems to be solved and decisions to be taken. The basic objective of a case study is to help participants diagnose, analyse and/or solve a particular problem and to make them internalise the critical inputs delivered in the training. Questions are generally given at the end of the case study to direct the participants and to stimulate their thinking towards possible solutions. Studies may be presented in written or verbal form.

Field Visit

This involves a carefully planned visit or tour to a place of learning or interest. The idea is to give first-hand knowledge by personal observation of field situations, and to relate theory with practice. The emphasis is on observing, exploring, asking questions and understanding. The trainer should remember to brief the participants about what they should observe and about the customs and norms that need to be respected.

Group Presentation

The participants are asked to work in groups and produce the results and findings of their group work to the members of another sub-group. By this method participants get a good picture of each other's views and perceptions on the topic and they are able to compare them with their own point of view. The pooling and sharing of findings enriches the discussion and learning process.

Practice Sessions

This method is of paramount importance for skills training. Participants are provided with an opportunity to practice in a controlled situation what they have learnt. It could be real life or through a make-believe situation.

Games

This is a group process and includes those methods that involve usually fun-based activity, aimed at conveying feelings and experiences, which are everyday in nature, and applying them within the game being played. A game has set rules and regulations, and may or may not include a competitive element. After the game is played, it is essential that the participants be debriefed and their lessons and experiences consolidated by the trainer.

Research

Trainers may require learners to undertake research activities, including online research, to gather information or further understanding about a specific subject area.

Competency Based Assessment (CBA)

Principle of Competency Based Assessment

Competency based assessment is aimed at compiling a list of evidence that shows that a person is competent in a particular unit of competency.

Competencies are gained through a multitude of ways including:

- Training and development programs
- Formal education
- Life experience
- Apprenticeships
- On-the-job experience
- Self-help programs.

All of these together contribute to job competence in a person. Ultimately, assessors and participants work together, through the 'collection of evidence' in determining overall competence.

This evidence can be collected:

- Using different formats
- Using different people
- Collected over a period of time.

The assessor, who is ideally someone with considerable experience in the area being assessed, reviews the evidence and verifies the person as being competent or not.

Flexibility in Assessment

Whilst allocated assessment tools have been identified for this subject, all attempts are made to determine competency and suitable alternate assessment tools may be used, according to the requirements of the participant.

The assessment needs to be equitable for all participants, taking into account their cultural and linguistic needs.

Competency must be proven regardless of:

- Language
- Delivery Method
- Assessment Method.

Assessment Objectives

The assessment tools used for subjects are designed to determine competency against the 'elements of competency' and their associated 'performance criteria'.

The assessment tools are used to identify sufficient:

- a) Knowledge, including underpinning knowledge
- b) Skills
- c) Attitudes

Assessment tools are activities that trainees are required to undertake to prove participant competency in this subject.

All assessments must be completed satisfactorily for participants to obtain competence in this subject. There are no exceptions to this requirement, however, it is possible that in some cases several assessment items may be combined and assessed together.

Types of Assessment

Allocated Assessment Tools

There are a number of assessment tools that are used to determine competency in this subject:

- Work projects
- Written questions
- Oral questions
- Third Party Report
- Observation Checklist.

Instructions on how assessors should conduct these assessment methods are explained in the Assessment Manuals.

Alternative Assessment Tools

Whilst this subject has identified assessment tools, as indicated above, this does not restrict the assessor from using different assessment methods to measure the competency of a participant.

Evidence is simply proof that the assessor gathers to show participants can actually do what they are required to do.

Whilst there is a distinct requirement for participants to demonstrate competency, there are many and diverse sources of evidence available to the assessor.

Ongoing performance at work, as verified by a supervisor or physical evidence, can count towards assessment. Additionally, the assessor can talk to customers or work colleagues to gather evidence about performance.

A range of assessment methods to assess competency include:

- Practical demonstrations
- Practical demonstrations in simulated work conditions
- Problem solving
- Portfolios of evidence
- Critical incident reports
- Journals
- Oral presentations
- Interviews
- Videos
- Visuals: slides, audio tapes
- Case studies
- Log books
- Projects
- Role plays
- Group projects
- Group discussions
- Examinations.

Recognition of Prior Learning

Recognition of Prior Learning is the process that gives current industry professionals who do not have a formal qualification, the opportunity to benchmark their extensive skills and experience against the standards set out in each unit of competency/subject.

Also known as a Skills Recognition Audit (SRA), this process is a learning and assessment pathway which encompasses:

- Recognition of Current Competencies (RCC)
- Skills auditing
- Gap analysis and training
- Credit transfer.

Assessing competency

As mentioned, assessment is the process of identifying a participant's current knowledge, skills and attitudes sets against all elements of competency within a unit of competency. Traditionally in education, grades or marks were given to participants, dependent on how many questions the participant successfully answered in an assessment tool.

Competency based assessment does not award grades, but simply identifies if the participant has the knowledge, skills and attitudes to undertake the required task to the specified standard.

Therefore, when assessing competency, an assessor has two possible results that can be awarded:

- Pass Competent (PC)
- Not Yet Competent (NYC).

Pass Competent (PC)

If the participant is able to successfully answer or demonstrate what is required, to the expected standards of the performance criteria, they will be deemed as 'Pass Competent' (PC).

The assessor will award a 'Pass Competent' (PC) if they feel the participant has the necessary knowledge, skills and attitudes in all assessment tasks for a unit.

Not Yet Competent' (NYC)

If the participant is unable to answer or demonstrate competency to the desired standard, they will be deemed to be 'Not Yet Competent' (NYC).

This does not mean the participant will need to complete all the assessment tasks again. The focus will be on the specific assessment tasks that were not performed to the expected standards.

The participant may be required to:

- a) Undertake further training or instruction
- b) Undertake the assessment task again until they are deemed to be 'Pass Competent'.

Competency standard

UNIT TITLE: CLEAN PUBLIC AREAS, FACILITIES AND EQUIPMENT		NOMINAL HOURS: 60 hours
UNIT NUMBER: D1.HHK.CL3.02		
UNIT DESCRIPTOR: This unit deals with skills and knowledge required to clean public areas, facilities and equipment, including nominated external areas.		
ELEMENTS AND PERFORMANCE CRITERIA		UNIT VARIABLE AND ASSESSMENT GUIDE
Element 1: Apply leather upholstery cleaning techniques 1.1 Assess <i>leather upholstery</i> to be cleaned 1.2 Select <i>appropriate equipment and chemicals</i> 1.3 Prepare work site 1.4 Clean upholstery 1.5 Tidy work site 1.6 Clean, check and store equipment and chemicals Element 2: Apply fabric upholstery cleaning techniques 2.1 Assess <i>fabric upholstery</i> to be cleaned 2.2 Select appropriate equipment and chemicals 2.3 Prepare work site 2.4 Clean upholstery 2.5 Tidy work site 2.6 Clean, check and store equipment and chemicals		Unit Variables The Unit Variables provide advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. This unit applies to all industry sectors that clean public areas, facilities and equipment within the labour divisions of the hotel and travel industries and may include: - Housekeeping. The cleaning of public areas, facilities and equipment may apply to: - Foyers, corridors, waiting areas and entrance areas - Car parks, footpaths and external walkways - Internal and external entertainment areas - Facilities in public areas, such as tables and chairs, pianos, elevators and escalators, doors and windows - Delivery bays - Swimming pool areas - Garden areas.

Element 3: Apply glass surfaces cleaning techniques 3.1 Assess <i>glass areas</i> to be cleaned 3.2 Select appropriate equipment and chemicals 3.3 Prepare work site 3.4 <i>Clean glass areas</i> 3.5 Tidy work site 3.6 Clean, check and store equipment and chemicals Element 4: Apply ceilings, surfaces and fittings cleaning techniques 4.1 Assess <i>ceilings, surfaces and fittings areas</i> to be cleaned 4.2 Select appropriate equipment and chemicals 4.3 Prepare work site 4.4 <i>Clean ceilings, surfaces and fittings</i> 4.5 Tidy work site 4.6 Clean, check and store equipment and chemicals Element 5: Apply wet area cleaning techniques 5.1 Assess <i>wet areas</i> to be cleaned 5.2 Select appropriate equipment and chemicals 5.3 Prepare work site 5.4 <i>Clean wet areas</i> 5.5 Tidy work site 5.6 Clean, check and store equipment and chemicals	<i>Assess leather upholstery</i> may include: • Determining style, condition and coloration • Identifying type of soil • Selecting the most appropriate cleaning techniques, including conducting spot testing. <i>Appropriate equipment and chemicals</i> will vary between each type of cleaning to be undertaken and will depend on the assessment of the individual job, but may include: • Personal protective equipment and clothing • Specialist leather products/agents and leather cleaning kits • Barrier paper, cleaning screens, cloths and towelling, sponges, drop sheets, chamois • Hoses • Ladders and mechanical devices for high level cleaning • Measuring equipment and dilution/preparation of chemicals in accordance with manufacturer's instructions • Selected tools and hand tools • Mechanical and electrical equipment • Checking safety and operational readiness of items, including adjustment of items to suit intended work • Safety signage • Cleaners and chemicals, including acid, alkaline, neutral and solvent cleaners. <i>Prepare work site</i> may include: • Covering items to protect them • Securing items against movement and damage • Placement of physical barriers and safety signage
--	--

Element 6: Apply pressure washing techniques 6.1 Assess <i>area to be pressure washed</i> 6.2 Select appropriate equipment and chemicals 6.3 Prepare work site 6.4 <i>Clean areas using pressure washer</i> 6.5 Tidy work site 6.6 Clean, check and store equipment and chemicals Element 7: Apply high level cleaning techniques 7.1 Assess <i>high level areas</i> to be cleaned 7.2 Select appropriate equipment and chemicals 7.3 Prepare work site 7.4 <i>Clean high level areas</i> 7.5 Tidy work site 7.6 Clean, check and store equipment and chemicals	• Moving and removing furniture and fittings • Notifying other staff and patrons • Cooperating with others to minimize interruption • Covering equipment, items, etc, with protective material, drop cloths, etc • Identifying and complying with relevant in-house policies, procedures, or other emerging needs. <i>Clean upholstery</i> may include: • Removing soil • Applying topical treatments as required • Using personal protective equipment and clothing as required • Adhering to internal work practices, job breakdown sheets and training • Complying with all legal requirements of the host country • Following manufacturer's instructions in the use of chemicals and equipment. <i>Tidy work site</i> may include: • Disposing of collected soil and waste • Complying with all environmental requirements • Replacing furniture and fittings • Removing signage and barriers. <i>Clean, check and store equipment and chemicals</i> may include: • Cleaning equipment that has been used • Cleaning personal protective equipment and clothing that has been used, as appropriate • Conducting safety checks on equipment
---	--

	• Undertaking basic preventative maintenance and basic repairs on equipment • Storing equipment in accordance with enterprise requirements • Storing chemicals in accordance with legislated requirements and enterprise requirements • Replenishing consumables. <i>Assess fabric upholstery will include:</i> • Identifying type, condition, colour fastness and construction of fabric upholstery • Identifying type of soil • Identifying topical treatment through observation and/or testing • Selecting the most appropriate cleaning techniques, including conducting spot testing. <i>Assess glass areas may include:</i> • Inspecting for faults and defects • Identifying type of soil • Determining type of glass which may include: ▪ Coated glass ▪ Frosted glass ▪ Laminated glass ▪ Ordinary window glass ▪ Textured glass ▪ Treated glass ▪ Tinted glass • Selecting the most appropriate cleaning techniques.
--	---

	<i>Clean glass areas may include:</i> • Fanning • Pre-spraying • Scraping • Spot cleaning • Using a squeegee • Drying • Polishing. <i>Assess ceilings, surfaces and fittings areas may relate to:</i> • Identifying type of ceiling to be cleaned, including flat, suspended or raked; hard or absorbent • Identifying type of surface to be cleaned, such as painted, wood, brick, metal • Identifying fittings to be cleaned, which can include cameras, ceiling fans, lights, smoke detectors, speakers, sprinkler systems, televisions, vents and grilles • Identifying soil type • Selecting the most appropriate cleaning techniques. <i>Clean ceilings, surfaces and fittings may include:</i> • Removing cobwebs • Wet and dry dusting • Vacuuming • Spot cleaning • Wiping • Rinsing.
--	---

	<i>Assess wet areas</i> may include: • Identifying areas to be cleaned using wet cleaning techniques and confirming suitability for this type of cleaning • Identifying soil type • Confirming condition of the area and of equipment in it to be cleaned • Assessing graffiti damage • Selecting the most appropriate cleaning techniques. <i>Clean wet areas</i> may include: • Removing loose dust • Treating heavy soil • Treating graffiti • Mopping • Hosing • Pre-spraying • Scrubbing • Spot cleaning • Wet wiping. <i>Assess area to be pressure washed</i> may include: • Identifying areas to be pressure washed and confirming suitability for this type of cleaning • Identifying soil type • Identifying surface type, including brick, car park, concrete, entertainment seating, external walls, gutters and fascia boards, awnings and facades, painted surfaces, steps and stairwells
--	--

	• Confirming condition of area and/or equipment in it to be cleaned. <i>Clean areas using pressure washer may include:</i> • Detailing and hand washing • Pre-spraying • Pressure water blasting • Rinsing. <i>High level areas</i> refers to any area or item that needs cleaning that is 2 meters or more above ground or floor level <i>Assess high level areas</i> may include: • Identifying areas to be cleaned • Analysing optimum method to reach the required height for safe and effective cleaning • Identifying soil type • Selecting the most appropriate cleaning techniques. <i>Clean high level areas</i> may include: • Pressure washing • Scrubbing • Vacuuming • Glass cleaning • Dusting • Wiping • Spot cleaning.
--	--

Assessment Guide

The following skills and knowledge must be assessed as part of this unit:

- The enterprise's policies and procedures in regard to occupational safety and health
- Principles of duty of care towards patrons and co-workers
- Ability to use a variety of cleaning techniques and cleaning items
- Knowledge of the safe chemical and manual handling skills
- Ability to use negotiation, communication and problem solving skills
- Knowledge of internal reporting and emergency response requirements
- Knowledge of waste handling techniques, including safe disposal of dangerous material, chemicals, bio-waste
- Planning and adaptation skills to enable cleaning activities at the preferred times.

Linkages To Other Units

- Clean and maintain industrial work area and equipment
- Implement occupational safety and health procedures
- Manage and resolve conflict situations.

Critical Aspects of Assessment

Evidence of the following is essential:

- Understanding of safe chemical storing and handling conditions
- Demonstrated ability to undertake a hazard assessment of the job to be done
- Demonstrated ability to calculate correct dilution and usage rates
- Demonstrated ability to assess the item/area to be cleaned
- Demonstrated ability to prepare work areas
- Demonstrated ability to clean nominated soils from nominated upholstery types

- Demonstrated ability to clean nominated soils from nominated glass surfaces
- Demonstrated ability to clean nominated soils from nominated ceilings, surfaces and fittings
- Demonstrated ability to clean nominated soils from nominated wet cleaning areas
- Demonstrated ability to pressure wash nominated soils from nominated surfaces, including the removal of graffiti
- Demonstrated ability to clean nominated soils from nominated high level areas
- Demonstrated ability to tidy work areas after cleaning
- Demonstrated ability to clean, safety and store equipment after use.

Context of Assessment

This unit may be assessed on or off the job

- Assessment should include practical demonstration either in the workplace or through a simulation activity, supported by a range of methods to assess underpinning knowledge
- In all instances, assessment of the job to be done must include a comprehensive hazard assessment
- Assessment must relate to the individual's work area or area of responsibility.

Resource Implications

Training and assessment to include access to a real or simulated workplace; and access to workplace standards, procedures, policies, guidelines, tools and equipment.

Assessment Methods

The following methods may be used to assess competency for this unit:

- Case studies
- Observation of practical candidate performance
- Oral and written questions
- Portfolio evidence

- Problem solving
- Role plays
- Third party reports completed by a supervisor
- Project and assignment work.

Key Competencies in this Unit

Level 1 = competence to undertake tasks effectively

Level 2 = competence to manage tasks

Level 3 = competence to use concepts for evaluating

Key Competencies	Level	Examples
Collecting, organising and analysing information	2	Read instructions and labels, cleaning schedules
Communicating ideas and information	1	Report cleaning issues to others
Planning and organising activities	2	Schedule cleaning and maintenance activities
Working with others and in teams	1	Liaise with other staff to address identified needs and problems; and undertake cleaning activities to support emerging workplace demands
Using mathematical ideas and techniques	2	Calculate dilution rates for chemicals and cleaning agents
Solving problems	1	Identify soil types and surfaces to be cleaned
Using technology	1	Operate cleaning equipment

Notes and PowerPoint slides

CLEAN PUBLIC AREAS, FACILITIES AND EQUIPMENT

D1.HHK.CL3.02

Slide 1

Slide No

Trainer Notes

1.

Trainer welcome trainees to class.

Slide

Subject Elements

This unit comprises an introduction and seven Elements:

- Introduction
- Apply leather upholstery cleaning techniques
- Apply fabric upholstery cleaning techniques
- Apply glass surfaces cleaning techniques.

Slide 2

Slide No	Trainer Notes
2.	Trainer advises this Unit comprises an introduction and seven Elements, as listed on this slide and the next slide explaining the introduction serves to provide detailed information relating to the cleaning of public areas. • Each Element comprises a number of Performance Criteria which will be identified throughout the class and explained in detail • Trainees can obtain more detail from their Trainee Manual • At times the course presents advice and information about various protocols but where their workplace requirements differ to what is presented, the workplace practices and standards, as well as policies and procedures must be observed.

Slide

Subject Elements

This unit comprises an introduction and seven Elements:

- Apply ceilings, surfaces and fittings cleaning techniques
- Apply wet area cleaning techniques
- Apply pressure washing techniques
- Apply high level cleaning techniques.

Slide 3

Slide No	Trainer Notes
3.	Trainer advises this Unit comprises an introduction and seven Elements, as listed on this slide and the previous slide explaining the introduction serves to provide detailed information relating to the cleaning of public areas. • Each Element comprises a number of Performance Criteria which will be identified throughout the class and explained in detail • Trainees can obtain more detail from their Trainee Manual • At times the course presents advice and information about various protocols but where their workplace requirements differ to what is presented, the workplace practices and standards, as well as policies and procedures must be observed.

Assessment

Assessment for this unit may include:

- Oral questions
- Written questions
- Work projects
- Workplace observation of practical skills
- Practical exercises
- Formal report from supervisor.

Slide 4

Slide No	Trainer Notes
4.	Trainer advises that assessment for this Unit may take several forms all of which are aimed at verifying they have achieved competency for the Unit as required. Trainer indicates the methods of assessment that will be applied to them for this Unit.

Slide

Introduction

Slide 5

Slide No	Trainer Notes
5.	Introduce topic. Class Activity – General Discussion Ask general questions: • What is a 'public area'? • Who cleans a 'public area'? • What types of cleaning need to be performed? • What is needed to be able to do this cleaning?

Slide

Introduction

The introduction is to give a detailed understanding regarding all aspects of cleaning public areas, facilities and equipment as it relates to general cleaning.

The elements of competency will describe how to undertake cleaning activities relating to specific types of cleaning.

Slide 6

Slide No	Trainer Notes
6.	Class Activity – Clarification The introduction provides detailed information regarding cleaning. It applies to general cleaning. Hence the introduction is quite extensive. The elements of competency relates to specific types of cleaning. These will be smaller as they discuss separate cleaning activities.

Slide

Introduction

The purpose of the introduction is to provide detailed information relating to:

- Understanding public areas, facilities and equipment
- Types of cleaning equipment
- Preparing the work area
- Using equipment correctly and safely
- Types of cleaning agents and chemicals.

Slide 7

Slide No	Trainer Notes
7.	Class Activity – General Discussion Introduce the points. These will be covered during the introduction.

Slide

Introduction

The purpose of the introduction is to provide detailed information relating to:

- Types of surfaces to be cleaned
- Disposal of garbage and used chemicals
- Cleaning and maintaining PPE
- Cleaning equipment after use
- Storing equipment and chemicals safely.

Slide 8

Slide No	Trainer Notes
8.	Class Activity – General Discussion Introduce the points. These will be covered during the introduction.

Slide

Introduction

One of the basic requirements that a customer of a hospitality business has is that an organisation is clean and tidy.

It must:

- Match and exceeds cleanliness found in a normal household
- Look clean and tidy
- Be aesthetically pleasing
- Be free from dangers that can pose a hygiene or safety risk.

Slide 9

Slide No	Trainer Notes
9.	Class Activity – Discussion • As a customer, what level of cleanliness do you expect at a hotel? • What will you accept and not accept?

Slide

Key definitions

Before we can start to discuss cleaning methods involved, it is important to identify and discuss these three key terms:

- Public areas
- Facilities
- Equipment.

Slide 10

Slide No	Trainer Notes
10.	Class Activity – Discussion • What is included in each of these terms?

Slide

Public areas

A public space is any area within a hospitality organisation that is readily available for all customers to enjoy.

Public areas include:

- Lobby
- Restaurants
- Bars
- Outlet shops.

Slide 11

Slide No	Trainer Notes
11.	Class Activity – Discussion • What is the difference between a 'private' and 'public' area? • What areas are considered 'private' and who can access these? • What makes the locations in this slide 'public' areas? • Discuss the types of cleaning and cleaning expectations to be undertaken in each of these locations.

Slide

Public areas

Public areas include:

- Elevators
- Public toilets
- Corridors
- Gardens
- Swimming pools
- Gymnasiums
- Play areas

Slide 12

Slide No	Trainer Notes
12.	Class Activity – Discussion • What makes the locations in this slide 'public' areas? • Discuss the types of cleaning and cleaning expectations to be undertaken in each of these locations.

Slide

Facilities

Facilities are aspects of products and services within these public areas.

It can include:

- Furniture commonly refers to items in the room that are movable including tables, chairs and sundecks
- Fixtures refer to items that are attached including heaters, air-conditioners and lights
- Fittings refers to taps, pipes and electrical aspects of a public space.

Slide 13

Slide No	Trainer Notes
13.	Class Activity – Discussion • What cleaning activities need to be performed to keep facilities clean?

Slide

Equipment

Equipment is defined as the items within the public area that are used, their by customers or staff.

Examples of equipment can used by staff include:

- Buffet areas
- Kitchen equipment.

Slide 14

Slide No	Trainer Notes
14.	Class Activity – Discussion Think about a city hotel and a resort. In each of these types of establishments: • How many of each would exist? • Where would they be located? • Are they indoors or outdoors? • Are they in public view? • Who is responsible for cleaning them?

Slide

Equipment

Examples of leisure equipment used by customers include:

- Games – board games, ping pong tables
- Sporting goods – golf clubs
- Gym equipment – water tanks, weights, machines
- Pool equipment – inflatable equipment and balls
- Leisure machinery - jet skis, boats
- Playground equipment

Slide 15

Slide No	Trainer Notes
15.	Class Activity – Discussion • What other types of equipment do customers use? • How are they cleaned? • Who cleans them? • When should they be cleaned?

Slide

Types of cleaning equipment

The type of cleaning equipment found in businesses will vary.

Generally, commercial or industrial equipment is better because it is:

- Sturdier
- Larger capacity
- Fitted with larger electric motors.

Slide 16

Slide No	Trainer Notes
16.	Class Activity – Discussion • What types of cleaning equipment exist? • What is their purpose? • Where can you get these from?

Slide

Types of cleaning equipment

Cleaning equipment is commonly divided into two categories:

- Manual Cleaning Equipment
- Electrically Powered Equipment.

Slide 17

Slide No	Trainer Notes
17.	Class Activity – Discussion • What are some examples of each? • What are the benefits of each?

Slide

Manual cleaning equipment

Mops

The three main types of mops are:

- Dusting mops
- Polishing mops
- Washing mops.

Slide 18

Slide No	Trainer Notes
18.	Class Activity – Discussion • Dusting mops – to clean skirting boards and polished surfaces • Polishing mops – for buffing and polishing • Washing mops – to wash floor surfaces or apply sealant to floors that have been stripped and need to be re-sealed.

Slide

Manual cleaning equipment

Brooms and brushes

The most common types of brooms and brushes are:

- Carpet brush
- Scrubbing brush
- Sink brush
- Silk brush
- Toilet brush
- Wall brush
- Soft broom
- Hand brush

Slide 19

Slide No	Trainer Notes
19.	Class Activity – Discussion • What is each type of brush used for?

Slide

Manual cleaning equipment

Personal protective equipment (PPE)

- Overalls, jackets and aprons (material aprons and PVC aprons)
- Thick rubber gloves, PVC gloves, gauntlets
- Cotton glove inserts
- Breathing apparatus
- Waterproof clothing and footwear/rubber boots
- Eye protection, safety glasses
- Enclosed shoes and steel-capped boots

Slide 20

Slide No	Trainer Notes
20.	Class Activity – Discussion • What is each type of PPE used for?

Slide

Manual cleaning equipment

Personal protective equipment (PPE)

- Safety hats, hard hats, headwear and helmets
- Goggles and face masks
- Uniform
- RCD devices.

Slide 21

Slide No	Trainer Notes
21.	Class Activity – Discussion • What is each type of PPE used for?

Slide

Manual cleaning equipment

Personal protective equipment (PPE)

Where staff are required to work outside in the elements, PPE can include:

- Sun hats/broad brimmed hats
- Sun glasses
- Sun protection
- Rain coats
- Warm clothing

Slide 22

Slide No	Trainer Notes
22.	Class Activity – Discussion • What is each type of PPE used for?

Slide

Manual cleaning equipment

Garbage receptacles

Nearly all cleaning tasks will require you to gather and dispose of debris, rubbish and waste.

The 'receptacle' may be:

- A solid item –such as a bin
- A disposable plastic bag – usually heavy-duty
- A bin liner placed inside a garbage receptacle that is built-in to a cleaning trolley

Slide 23

Slide No	Trainer Notes
23.	Class Activity – Discussion • What is each type of garbage receptacles are there? • How often are they cleaned? • Who does this? • Is recycling options available?

Slide

Manual cleaning equipment

Other types of equipment include:

- Cloths and sponges
- Buckets
- Warning signs
- Dust pans

Slide 24

Slide No	Trainer Notes
24.	Class Activity – Discussion • What is each type of equipment used for?

Slide

Electrical cleaning equipment

- Vacuum cleaners
- Carpet shampoo machines
- Floor polishers
- Scrubbing machines
- Floor machines

Slide 25

Slide No	Trainer Notes
25.	Class Activity – Discussion • What is the purpose of each type of electrical equipment listed in this slide? Trainer may get the audience to conduct a research exercise to: • Get a detailed description (also refer to the manual notes) • Identify the benefits • Identify the different types available • Identify where these can be obtained? • How much these cost?

Slide

Equipment complementary items

Toiletries

There are items that need to be replenished in public area rest rooms and include:

- Toilet paper
- Tissues
- Sanitary bags
- Rubbish bags
- Soap
- Hand towels – cloth or paper
- Shampoo and conditioners

Slide 26

Slide No	Trainer Notes
26.	Class Activity – Discussion • Not only is equipment needed in public areas, attendants must also replace essential toiletries as well • Where are these items required?

Slide

Equipment complementary items

Towels

- Beach towels for the pool
- Towels for public showers

Replacement items

- Batteries to replace worn or stolen batteries in remote control units
- Light globes to replace lights

Slide 27

Slide No	Trainer Notes
27.	Class Activity – Discussion How do you control towels in public areas to ensure: • They are not stolen? • They are returned to the allocated collection point?

Slide

Check equipment is clean, ready and safe

Before using any item of cleaning equipment it must be standard practice to check to make sure the item is:

- In a clean condition
- Ready to use with all necessary attachments
- Safe to use.

Refer to manufacturer's instructions

Slide 28

Slide No	Trainer Notes
28.	Class Activity – Discussion & Demonstration • Why is it important to make sure items are clean, ready and safe to use? • Where can you access manufacturer's instructions? Trainer to demonstrate how to check an electrical item using manufacturer's instructions. Trainer may want to show how to access manufacturer's instructions via the internet. (if no paper format is available)

Slide

Check equipment is clean, ready and safe

Importance of checks

Checking is important for a number of reasons:

- To avoid mixing chemicals from equipment to equipment
- To avoid transferring dirt or grime from one surface to another
- To stop transportation of bacteria from one surface to another
- To avoid accident and injury

Slide 29

Slide No	Trainer Notes
29.	Class Activity – Discussion & Demonstration • How can you do these checks?

Slide

Check equipment is clean, ready and safe

What do I need to check?

- Equipment does not have any jagged parts, edges that can cause injury
- Damage to equipment has not affected its operational safety
- Check and clean the exterior of cleaning equipment
- Ensure equipment points in contact with surfaces clean
- Free of leaks, smells or loose attachments
- Items to be used need to sufficient in number

Slide 30

Slide No	Trainer Notes
30.	Class Activity – Discussion & Demonstration • What else would you check? Equipment does not have any jagged parts, edges that can cause injury. Damage to equipment has not affected its operational safety. Check and clean the exterior of cleaning equipment – to enhance presentation and project a positive image for the company when seen by patrons. Cleaning equipment must be clean itself. Ensure mop head looks presentable - customers will be able to see these if you are working in public areas and may infer a lack of cleanliness in other parts of the establishment. Buckets should be free of leaks, not smelly and have secure handles. Check and clear around the rollers on mop buckets to avoid the build up of debris and fibres from the mop. Items to be used need to sufficient in number – you need to have enough cleaning cloths, disposable gloves etc to get the job done.

Slide

Check equipment is clean, ready and safe

What do I need to check?

- Items must be appropriate for task
- Make sure all necessary attachments for equipment are taken with you
- Used strictly in accordance with manufacturer's instructions
- Ensure electrical cord is safe to use
- Ensure battery-operated equipment is fully charged

Slide 31

Slide No	Trainer Notes
31.	Class Activity – Discussion & Demonstration • What else would you check? • Items must be appropriate for task – many instances of damage or injury have resulted from trying to complete a cleaning job without the right tools • Make sure all necessary attachments for vacuum cleaners, polishers and other equipment are taken with you before leaving the cleaning store to enable you to complete the intended task. This saves time and effort • All electrically-powered and battery-powered items must be used strictly in accordance with manufacturer's instructions. If you don't know how to use an item either read the instructions or ask an experienced staff member to show you what to do • A standard check with any piece of electrical equipment is to ensure the electrical cord is safe to use – not frayed or broken and with no wires exposed • Make sure any battery-operated equipment is adequately charged before using it. Low battery power can adversely affect cleaning performance and causes time loss when the job has to be interrupted to remedy the situation.

Slide

Prepare work area

Minimise customer inconvenience

Common sense must be used when scheduling and performing cleaning tasks.

Two things to think about are:

- Timing
- Site availability

Slide 32

Slide No	Trainer Notes
32.	Class Activity – Discussion When is the best time to clean public areas to ensure minimal customer inconvenience?

Slide

Prepare work area

Consider:

- Can the job be completed before the area is needed?
- Are there enough staff to handle the job to get it done on time?
- Have you got the right chemicals and enough of them to allow the job to be started and finished without interruption?
- All the supervisors, clients and users are happy for the intended work to proceed?

Slide 33

Slide No	Trainer Notes
33.	Class Activity – Discussion • What else would you need to consider?

Slide

Prepare work area

Whilst it is good to clean when areas are closed, in hotels this is not always the case

Also there will be times when cleaning must be done while people are in the area

Slide 34

Slide No	Trainer Notes
34.	Class Activity – Discussion • What areas of a hotel never close? • When is immediate cleaning required, regardless of how busy an area is? • How can you clean these areas keeping customer inconvenience to a minimum?

Slide

Prepare work area

Cleaning disruptions for customers

Cleaning duties can disrupt customers:

- As a result of noise caused during the cleaning activities
- Cleaning smells and pollution
- By providing a physical obstruction to them when they are moving about
- Through unwanted interruption to their activities in the room where you are cleaning

Slide 35

Slide No	Trainer Notes
35.	Class Activity – Discussion • What types of cleaning are noisy? What can you do to reduce the noise? • What types of smells and pollution are created? • What can you do when you have to close an area for cleaning (toilet) which customers need to use?

Slide

Prepare work area

Cleaning disruptions for staff and business operations

Cleaning duties can disrupt the work of other staff and the operation of the business:

- By not being completed by the scheduled time
- When cleaning staff and cleaning equipment are present in areas when other staff are delivering service to patrons
- By not accommodating unforeseen operational issues into the sequence in which areas are to be cleaned

Slide 36

Slide No	Trainer Notes
36.	Class Activity – Discussion ● What are some examples in delays in cleaning can cause service to be delayed? By not accommodating unforeseen operational issues into the sequence in which areas are to be cleaned, or into the extent of cleaning to be provided. For example: ● A dining room due to be cleaned at 9:30PM is still full of in-house guests who are dining there, spending well and enjoying themselves. Go ahead and do other cleaning duties now and return at 11:00PM to do the dining room ● A lobby area due for a full clean is found to be teeming with 300 check-in guests who have just arrived with their luggage on several buses. Just do a spot clean, empty the bins and tidy things up. Leave the vacuum cleaning and scheduled cleaning of the drapes until tomorrow.

Slide

Prepare work area

Minimise customer inconvenience

You can further minimise interruption or disruption by:

- Observing 'Do Not Disturb' signs on guest rooms if you are cleaning them
- Keeping noise to a minimum when moving around
- Conversing quietly with other staff and guests. Only converse with patrons when they initiate the discussion
- Keeping trolleys and cleaning equipment out of high traffic areas

Slide 37

Slide No	Trainer Notes
37.	Class Activity – Discussion • What other ways can you keep customer inconvenience to a minimum? • Think back to when you were a customer. What cleaning activities caused an inconvenience? What could be changed?

Slide

Prepare work area

Identify hazards

Before an area can be cleaned it must be assessed and prepared and cleared of any items and hazards.

- What is a hazard?
- What type of hazards exist?
- How can you identify them?

Slide 38

Slide No	Trainer Notes
38.	Class Activity – Observation Trainer to take the audience for a tour around the complex, especially in public areas, to identify types of hazards in the workplace or hospitality environment.

Slide

Prepare work area

Types of hazards

- Spillages of food and liquids or all types
- Breakages of packages, individual items, glass containers
- Wet or slippery surfaces
- Broken or damaged furniture
- Fumes
- Blood, human waste, needles, syringes and surgical dressings

Slide 39

Slide No	Trainer Notes
39.	Class Activity – Discussion • What is the cause of these hazards? • Where are these hazards normally found? • How can they be prevented? • As a cleaner, how can you remove these hazards?

Slide

Prepare work area

Types of hazards

- Used condoms
- Sharp objects including syringes, knives, blades and skewers
- Broken glass – from windows, glassware, mirrors
- Fat and oil
- Hot utensils and surfaces
- Sharp food scraps such as bones and crustacean shells

Slide 40

Slide No	Trainer Notes
40.	Class Activity – Discussion • What is the cause of these hazards? • Where are these hazards normally found? • How can they be prevented? • As a cleaner, how can you remove these hazards?

Slide

Prepare work area

Basic preparation procedures

- Never take chances if you think you may harm or injure yourself, another person or property
- Never start a cleaning job if you are concerned for your personal safety
- immediately stop any cleaning job where you believe a danger exists
- Have all the necessary equipment and materials
- Move items that pose a hazard, that might get damaged during the cleaning process

Slide 41

Slide No	Trainer Notes
41.	Class Activity – Discussion • What activities are involved in each of the basic preparation procedures? When preparing to clean an area the following should be applied where necessary: • Never take chances if you think you may harm or injure yourself, another person or property. Never start a cleaning job if you are concerned for your personal safety. You should also immediately stop any cleaning job where you believe a danger exists • Make sure you have all the necessary equipment and materials before you start to do the job properly and completely. Some jobs such as stripping and re-sealing a floor can't be stopped and started • Move items that pose a hazard, that might get damaged during the cleaning process or get in the way of the cleaning process and slow the job down. Items that may need to be moved or removed may include guest property as well as enterprise assets.

Slide

Prepare work area

Basic preparation procedures

- Move items ensuring they don't become hazards such as tripping hazards, obstructions in their own right somewhere else
- Ensure the security of any items that have been moved. Keep them in-sight, keep them behind locked doors, put them out of temptation's way
- Replace items that have been moved when the job has been completed
- Lock doors where necessary to maintain security
- Turn off alarms when entering an alarmed area

Slide 42

Slide No	Trainer Notes
42.	Class Activity – Discussion • What activities are involved in each of the basic preparation procedures? • Where items have to be moved to allow the cleaning to be done, the items that have to be moved must be removed to a place that doesn't cause them to become hazards such as tripping hazards, obstructions in their own right somewhere else • Ensure the security of any items that have been moved. Keep them in-sight, keep them behind locked doors, put them out of temptation's way • Replace items that have been moved when the job has been completed • Lock doors where necessary to maintain security – if you had to unlock a door at night to enter a bar, a room then you should lock that door again once you are inside. This is not so much to lock yourself in, but to lock potential offenders, thieves, out • Turn off alarms when entering an alarmed area.

Slide

Prepare work area

Preparatory cleaning tasks

- Moving the cleaning equipment and materials into a close position
- Walking over the area and picking up any loose rubbish
- Sweeping the area
- Setting up or assembling equipment
- Mixing or preparing chemicals and cleaning agents
- Deciding where to start the job, the physical direction the work will take and where the job will conclude

Slide 43

Slide No	Trainer Notes
43.	Class Activity – Discussion • What activities are involved in each of the preparatory cleaning tasks? • Moving the cleaning equipment and materials into a position that will enable them to be readily used – close to the job but not interfering with the work that needs to be done • Walking over the area and picking up any loose rubbish – papers, discarded boxes, large items, by hand and putting them into a rubbish receptacle • Sweeping the area – to remove dust. In some cases ‘sweeping’ may be the entire cleaning job that needs to be done but in many cases, sweeping can be seen as a preparatory task for others jobs such as wet mopping, stripping etc • Setting up or assembling any equipment that needs to be put together • Mixing any chemicals or preparing chemicals and cleaning agents that will be needed • Deciding where to start the job, the physical direction the work will take and where the job will conclude. This is often vital with cleaning tasks because you often don’t want to walk over surfaces that have just been mopped, re-sealed and you have to make sure you don’t trap yourself into a corner. Working from the furthest point back to the entry door is a usual work direction.

Slide

Prepare work area

Barricade the work area or place safety warning signs

Signage and barriers serve three purposes:

- They warn people of danger
- They help keep people away from the work area
- They are evidence that the establishment has discharged its duty of care obligation to others

Slide 44

Slide No	Trainer Notes
44.	Class Activity – Discussion • When should cleaning signs be used? • Where should they be placed? Signage and barriers serve three purposes: • They warn people of danger – reducing the risk of injury due to slipping • They help keep people away from the work area – which allows us to work unimpeded and keeps their feet off surfaces that need to dry • They are evidence that the establishment has discharged its duty of care obligation to others.

Slide

Prepare work area

Barricade the work area or place safety warning signs

The following points should be followed with reference to barricades and safety signs:

- 'Slippery When Wet' signs must be used when mopping or working with a slippery surface
- 'Cleaning in Progress' signs
- Use of physical barriers
- Locked doors to deny access
- Other workplace signage

Slide 45

Slide No	Trainer Notes
45.	Class Activity – Discussion • What physical barriers can be used? • What other workplace signage may be required? The following points should be followed with reference to barricades and safety signs: • •'Slippery When Wet' signs must be used when mopping or working with a slippery surface – there must be sufficient of these signs to provide suitable and adequate warning to anyone who may enter the cleaning area from any direction. They must be sufficient to be 'readily visible' • • During cleaning, 'Cleaning in Progress' signs should be posted as a warning to patrons and staff in the same way that Slippery When Wet signs are posted • • Physical barriers and physical restraints (purpose-built safety barriers) may be used to restrict access to a site • • Locked doors are another practical way of denying access to areas and rooms • • Your workplace may have other signage that they require you to erect when cleaning is being done – often the signs that are available will depend on the company from whom they were bought.

Slide

Use equipment safely and correctly

All cleaning equipment should be used correctly, and only used for the purpose for which it was intended.

- Don't use an ordinary vacuum cleaner to soak or clear away liquid
- As soon as a fault has been identified it must be reported
- The right equipment should only be used on the surface it was designed to clean
- Follow manufacturer's instructions

Slide 46

Slide No	Trainer Notes
46.	Class Activity – Discussion • What are some common examples where people do NOT use equipment correctly? • Why do they do this? • How can you ensure staff use equipment correctly? • Don't use an ordinary vacuum cleaner to soak or clear away liquid – you must use one that is classified as a wet vacuum cleaner • As soon as a fault has been identified it must be reported – not only is this a genuine safety concern, but it may also impact on the effectiveness of the item and render it less than totally efficient • The right equipment should only be used on the surface it was designed to clean, in accordance with the manufacturer's instructions – avoid trying to 'make do' with what you've got: if you need a special item to clean a certain item/area then you should obtain what is needed and not 'force' what you have got to do the job • Follow manufacturer's instructions.

Slide

Use equipment safely and correctly

Employer responsibilities

Employer OHS responsibilities may include:

- Providing safety training and clear safety rules
- Encouraging a Workplace OHS Committee
- Maintaining an injury register
- Adhering to all workplace agreements that include reference to OHS matters, issues, protection, training, qualified personnel

Slide 47

Slide No	Trainer Notes
47.	Employer responsibilities Employer OHS responsibilities may include: • Providing safety training and clear safety rules • Encouraging a Workplace OHS Committee – the aim of the committee is to identify areas in the workplace where changes should be made so as to create a safer working environment: this may include upgrading equipment, equipment training and safety matters • Maintaining an injury register - so that accidents are logged for insurance and monitoring purposes • Adhering to all workplace agreements that include reference to OHS matters, issues, protection, training, qualified personnel etc.

Slide

Use equipment safely and correctly

Employee responsibilities

OHS workplace obligations imposed on staff include:

- Working in a way that ensures personal safety, and the safety of others
- Using safety equipment strictly in accordance with the manufacturer's instructions
- Using all personal protective equipment and clothing
- Following all occupational health and safety regulations
- Reporting accidents, injuries or illness
- Reporting any equipment in need of repair

Slide 48

Slide No	Trainer Notes
48.	Employee responsibilities OHS workplace obligations imposed on staff include: • Working in a way that ensures personal safety, and the safety of others including colleagues and customers – this is a legal responsibility to look after your personal welfare and includes the requirement to avoid engaging in activities that can compromise or jeopardise the safety of others including playing around in the workplace • Using safety equipment strictly in accordance with the manufacturer's instructions – which means avoiding taking short-cuts and avoiding the belief that you have found a better way to do things • Using all personal protective equipment and clothing when and where required and in a correct manner – this means using items such as goggles, masks, gloves, guards every time they are required, no exceptions • Following all occupational safety and health regulations in-line with establishment requirements. A fundamental for doing this is to know what these requirements are: if you don't know or aren't told. Ask! • Reporting accidents, injuries or illness to the appropriate person – so that help can be provided where needed or appropriate action taken to prevent an accident from occurring where a hazard has been reported, prevent a repeat event occurring, minimise damage, loss or injury • Reporting any equipment in need of repair.

Slide

Use equipment safely and correctly

Employee responsibilities

Adhering to all workers' compensation laws and regulations including:

- Complying with reporting requirements in relation to the accident
- Participating in Return To Work programs
- Not interfering or getting in the way of a person who is trying to assist another in need

Slide 49

Slide No	Trainer Notes
49.	Class Activity – Discussion • What legal requirements must staff follow? • What organisational responsibilities do staff have in relation to safety in the workplace?

Slide

Use equipment safely and correctly

Safe manual handling practices

Manual handling activities are the main cause of injuries in the workplace including:

- Lifting – of equipment, chemical containers, cartons
- Carrying – items from storage areas to cleaning trolleys, moving items to work areas
- Pulling – boxes and cartons forward in storage areas, moving cleaning equipment
- Pushing – trolleys and cleaning equipment

Slide 50

Slide No	Trainer Notes
50.	Class Activity – Questions and Demonstration • What equipment can help assist with manual handling? • What techniques should be used to correctly handle items? Trainer to demonstrate correct manual handling techniques.

Slide

Use equipment safely and correctly

Safe manual handling practices

Key points to remember when engaged in manual handling activities are:

- Get a risk assessment done on any job you believe poses a threat or hazard
- Push cleaning trolleys and cleaning equipment; don't pull them
- Always stock items in their designated place on the trolley
- Never lift anything on your own that weighs over 16 kg
- Be prepared to ask for help when needed

Slide 51

Slide No	Trainer Notes
51.	Key points to remember when engaged in manual handling activities are: • Get a risk assessment done on any job you believe poses a threat or hazard – involve your Occupational Safety and Health representatives and Committee. (where applicable) • Push cleaning trolleys and cleaning equipment; don't pull it. It is important for you to see where you are going • Always stock items in their designated place on the trolley - it is best to position heavy items on the bottom to prevent the trolley from overturning. If you are not sure where things go – ask! • Never lift anything on your own that weighs over 16 kg – this is a recommendation from OHS authorities. There are no maximum weight restrictions as the current approach to workplace safety is to assess every lifting need on an individual basis and use the most appropriate technique depending on the type of load, how far it has to be moved, the size of the load etc. Chemicals can be delivered in drums of 25 litres and 20 kg • Be prepared to ask for help when needed – this may be a request for help such as to do a 'team lift' or a request for information. You must also be prepared to provide help when required.

Slide

Cleaning agents and chemicals

Safe handling of chemicals

Whenever you are required to deal with chemicals employers are under a legal obligation to provide you with:

- Appropriate and sufficient training and information
- Adequate monitoring and supervision
- Necessary safety equipment and protective clothing

Slide 52

Slide No	Trainer Notes
52.	Class Activity – Questions • What types of chemical training is needed? • Who should provide this training? • What safety equipment is needed when handling chemicals? • What protective equipment is helpful when handling chemicals?

Slide

Cleaning agents and chemicals

Material Safety Data Sheets

- Employers are also required to ensure that all chemicals used in the workplace are accompanied by a Material Safety Data Sheet (MSDS) covering issues including:
- Product classification
- Storage requirements
- Transportation regulations
- Safe handling procedures
- First aid

Slide 53

Slide No	Trainer Notes
53.	Class Activity – Demonstration Trainer to show and explain contents of Material Safety Data Sheets.

Slide

Cleaning agents and chemicals

Selecting and preparing chemicals for use

Chemicals may be delivered in:

- Liquid form – most detergents, cleaners, sanitisers, and disinfectants
- Dry/powder form – some detergents come in this dry/powder form
- Aerosol form – for pesticides and deodorisers
- Paste form – polishes

Slide 54

Slide No	Trainer Notes
54.	Class Activity – Questions & internet research Trainer to get trainees to: • Conduct internet research on major chemical suppliers • Identify types of chemicals they provide • Prepare a list of chemicals and cleaning agents under each of these headings.

Slide

Cleaning agents and chemicals

Dilute properly

- Read the label and use the chemical correctly
- Some chemicals will be used undiluted
- Always measure chemicals, never guess at how much you are using.
- Always follow the manufacturer's instructions

Slide 55

Slide No	Trainer Notes
55.	Class Activity – Questions • Which chemicals are usually diluted? • What is the ratio of chemical to water? • How do you measure ratios?

Slide

Cleaning agents and chemicals

Follow relevant work procedures

Where the employer has specific, written directions that relate to selection, preparation and application of chemicals these must be followed.

They can take the form of:

- Job Instructions
- Checklists
- Job Safety Analysis
- Work Instructions

Slide 56

Slide No	Trainer Notes
56.	Class Activity – Demonstration Trainer to show and explain workplace procedures used in hotels in relation to using chemicals.

Slide

Types of cleaning agents and chemicals

Water

- Used to dilute chemicals
- Loosen and dissolve dirt and grime from surfaces
- Rinse surfaces and cleaning equipment
- Always use clean water

Slide 57

Slide No	Trainer Notes
57.	Class Activity – Questions • What are the benefits of using water as a cleaning agent?

Slide

Types of cleaning agents and chemicals

Soap

- Generally, soap is made from animal fats and caustic soda
- Soap can be an effective cleaning agent for some surfaces, but it can leave an unacceptable and unattractive residue
- In general terms, soap is not used for cleaning equipment and surfaces

Slide 58

Slide No	Trainer Notes
58.	Class Activity – Questions • What are the benefits of using soap as a cleaning agent? • What do you need to do to remove soap from surfaces?

Slide

Types of cleaning agents and chemicals

Polishes

- Polish can come as a paste, liquid or cream form
- Polish protects surfaces and forms a barrier against liquids that may harm the surface
- Spirit-based polishes are generally used for metal surfaces as well as windows and mirrors
- Oil-based polishes are generally used for leather, wood, synthetic flooring, linoleum and tiles

Slide 59

Slide No	Trainer Notes
59.	Class Activity – Questions • What are some polishes you use in your everyday life? • What polishes do you use in the workplace? • What are the benefits of polishes?

Slide

Types of cleaning agents and chemicals

Abrasives

- Abrasive cleaning agents are available in powder, cream or paste forms
- They are used for scouring and cleaning ceramic or enamel surfaces
- An example of such a surface is the toilet bowl or the shower base
- Abrasive cleaners must not be used on surfaces that scratch easily

Slide 60

Slide No	Trainer Notes
60.	Class Activity – Questions • What are some abrasives you use in your everyday life? • What abrasives do you use in the workplace? • What are the benefits of abrasives?

Slide

Types of cleaning agents and chemicals

Detergents

- Detergents are chemical-based and can vary in strength
- Acidic detergents (pH of 1 to 6) should be used for cleaning ceramic surfaces
- Neutral detergents (pH of 7) are useful for general cleaning
- Alkaline detergents (pH of 8 to 14) should be used only for specialist tasks, as they can be corrosive and have the ability to damage a surface

Slide 61

Slide No	Trainer Notes
61.	Class Activity – Questions & Demonstration • What are some abrasives you use in your everyday life? • What abrasives do you use in the workplace? • What are the benefits of abrasives? Trainer to provide examples of each type of detergent as identified in this slide.

Slide

Types of cleaning agents and chemicals

Solvents

- Solvent-based detergents will dissolve heavy grease and oil
- It is most important to realise that not all surfaces can be cleaned with solvent detergents
- Surfaces that have been cleaned with solvents must be rinsed thoroughly to remove any harmful residue

Slide 62

Slide No	Trainer Notes
62.	Class Activity – Questions & Demonstration • What are some solvents you use in your everyday life? • What solvents do you use in the workplace? • What are the benefits of solvents? Trainer to provide examples of solvents explaining their purpose.

Slide

Types of cleaning agents and chemicals

Disinfectants

- Disinfectants are cleaning agents that destroy disease-carrying micro-organisms.
- Disinfectants have a strong scent and so are not suitable for use in a kitchen or any food area
- Disinfectants should be used only in the toilet, bathroom and change areas

Slide 63

Slide No	Trainer Notes
63.	Class Activity – Questions & Demonstration - What are some disinfectants you use in your everyday life? - What disinfectants do you use in the workplace? - What are the benefits of disinfectants? Trainer to provide examples of disinfectants explaining their purpose.

Slide

Types of cleaning agents and chemicals

Deodorisers

- Deodorisers are used to mask or eliminate unpleasant smells
- They are commonly in aerosol form and should be sprayed sparingly to achieve their aim but not dominate or over-power

Slide 64

Slide No	Trainer Notes
64.	Class Activity – Questions & Demonstration - What are some deodorisers you use in your everyday life? - What deodorisers do you use in the workplace? - What are the benefits of deodorisers? Trainer to provide examples of deodorisers explaining their purpose.

Slide

Types of cleaning agents and chemicals

Specialised cleaning agents

Cleaning chemicals have been developed to address specific cleaning tasks.

These 'specialty' products have been developed for:

- A range of floor and carpet cleaning needs
- Windows and glass
- Stainless steel
- Leather
- Aluminum
- Toilets
- Various laundry uses
- Cleaning specific equipment and areas

Slide 65

Slide No	Trainer Notes
65.	Class Activity – Questions & Demonstration • What are some specialised cleaning agents you use in your everyday life? • What specialised cleaning agents do you use in the workplace? • What are the benefits of specialised cleaning agents? Trainer to provide examples of specialised cleaning agents explaining their purpose.

Slide

Types of cleaning agents and chemicals

Environmental issues

As businesses seek to reduce their pollution levels, carbon footprints and overall energy usage, there has been growing concern about the use of chemicals.

- Monitoring the green chemical movement
- Seeking environmentally-friendly chemicals
- Training staff in the correct usage of chemicals
- Securing the chemical store
- Disposing of chemicals in environmentally sensitive ways

Slide 66

Slide No	Trainer Notes
66.	Class Activity – Questions and research • What are other ways a company can be environmentally friendly? The trainer may wish to get the audience to research other environmental trends and make a presentation to the class.

Slide

Types of surface to be cleaned

There are a number of different surfaces that need to be cleaned in public areas.

Common surfaces to be cleaned within a hospitality organisation include, but not limited to:

- Leather upholstery – chairs and couches
- Fabric upholstery – curtains, chairs, couches
- Glass surfaces – mirrors, windows and glass tables
- Ceilings, walls, surfaces and fittings
- Wet areas – floors

Slide 67

Slide No	Trainer Notes
67.	Class Activity – Question and Explanation • What equipment and cleaning agents are used to clean each of these surfaces? The Trainer does not need to go into too much detail. Let the audience know, the specific techniques for cleaning each of these surfaces will be explained in each of the Elements of Competency.

Slide

Disposal of garbage and used chemicals

Garbage must be transported safely to the appropriate garbage location, usually a dump master.

- Near the dump master there may be a number of recycling stations– paper, plastics, cans
- Protective clothing should be worn

Slide 68

Slide No	Trainer Notes
68.	Class Activity – Question • What is the normal procedure for disposing of garbage? • What are common items for recycling and how is this done?

Slide

Disposal of garbage and used chemicals

Disposal of garbage

- Remove all garbage on a daily basis
- Comply with any recycling protocols the business has
- Make sure all rubbish goes into the bins
- Close lids to bins after using them
- Liquid waste will be separated from solid waste
- Wash hands after handling rubbish

Slide 69

Slide No	Trainer Notes
69.	Class Activity – Question • What are types of liquid garbage? • How do you dispose of liquid garbage?

Slide

Disposal of garbage and used chemicals

Disposal of chemicals

When cleaning, handling and disposing of chemicals:

- Always wear PPE
- When spilt, chemicals should be initially soaked up with sand, earth or some kind of designated absorbent material
- Left-over chemicals in undiluted form must never be disposed of down a sink
- Take to designated collection sites
- Or arrange collected by specialists

Slide 70

Slide No	Trainer Notes
70.	Class Activity – Question • What are the procedures for disposing of chemicals in most hospitality businesses?

Slide

Cleaning and check PPE

All equipment and PPE must be cleaned before being stored.

This is to enable it to be ready for immediate use and to reduce the chance of being affected by chemicals.

Standard PPE checks include:

- Checking for rips and tears to gloves and aprons
- Checking for holes and leaks in safety shoes
- Verifying the integrity of safety glasses
- Replacing the filters in respirators

Slide 71

Slide No	Trainer Notes
71.	Class Activity – Question • What happens if PPE equipment is damaged?

Slide

Clean equipment after use

- It is important for all equipment to be cleaned after every use
- This will ensure that dirt and grime from a previous cleaning task is not transferred on to another surface
- Follow manufacturer's instructions

Slide 72

Slide No	Trainer Notes
72.	Class Activity – Questions • What equipment needs to be cleaned? • Who does it? • What are the procedures for cleaning equipment after use?

Slide

Clean equipment after use

How do you clean the following types of equipment?

- Mops
- Dusters
- Brooms and brushes
- Cloths and sponges
- Buckets
- Vacuum cleaners
- Carpet shampoo machines
- Floor machines

Slide 73

Slide No	Trainer Notes
73.	Class Activity – Questions • How do you clean each type of equipment? • What else do you need to do to get it ready for the next shift? Please refer to the Training manual which identifies how to clean each type of equipment.

Slide

Store equipment after use

All cleaning equipment will have an allocated storage area.

Equipment must be returned to this area after use

Cleaning equipment cannot be left 'just anywhere' after it has been used because:

- It may be stolen
- It may be a hazard in terms of an obstruction or a tripping hazard
- Others may need to use it and they will go to where it should be

Slide 74

Slide No	Trainer Notes
74.	Class Activity – Questions • Where is equipment normally stored? • Who has access to this area?

Slide

Store equipment after use

Location for storage

- A property can have several small storerooms throughout the property. Normally this is one per department or one per floor
- Larger electrically-powered equipment may be stored in another location due to size
- These storage areas should all be back-of-house locations and fitted with locks to prevent unauthorised access to equipment
- Make sure the store is locked when you leave it

Slide 75

Slide No	Trainer Notes
75.	Class Activity – Questions • Where is equipment normally stored? • Who has access to this area?

Slide

Store chemicals after use

Guidelines for storing chemicals

- Keep in a storeroom away from other products
- A register should be maintained to record items in accordance with legislated requirements
- The store room for chemicals must be well lit and ventilated
- The room should only be used for storing chemicals
- Heavy containers must be stored on lower shelves to avoid the need for lifting, and to minimise the chance of spills

Slide 76

Slide No	Trainer Notes
76.	Class Activity – Questions • What is the important of each of these guidelines when storing chemicals?

Slide

Store chemicals after use

Guidelines for storing chemicals

- Keep containers well sealed and labeled
- Have MSDS and first aid directions and resources posted in the area
- Keep away from a naked flame or excessive heat
- Product usage charts should be close to the chemicals for easy and clear reference purposes
- Instructions for safe chemical handling must be posted

Slide 77

Slide No	Trainer Notes
77.	Class Activity – Questions • What is the important of each of these guidelines when storing chemicals?

Slide

Store chemicals after use

Guidelines for storing chemicals

- Necessary PPE should be present
- Never store chemicals or cleaning agents in food containers
- Never store chemicals with food
- Do not allow customers to come into contact with chemicals, or entry into the chemicals storage area
- Never mix chemicals together
- Ensure measuring devices for chemicals are not used for any other purpose

Slide 78

Slide No	Trainer Notes
78.	Class Activity – Questions • What is the important of each of these guidelines when storing chemicals?

Slide

Cleaning public areas

Gardens

- Gardens influence the ambiance of the property
- Need to be clean and attractive
- Some properties have gardeners – others use the public area cleaner.

Gardening responsibilities can include:

- Caring for grass and plants
- Keeping the gardens neat and tidy
- Maintaining gardening equipment & machinery
- Maintaining a safe working environment.

Slide 79

Slide No	Trainer Notes
79.	Class Activity – Questions a) Make a list of some of the things a public area cleaner would be expected to do in the gardens. b) Which of these tasks would be better done by a gardener?

Slide

Cleaning public areas

Swimming pools

- The pool is a major attraction for guests
- Pools need to be clean and properly maintained.

Pool cleaning tasks can include:

- Removing leaves, algae and vacuuming
- Keeping water sanitised
- Checking filter and maintaining lighting
- Using and storing pool chemicals correctly
- Keeping the pool environs clean and tidy.

Slide 80

Slide No	Trainer Notes
80.	Class Activity – Questions a) Make a list of some of the things a public area cleaner would be expected to do in the pool area. b) Which of these tasks would be better done by a pool cleaning contractor?

Slide

Cleaning public areas

Car parks and driveways

- The hotel entrance is the first point of contact for guests
- It needs to be clean and properly maintained.

Tasks can include:

- Keeping driveways clear of rubbish and clean
- Keeping car park clean and tidy
- Making sure all equipment is in working order
- Making sure all vehicles are secure.

Slide 81

Slide No	Trainer Notes
81.	Class Activity – Questions Make a list of some of the things a public area cleaner would be expected to do in the car park and driveways areas.

Slide

Cleaning public areas

Fire equipment and smoke detectors

- Fire equipment is often located in public areas
- They need to be checked to see they are operational
- Smoke detectors are often placed in public areas
- They need to be checked once a month.

To test a smoke detector:

- Press the test button and check for beep or ring
- If the detector chirps or beeps off and on then it is time to change the battery
- When checking smoke detectors also check that sprinkler heads are operational and not broken.

Slide 82

Slide No	Trainer Notes
82.	Class Activity – Questions Observe the presence of fire equipment and smoke detectors in the public areas or your workplace or a local hotel. How many did you see?

Slide

Conclusion

Conclusion of Introduction

- In conclusion, this introduction provided detailed information when it comes to general cleaning functions performed by public area cleaners.
- Each of the following sections will detail procedures for different and specific types of cleaning

Slide 79

Slide No	Trainer Notes
83.	Class Activity – Recap The trainer may wish to conduct a recap of the topics covered in this introduction including: • Understanding public areas, facilities and equipment • Types of cleaning equipment • Preparing the work area • Using equipment correctly and safely • Types of cleaning agents and chemicals • Types of surfaces to be cleaned • Disposal of garbage and used chemicals • Cleaning and maintaining PPE • Cleaning equipment after use • Storing equipment and chemicals safely.

Slide

Element 1: Apply leather upholstery cleaning techniques

Slide 80

Slide No	Trainer Notes
84.	Introduce topic. Class Activity – General Discussion Ask general questions: • What leather items are located in public areas? • How do you clean them?

Slide

Apply leather upholstery cleaning techniques

Performance Criteria for this Element are:

- Assess leather upholstery to be cleaned
- Select appropriate equipment and chemicals
- Prepare work site
- Clean upholstery
- Tidy work site
- Clean, check and store equipment and chemicals

Slide 81

Slide No	Trainer Notes
85.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Leather upholstered furniture

Leather is a popular soft and durable material that is commonly used in furniture.

Leather covered furniture is normally used in chairs and booths in restaurants as it:

- Look great
- Can resist most spills
- Is easy to clean

Slide 82

Slide No	Trainer Notes
86.	Class Activity – Questions • How do you keep leather clean?

Slide

Leather upholstered furniture

Preventative maintenance

- As leather is a durable substance, most cleaning to be performed will be as an on-going preventative maintenance
- Should be checked daily
- Should be wiped daily
- Kept out of direct sunlight to prevent drying and cracking the leather

Slide 83

Slide No	Trainer Notes
87.	Class Activity – Questions • What other preventative maintenance can you perform?

Slide

Select equipment & chemicals

Equipment required to clean leather

- Vacuum cleaner
- Bucket
- Soft cloth for cleaning
- Soft bristled toothbrushes
- Soft cloth for buffing or polishing

Slide 84

Slide No	Trainer Notes
88.	Class Activity – Questions • What is each of the equipment items identified used for?

Slide

Select equipment & chemicals

Cleaning agents required to clean leather

Due to the nature of leather, more often that not, strong chemicals are not used.

- Water
- Moisturizing soap
- Rubbing alcohol
- Products recommended by a manufacturer

Slide 85

Slide No	Trainer Notes
89.	Class Activity – Questions • What is each of the cleaning agents identified used for? Leather Protection Cream - is a leather conditioner is used to protect leather that repels stains and protects the surface from wear and tear. It feeds, protects and re-instates the smell into old and new leather items.

Slide

Cleaning leather

Immediate cleaning

- Use a moisturizing soap
- Lather on with a soft cloth
- Wash the item to remove dirt and grime
- Do not over-wet the leather
- Do not rinse after washing
- Buff with a soft cloth
- This allows the moisturizing soap to condition the leather
- Polish as usual

Slide 86

Slide No	Trainer Notes
90.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning leather

Regular cleaning

- Wiping of leather furniture at the end of a shift, or two or three times a week with a soft rag.
- Leather should be dusted or wiped with clean rags two to three times a week. This will help prevent dust and dirt build up, especially in the crevices.
- Don't rub down on your furniture too hard as you may accidentally scratch the surface.
- Vacuum the furniture once a week using the vacuum's soft brush attachment

Slide 87

Slide No	Trainer Notes
91.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning leather

Removing ink from leather

On occasions ink from pens may spill on leather furniture.

- Dip the cotton swab into rubbing alcohol and rub over the ink stain
- Dry the area with a blow dryer
- If you still see the stain after drying, apply a thick coat of non-gel, non-oily cuticle remover
- Leave this on overnight and wipe off with a damp cloth

Slide 88

Slide No	Trainer Notes
92.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning leather

Remove dark stains from light coloured furniture

- Mix one part creme of tartar with one part lemon juice to form a paste
- Rub this paste on the stain, leaving in place for 10 minutes; repeat this step
- Remove with a damp sponge or a damp sponge and moisturizing soap

Slide 89

Slide No	Trainer Notes
93.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Clean area and store equipment

- Ensure furniture is dry enough to sit on
- Return cushions, blankets and other items to furniture
- Place any used cloths in a suitable place for cleaning
- Clean and store vacuum cleaner
- Place all chemicals and other substances used in a storage area out of reach of children

Slide 90

Slide No	Trainer Notes
94.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Element 2:

Apply fabric upholstery cleaning techniques

Slide 91

Slide No	Trainer Notes
95.	Introduce topic. Class Activity – General Discussion Ask general questions: • What fabric items are located in public areas? • How do you clean them?

Slide

Apply fabric upholstery cleaning techniques

Performance Criteria for this Element are:

- Assess fabric upholstery to be cleaned
- Select appropriate equipment and chemicals
- Prepare work site
- Clean fabric
- Tidy work site
- Clean, check and store equipment and chemicals

Slide 92

Slide No	Trainer Notes
96.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Fabric upholstered furniture

Benefits of fabric

Fabric upholstery is used on a large amount of furniture items in hotels as it allows for:

- Greater flexibilities of colour, patterns, designs and textures
- Normally less expensive than leather
- Easy to clean
- Has removable covers, which limits impact on operations, whilst still providing inter-changeable features

Slide 93

Slide No	Trainer Notes
97.	Class Activity – Questions • How do you keep fabric clean?

Slide

Select equipment & chemicals

Equipment required to clean fabric

- Vacuum cleaner
- Bucket
- Cloths for cleaning and washing away detergent
- Drying machines
- Wet furniture signs

Slide 94

Slide No	Trainer Notes
98.	Class Activity – Questions • What is each of the equipment items identified used for?

Slide

Select equipment & chemicals

Cleaning agents required to clean fabric

The cleaning materials used to clean fabric is quite simple and standard:

- Liquid or powder fabric detergent or liquid washing detergent
- Cleaning shampoo
- Stain remover
- Warm water
- Products recommended by a manufacturer

Slide 95

Slide No	Trainer Notes
99.	Class Activity – Questions • What is each of the cleaning agents identified used for?

Slide

Preparing work area

When preparing the work area for cleaning fabric upholstery, considerations include:

- Size of cleaning furniture and
- Location and frequency of use of the furniture.

Firstly, it is best to conduct cleaning:

- When it will have little impact on guests
- When it allows for sufficient time to dry before use

Slide 96

Slide No	Trainer Notes
100.	Class Activity – Question • What activities need to be done when preparing the work area?

Slide

Preparing work area

Preparation tasks include:

- Place a 'wet or caution' sign in a suitable location to ensure customers don't sit on the furniture whilst it is wet
- Remove any items such as newspapers and magazines
- Vacuum the furniture and cushions

Slide 97

Slide No	Trainer Notes
101.	Class Activity – Question • Where should cushions be placed to ensure they don't go missing or get dirty themselves?

Slide

Cleaning fabric

General cleaning

- Remove any loose items from the furniture including cushions
- Loosen dirt with a handheld dusting brush while using a vacuum brush attachment to remove the dust
- Vacuum all surfaces of the furniture: back, sides, arms, skirt and the platform beneath the cushions
- Vacuum both sides of the loose cushions
- Remove any cushions
- If the fabric is removable and inter-changeable, wash separately

Slide 98

Slide No	Trainer Notes
102.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning fabric

General cleaning

- Mix laundry or other suitable detergent with warm water
- Ensure the detergent has dissolved or has been mixed properly
- Select a test area to conduct trial cleaning
- Let the trial clean dry
- If fading, shrinkage or discoloration occurs, you may wish to have it cleaned by experts
- If no problems have been identified in the trial cleaning process, go to the next step

Slide 99

Slide No	Trainer Notes
103.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning fabric

General cleaning

- Select an area on the furniture, dip cloth and rub water and detergent mix on the fabric
- Dirt or any marks will begin to remove from the fabric
- Use a clean cloth and plain water
- Rinse area with a damp cloth to ensure detergent has been removed from the fabric
- If some stains or dirt remains, you may wish to repeat steps the cleaning steps until it is suitably clean
- Allow to dry overnight
- Use a professional air drier if available

Slide 100

Slide No	Trainer Notes
104.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning fabric

Deep cleaning

Deep cleaning your upholstered furniture can be done for a number of reasons:

- Removes deep stains and accumulated dirt
- Helps to keep furniture look like as new as possible
- Ensures furniture is as clean as possible, which helps keeps insects and other animals away
- Deep cleaning is normally done by external experts

Slide 101

Slide No	Trainer Notes
105.	Class Activity – Internet research Trainer to get audience to identify: • Local companies that deep clean fabric upholstery • How much it costs? • Where is it done? (at hotel or at their location)

Slide

Cleaning fabric

Deep cleaning

- Remove any blankets, covers or cushions
- Conduct a thorough vacuum
- Replace the cushions back on the furniture
- Check your furniture's label for cleaning instructions before washing
- Prepare a suitable cleaning agent. This may include a specialised shampoo or stain remover
- Similar to regular cleaning, conduct a trial clean
- Ensure no further stains or other foreseeable problems have arisen

Slide 102

Slide No	Trainer Notes
106.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning fabric

Deep cleaning

- Spot treat any existing stains with a suitable stain remover
- Prepare hot water and add detergent or cleaning shampoo into a large bucket. Ensure that the mixture is well mixed
- Use a rough cloth or brush to clean the upholstery but gently putting part of the cloth into the soapy solution. Do not to soak the fabric
- Use a clean damp cloth to soak up the dirty soap, and rinse with a damp cloth
- Let the furniture dry overnight with an airing fan pointed at the wet furniture to help it dry more quickly

Slide 103

Slide No	Trainer Notes
107.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Tidy work site

Considerations

Once the cleaning has taken place, whether through the process of a regular or deep clean, it is important that the furniture has:

- Time to dry
- Does not attract any dirt or dust during the drying process

Slide 104

Slide No	Trainer Notes
108.	Class Activity – Discuss steps • Why is each of the considerations mentioned important?

Slide

Tidy work site

Steps

If the furniture is to remain in its usual location, please ensure:

- All equipment has been removed
- All cushions, blankets and other items to be placed on the furniture is returned
- The surrounding area is clean and dry

Slide 105

Slide No	Trainer Notes
109.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Clean area and store equipment

- Ensure furniture is dry enough to sit on
- Return cushions, blankets and other items to furniture
- Place any used cloths in a suitable place for cleaning
- Clean and store vacuum cleaner
- Place all chemicals and other substances used in a storage area out of reach of children

Slide 106

Slide No	Trainer Notes
110.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Element 3: Apply glass surfaces cleaning techniques

Slide 107

Slide No	Trainer Notes
111.	Introduce topic. Class Activity – General Discussion Ask general questions: • What glass surfaces are located in public areas? • How do you clean them?

Slide

Apply glass surfaces cleaning techniques

Performance Criteria for this Element are:

- Assess glass surfaces to be cleaned
- Select appropriate equipment and chemicals
- Prepare work site
- Clean glass surfaces
- Tidy work site
- Clean, check and store equipment and chemicals

Slide 108

Slide No	Trainer Notes
112.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Fabric upholstered furniture

Types of glass

Glass is used in many hotels as it is very effective in improving the aesthetics of an area and giving the appearance of more space

Glass is commonly found in:

- Windows
- Mirrors
- Coffee tables
- Showers

Slide 109

Slide No	Trainer Notes
113.	Class Activity – Questions • What different types of glass items are located in a hotel? • How do you keep glass clean?

Slide

Select equipment & chemicals

Equipment required to glass surfaces

- Scrubber
- Squeegee
- Equipment belt or bucket
- Window Cleaning Buckets
- Window Scraper
- Window Cleaning Towels
- Extension Poles
- Ladder

Slide 110

Slide No

Trainer Notes

114.

Class Activity – Questions

- What is each of the equipment items identified used for?

Please refer to the manual for detailed comment relating to each piece of equipment.

Slide

Select equipment & chemicals

Cleaning agents required to clean glass surfaces

The cleaning materials used to clean glass surfaces is quite simple and standard:

- Commercial window cleaning agents
- Homemade window cleaning liquids

Slide 111

Slide No	Trainer Notes
115.	Class Activity – Questions & Internet research • What are common types of commercial window cleaners? • How can you make your own window cleaner? What ingredients are in it? (This may be a good internet research session) • What is each of the cleaning agents identified used for?

Slide

Preparing work area

When preparing to clean, it is vital that the area in which you are going to clean is free from any obstacles that may either get in your way or may get covered in cleaning products or water.

- Remove any items off a glass surface, if you are dealing with a coffee table
- Remove any furniture away from windows and unplug any items (electrical cords for lamps) that may get in the way of your walking or ladder areas
- Remove items from underneath a mirror

Slide 112

Slide No	Trainer Notes
116.	No discussion required.

Slide

Cleaning glass surfaces

Cleaning a window

Scrubbing

- Look carefully at a glass surface before you start to clean
- Look for things like scratches, cracks, chips, hard water spots, paint, stucco, silicone or cement
- If very dirty, give it a pre-wash
- Using your scrubber or a natural sponge, soak the entire window

Slide 113

Slide No	Trainer Notes
117.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning glass surfaces

Cleaning a window

Scrubbing

- Use your squeegee to remove the dirty water
- Rewet the window and begin to scrub
- When scrubbing a window, start with the edges
- Scrub back and forth, up and down along each edge
- Start scrubbing from the top and work your way down to the bottom using small circular motions

Slide 114

Slide No	Trainer Notes
118.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning glass surfaces

Cleaning a window

Scrapping

- Start with the edges
- Scrape from the inside of the window towards the outside edge
- Work all the way around the window with a one to two inch pattern
- After the edges are scraped, start from the top and work your way towards the bottom
- Scrape in a straight pattern of about four to five inches while overlapping each time
- If the window starts to dry out before your finished, wet it again and then continue where you left off

Slide 115

Slide No	Trainer Notes
119.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning glass surfaces

Cleaning a window

Using a squeegee

- The entire window should be wet with soapy water
- Wrap a cleaning towels on your index finger
- Make sure it is completely dry
- Dry all sides and edges
- Take your squeegee in hand

Slide 116

Slide No	Trainer Notes
120.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning glass surfaces

Cleaning a window

Using a squeegee

- Place the rubber blade at the top of the dry right hand edge
- Pull the squeegee all the way over to the opposite side of the window
- Using your towel, wipe the squeegee blade completely free from water
- Repeat the same step to finish the lower half of the window
- Wipe the edges

Slide 117

Slide No	Trainer Notes
121.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning glass surfaces

Cleaning a mirror

- Use a glass cleaning product or combination of white or distilled vinegar and warm water
- Find newspaper to use as your cleaning cloth
- Crumple the newspaper into usable sizes
- Clean the mirror first to remove any heavy dirt or marks
- Use plain water to do the pre-cleaning

Slide 118

Slide No	Trainer Notes
122.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning glass surfaces

Cleaning a mirror

- Use a cloth with a tight weave, which is more soft and non-abrasive
- Dip the newspaper into the vinegar water solution after pre-cleaning is finished
- Rub the newspaper in slow circles across the mirror
- Cover the entire surface of the mirror
- Go over the wet areas with a dry portion newspaper
- This will leave the mirror dry and keep drip marks from drying onto the surface

Slide 119

Slide No	Trainer Notes
123.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning glass surfaces

Cleaning a coffee table

- Take all items off the coffee table including flowers, ashtrays, magazines and newspapers
- Wipe the table with a clean dry cloth to remove any dry substances
- Spray a glass cleaner or water on the top of the table
- Scrub the table with a cloth to remove any hard to get stains
- Clean and dry the table with a dry cloth newspaper

Slide 120

Slide No	Trainer Notes
124.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Tidy work site

Considerations

- Remove all cleaning equipment and products
- Ensure all surfaces are clean and dry. This is especially applies to floors which may become dirty or wet
- Return all furniture to their original spots
- Plug in all electrical appliances
- Return any items to coffee tables
- In the event of windows, return any shades or shutters to their correct position

Slide 121

Slide No	Trainer Notes
125.	Class Activity – Discuss steps • Why is each of the considerations mentioned important?

Slide

Clean area and store equipment

- Please place any used cloths in a suitable place for cleaning
- Place all used newspaper pieces in the rubbish bin
- Please ensure all pieces of equipment has been cleaned out of all detergents, residual dirt and other waste products, then placed back in a suitable location for further use
- Place all chemicals and other substances used in a storage area out of reach of children

Slide 122

Slide No	Trainer Notes
126.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Element 4:

Apply ceiling, surfaces and fittings cleaning techniques

Slide 123

Slide No	Trainer Notes
127.	Introduce topic. Class Activity – General Discussion Ask general questions: • What ceiling, surfaces and fittings are located in public areas? • How do you clean them?

Slide

Apply ceiling, surfaces and fittings cleaning techniques

Performance Criteria for this Element are:

- Assess ceiling, surfaces and fittings surfaces to be cleaned
- Select appropriate equipment and chemicals
- Prepare work site
- Clean ceiling, surfaces and fittings
- Tidy work site
- Clean, check and store equipment and chemicals

Slide 124

Slide No	Trainer Notes
128.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Ceiling, surfaces and fittings

Ceilings and walls

This can include all walls and ceilings:

- Painted
- Wooden
- Wallpaper
- Skirting boards

Slide 125

Slide No	Trainer Notes
129.	Class Activity – Questions • How do you keep ceilings and walls clean?

Slide

Ceiling, surfaces and fittings

Surfaces

- All furniture including fridges, tables, cupboards, ledges, bookshelves and desks
- Lights and lamps
- Decorations and flower vases
- Public bathrooms including vanities, toilets and public showers
- Rubbish bins
- Fixtures refer to items that are attached including heaters, air-conditioners and lights

Slide 126

Slide No	Trainer Notes
130.	Class Activity – Questions • How do you keep each of these surface types clean?

Slide

Ceiling, surfaces and fittings

Fittings

- Fittings refers to taps, pipes and electrical aspects of a public space

Slide 127

Slide No	Trainer Notes
131.	Class Activity – Questions • How do you keep fittings clean?

Slide

Select equipment & chemicals

Equipment required to ceilings, surfaces and fittings

- Mops
- Brooms and brushes
- Cloths and sponges
- Buckets
- Garbage receptacles
- Gloves
- Cleaning warning signs
- Personal protective equipment
- Dust pans
- Vacuum cleaners
- Equipment complimentary items

Slide 128

Slide No	Trainer Notes
132.	Class Activity – Questions • What is each of the equipment items identified used for? Please refer to the manual for detailed comment relating to each piece of equipment.

Slide

Preparing work area

- Conduct work during quiet times
- Consider safety
- Ensure all items are removed from the cleaning area
- Keep all equipment and cleaning products close at hand and out of traffic areas and the reach of customers
- Have all 'cleaning in progress' signs ready and visible to customers
- Allow ample time for drying before customers will be using the area

Slide 129

Slide No	Trainer Notes
133.	Class Activity – Question • Why are these points important?

Slide

Cleaning glass surfaces

Areas to dust and polish

The following areas will need either dusting or polishing:

- Air conditioning vents
- Doors – including top ledge and handles
- Picture frames – facing glass as well as frame
- Mirrors – frame and mirror
- Skirting boards
- Windows – glass and frames

Slide 130

Slide No	Trainer Notes
134.	Class Activity – Questions • Do you need to dust or polish each of these areas differently? • Is there any specific preparation you would need to do in relation to each of these items before they could be dusted or polished?

Slide

Cleaning glass surfaces

Areas to dust and polish

- Window sills
- Walls – check for cobwebs and marks
- Lamps – base, shade and cord
- Telephone – main unit and hand receiver
- Seat furniture – don't forget to remove cushions and check sides, legs, back and underneath
- All furniture – top, sides, legs, and underneath each item

Slide 131

Slide No	Trainer Notes
135.	Class Activity – Questions • Do you need to dust or polish each of these areas differently? • Is there any specific preparation you would need to do in relation to each of these items before they could be dusted or polished?

Slide

Cleaning glass surfaces

Dusting

- The main purpose of dusting is to collect small particles of dust
- Dusting may be done with a duster or a damp lint-free cloth
- Don't use a damp cloth if the moisture could ruin the object being cleaned
- Change the cloth when soiled

Slide 132

Slide No	Trainer Notes
136.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Cleaning glass surfaces

Polishing

The main purpose of polishing is to clean the item and leave a shiny, reflecting finish.

When polishing an item, make sure to:

- Spray the cleaning agent onto the cloth - not onto the surface to be cleaned
- Buff the surface after cleaning to remove any streaks

Slide 133

Slide No	Trainer Notes
137.	Class Activity – Discuss steps and/or demonstration Trainer to discuss steps and/or provide a demonstration.

Slide

Vacuum floors

All carpeted areas should be vacuumed and many non-carpeted areas including wooden floors, tiled bathroom area and linoleum floors may also require vacuuming

Slide 134

Slide No	Trainer Notes
138.	Class Activity – General Discussion • What is the purpose of vacuuming?

Slide

Vacuum floors

Vacuuming tips:

- Try to vacuum the room starting at the furthest corner from the door and work back toward the exit
- Ensure you vacuum around and under all furniture
- Particular attention should be placed on the corners of the room, including the skirting boards
- bend your knees when cleaning under items
- Try to avoid 'bending over' the machine

Slide 135

Slide No	Trainer Notes
139.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Audience members to practice vacuuming.

Slide

Cleaning the vanity area

The vanity area normally includes:

- Bathroom bench
- Basins
- Taps
- Mirror
- Cupboards
- Amenities
- Soap containers

Slide 136

Slide No	Trainer Notes
140.	Class Activity – General Discussion • What amenities are normally supplied in the vanity area? • What are appropriate amenities for men? • What are appropriate amenities for women?

Slide

Cleaning the vanity area

1. Clean and dry shelves
2. Scrub hand basin, rinse, then dry and polish with clean cloth – check plughole
3. Polish fittings and taps
4. Clean and dry wall tiles
5. Clean, dry and polish bench top

Slide 137

Slide No	Trainer Notes
141.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Members of audience to practice cleaning a vanity area.

Slide

Cleaning the vanity area

6. Clean and polish mirror
7. Check under vanity for cleanliness
8. Replenish stock – soap, tissues, facial items, shower caps
9. Replenish towels – cloth or paper
10. Conduct final check

Slide 138

Slide No	Trainer Notes
142.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Members of audience to practice cleaning a vanity area.

Slide

Cleaning the shower

1. Wet shower basin and sides
2. Clean tiles and floor – check plughole for foreign matter
3. Clean shower curtain – check pole is clean and all hooks are in place and working
4. Rinse walls and floor thoroughly
5. Polish fittings
6. Replenish supplies
7. Conduct final inspection – leave shower curtain neat and to one side

Slide 139

Slide No	Trainer Notes
143.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Audience members to practice cleaning a shower.

Slide

Cleaning the toilet

1. Flush toilet to wet sides of bowl
2. Pour in cleanser – leave to soak: continue with other work
3. Wash lid and dry – both sides and near back hinges
4. Wash seat and dry – both sides and near back hinges
5. Wash outsides of the bowl and dry

Slide 140

Slide No	Trainer Notes
144.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Audience members to practice cleaning a toilet.

Slide

Cleaning bins

Waste bins should be properly cleaned by:

- Tying the bin liner around the rubbish or emptying the bin directly into your waste bag on the trolley. Remove larger and non-dangerous by hand to facilitate this process where applicable
- Spraying bin with appropriate multi-purpose cleaner, inside and out
- Cleaning with the appropriate cloth
- Fitting a new bin liner

Slide 141

Slide No	Trainer Notes
145.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Audience members to practice cleaning a bin.

Slide

Clean area and store equipment

Steps

- Please place any used cloths in a suitable place for cleaning
- Place all used newspaper pieces in the rubbish bin
- Ensure any rubbish taken from rubbish bins are placed in the external rubbish areas with recycling functions conducted in line with company policy.

Slide 142

Slide No	Trainer Notes
146.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Clean area and store equipment

Steps

- Please ensure all pieces of equipment has been cleaned out of all detergents, residual dirt and other waste products, then placed back in a suitable location for further use
- Place all chemicals and other substances used in a storage area out of reach of children

Slide 143

Slide No	Trainer Notes
147.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Element 5: Apply wet area cleaning techniques

Slide 144

Slide No	Trainer Notes
148.	Introduce topic. Class Activity – General Discussion Ask general questions: • What is wet cleaning? • What does it involve?

Slide

Apply wet area cleaning techniques

Performance Criteria for this Element are:

- Assess wet areas to be cleaned
- Select appropriate equipment and chemicals
- Prepare work site
- Clean wet areas
- Tidy work site
- Clean, check and store equipment and chemicals

Slide 145

Slide No	Trainer Notes
149.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Wet area cleaning

What is 'wet area' cleaning?

There are many public areas in a hotel that contain wet areas.

These are floor areas that can be classified as areas that either:

- Commonly have wet surfaces
- Requires water to clean them

Slide 146

Slide No	Trainer Notes
150.	Class Activity – Questions • How areas have wet surfaces and how do you clean them? • What areas require water to clean them?

Slide

Wet area cleaning

The types of surfaces that are usually wet or require water to clean them include:

- Wood
- Carpet
- Marble
- Rubber
- Tiles
- Concrete
- Vinyl

Slide 147

Slide No	Trainer Notes
151.	Class Activity – Questions • What is the best way to clean these types of surfaces?

Slide

Wet area cleaning

Some points to keep in mind:

- When should it be cleaned routinely?
- When is an 'immediate clean required'?
- When is the most appropriate time to clean it to keep customer disruption to a minimum?
- What do I need to clean it?
- How do I clean it?

Slide 148

Slide No	Trainer Notes
152.	Class Activity – Questions Discuss the questions in the slide.

Slide

Select equipment & chemicals

Equipment required to conduct wet area cleaning

- Mops
- Brooms and brushes
- Cloths and sponges
- Buckets
- Carpet shampoo machines
- Polishers
- Scrubbing machines
- Floor machines

Slide 149

Slide No	Trainer Notes
153.	Class Activity – Questions • What is each of the equipment items identified used for? Please refer to the manual for detailed comment relating to each piece of equipment.

Slide

Preparing work area

- When preparing to clean a floor using a wet method is to ensure the floor area to be cleaned is free from any furniture or other objects
- This may involve stacking tables and chairs to a side, or placing chairs on a table so the floor area is clear
- Normally this type of cleaning is done at night when there are less customers in the public areas such as the lobby or when specific outlets are closed, such as the pool area, gymnasium and restaurants

Slide 150

Slide No	Trainer Notes
154.	Class Activity – Question • Why are these points important?

Slide

Cleaning wet areas

Mopping

1. Remove everything that may be on the floor such as mats, trash cans, and small pieces of furniture
2. Sweep the floor to remove dirt, hair, dust, and other debris
3. Dissolve detergent into warm water using the manufacturer's instructions for the correct water to detergent ratio
4. Pour the solution over the entire floor so that the solution can fill into the grout lines
5. Allow the solution to remain on the floor for 15 to 20 minutes
6. Scrub the grout with a small medium-bristled brush

Slide 151

Slide No	Trainer Notes
155.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Audience members to practice mopping.

Slide

Cleaning wet areas

7. Rinse the floor with a mop dampened with clean water
8. Mix a second batch of detergent and water
9. Mop the entire floor with the fresh solution
10. Rinse the mop with clean water and mop a second time over the floor to rinse it
11. Use a squeegee to push residual moisture to one area of the floor before absorbing it with dry towels

Slide 152

Slide No	Trainer Notes
156.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Audience members to practice mopping.

Slide

Tidy work area

- At the completion of cleaning it is important to ensure the public area is left in a clean and tidy state
- More importantly, the surfaces must be dry or safe for customers to use
- If it absolutely essential that customers must use an area which contains a wet surface, adequate warning signs and barriers should be put into place
- Once the follow is dry, all equipment and furniture should be returned to their original location and all 'wet floor' caution signs removed

Slide 153

Slide No	Trainer Notes
157.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Clean area and store equipment

Steps

- Please place any used cloths in a suitable place for cleaning
- Please ensure all pieces of equipment has been cleaned out of all detergents, residual dirt and other waste products, then placed back in a suitable location for further use
- Place all chemicals and other substances used in a storage area out of reach of children

Slide 154

Slide No	Trainer Notes
158.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Element 6:

Apply pressure washing techniques

Slide 155

Slide No	Trainer Notes
159.	Introduce topic. Class Activity – General Discussion Ask general questions: • What is pressure washing? • What does it involve?

Slide

Apply wet area cleaning techniques

Performance Criteria for this Element are:

- Assess areas to be pressure washed
- Select appropriate equipment and chemicals
- Prepare work site
- Clean areas using pressure washer
- Tidy work site
- Clean, check and store equipment and chemicals

Slide 156

Slide No**Trainer Notes**

160.

Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

Wet area cleaning

What is pressure washing?

Pressure washing has become a popular cleaning method as it is a:

- Quick process
- Effective method
- Relies on a machine to do the hard work of dirt removal, rather than the exertion of manual labour.

With public areas closed for small periods of time, or not at all, in many hotel outlets, cleaning methods that are quick, effective and simple will always be a preferred option

Slide 157

Slide No	Trainer Notes
161.	Class Activity – Questions • What types of equipment can you use to pressure wash?

Slide

Select equipment

Machine

There are many types of equipment.

Nozzles & tips

Most pressure cleaning machines will come with interchangeable spray tips that serve two purposes:

- To lower the pressure and draw the detergent
- Deliver a high pressure rinse at the different spray angles

Slide 158

Slide No	Trainer Notes
162.	Class Activity – Research activity Trainer to get the audience to conduct research into: • Different types of machines used to pressure wash • Costs • Benefits and purpose.

Slide

Select cleaning agents

In essence a pressure cleaning machine will use:

- A mixture of detergent and water to clean
- Water only to rinse

Some other products used include:

- Film removers
- Degreasers

Slide 159

Slide No	Trainer Notes
163.	• Film removers – used for removing layers of dirt and grime using a light pressure clean. This includes the cleaning of cars, paths, roads (main driveway) and outdoor areas • Degreasers - used for removing heavy greaser and industrial cleaning.

Slide

Preparing work area

- When preparing work area using pressure cleaning the main thing to consider is what you are going to clean
- Care needs to be taken when pressure cleaning around windows, flowers and garden vegetation, vents, eaves or light fixtures
- Check for any holes, dents and scratches on the frame of the window that can allow water to come inside a window or property
- Close doors and turn off electronic automatic doors

Slide 160

Slide No	Trainer Notes
164.	Class Activity – Question • Why are these points important?

Slide

Pressure cleaning steps

Cleaning steps using a pressure washing machine include:

- Place any safety equipment on including closed shoes, waterproof clothing and safety glasses
- Connect the machine to a water source
- Attach the nozzle or tip and ensure it is correctly attached
- Start the machine
- Test the power of the pressure washer
- Start spraying few feet away from any object

Slide 161

Slide No	Trainer Notes
165.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Audience members to practice pressure cleaning.

Slide

Pressure cleaning steps

- Slowly bring your wand to 3-4 feet distance from the surface you want to clean
- Move your wand side-to-side a couple of times and check if the surface is clean
- If additional cleaning is needed, move your wand gradually closer to the surface
- Start to clean using a side to side motion
- Keep the nozzle low and start closer to the body and then move the cleaning action further away until you find the right blend of pressure to clean and accuracy
- When washing walls start from the bottom and move up

Slide 162

Slide No	Trainer Notes
166.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Audience members to practice pressure cleaning.

Slide

Pressure cleaning steps

- If you are to clean windows, clean from the side
- Do not apply a direct 'face-on' contact. Check to ensure that water is not leaking inside
- When cleaning the ground, start at lower areas and work your up
- You may need to scrub areas that a pressure cleaner cannot remove stains
- Let the cleaning solution do its work for 20 minutes. This allows for the detergent to start dissolving the dirt, but do not let it sit too long so that it dries out
- When ready to rinse start at the top and work towards the bottom until entire area is detergent free

Slide 163

Slide No	Trainer Notes
167.	Class Activity – General Discussion & Demonstration Trainer to demonstrate and explain why steps are done as identified in the slide. Audience members to practice pressure cleaning.

Slide

Tidy work area

- At the completion of cleaning it is important to ensure the public area is left in a clean and tidy state
- More importantly, the surfaces must be dry or safe for customers to use
- If it absolutely essential that customers must use an area which contains a wet surface, adequate warning signs and barriers should be put into place
- Once the follow is dry, all equipment and furniture should be returned to their original location and all 'wet floor' caution signs removed

Slide 164

Slide No	Trainer Notes
168.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Clean area and store equipment

Steps

- Please ensure all pieces of equipment has been cleaned out of all detergents, residual dirt and other waste products, then placed back in a suitable location for further use
- Place all chemicals and other substances used in a storage area out of reach of children

Slide 165

Slide No	Trainer Notes
169.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Element 7: Apply high level cleaning techniques

Slide 166

Slide No	Trainer Notes
170.	Introduce topic. Class Activity – General Discussion Ask general questions: • What is high level cleaning? • What does it involve?

Slide

Apply wet area cleaning techniques

Performance Criteria for this Element are:

- Assess high level areas to be cleaned
- Select appropriate equipment and chemicals
- Prepare work site
- Clean high level areas
- Tidy work site
- Clean, check and store equipment and chemicals

Slide 167

Slide No	Trainer Notes
171.	Trainer identifies the Performance Criteria for this Element, as listed on the slide.

Slide

High level cleaning

What is high level cleaning?

- As the title suggest high level cleaning is cleaning of items which are 'at a high level' above the ground
- High level cleaning is more difficult that other types of cleaning identified to date and in most cases requires the use of specialised staff to perform these cleaning duties

Slide 168

Slide No	Trainer Notes
172.	Class Activity – Questions What types of equipment can you use to undertake high level cleaning?

Slide

High level cleaning

Types of high level cleaning

- High level lights and chandeliers
- High ceilings and ceiling beams
- High exhaust extraction fans in kitchens
- Cleaning external windows on high rise hotels
- Skylights
- Sculptures
- Foyer glass
- Signs and banners

Slide 169

Slide No	Trainer Notes
173.	Class Activity – Questions • How would you clean each of these items?

Slide

Select equipment

If the job is to be performed by a staff member, common equipment includes:

- Ladders
- Safety ropes
- Extension poles
- High pressure cleaning equipment
- Cranes – this normally requires specialised staff to operate

Slide 170

Slide No	Trainer Notes
174.	Class Activity – Research activity • What is each type of equipment used for? • What other equipment could you use to perform high level cleaning?

Slide

Preparing work area

- The most important aspect is ensuring that equipment used to raise you to a certain height is safe, grounded and placed on a secure and level ground
- You need to prepare any equipment and cleaning materials in a manner that allows for each access when you are 'at height'

Slide 171

Slide No	Trainer Notes
175.	Class Activity – Question • Why are these points important?

Slide

Preparing work area

- This may require the use of a cleaning tool belt containing adequate cloths and cleaning agents
- You may also need to rope off the area so that customers and staff do not wander into the space and either come in contact with ladders or have items fall on them

Slide 172

Slide No	Trainer Notes
176.	Class Activity – Question • Why are these points important?

Slide

Preparing work area

It is also wise to have another person with you to:

- Support the ladder
- Pass items up and down
- Pass comment
- Direct passers-by

Slide 173

Slide No	Trainer Notes
177.	Class Activity – Question • Why are these points important?

Slide

Preparing work area

When cleaning at height, it is natural that any dirty items will fall down.

Think about the furniture directly under where cleaning will take place and make necessary arrangements including:

- Removing the item
- Covering the item with sheets or other protective materials

Slide 174

Slide No	Trainer Notes
178.	Class Activity – Question • Why are these points important? • What can you cover items with?

Slide

High level cleaning

High level cleaning uses a combination of cleaning methods already identified in this power point presentation.

Use of specialists

In most cases high level cleaning will be conducted through the use of professionals.

- What specialists are there?
- What types of services do they provide?

Slide 175

Slide No	Trainer Notes
179.	Class Activity – Research activity Trainer to get audience to conduct research activity to answer the questions in the slide.

Slide

Tidy work area

You may be required to:

- Remove to coverings you have placed on furniture
- Conduct a vacuum, sweep or mop of the area
- Ensure the floor is dry
- Once the follow is dry, all equipment and furniture should be returned to their original location and all 'wet floor' caution signs removed

Slide 176

Slide No	Trainer Notes
180.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

Clean area and store equipment

Steps

- Please ensure all pieces of equipment has been cleaned out of all detergents, residual dirt and other waste products, then placed back in a suitable location for further use
- Place all chemicals and other substances used in a storage area out of reach of children

Slide 177

Slide No	Trainer Notes
181.	Class Activity – Discuss steps • Why is each of the steps mentioned important?

Slide

**Finish:
Thank you!**

Slide 178

Slide No

Trainer Notes

182.

This is the conclusion of the subject.

Trainer thanks the class and delivers assessments as required.

Recommended training equipment

Chemicals – various for cleaning

Communication documents used in workplace

Computer with internet and email access

Emergency procedures

Equipment – various including vacuum cleaner, brooms, mops, brushes, sponges

Equipment manuals and manufacturer's instructions for cleaning

Examples of leather and fabric furniture coverings

Housekeeping trolley

Job descriptions

Manual handling techniques

Note pads and pens

Organisational Chart

Personal Protection Equipment

Policies and procedures for organisation, housekeeping and public area position

Posters

Rubbish removal procedures

Safety Signs

Standard Operating Procedures (SOP's)

Schedules of cleaning activities

Telephone system.

Instructions for Trainers for using PowerPoint – Presenter View

Connect your laptop or computer to your projector equipment as per manufacturers' instructions.

In PowerPoint, on the **Slide Show** menu, click **Set up Show**.

Under Multiple monitors, select the Show Presenter View check box.

In the **Display slide show** on list, click the monitor you want the slide show presentation to appear on.

Source: <http://office.microsoft.com>

Note:

In Presenter View:

You see your notes and have full control of the presentation

Your trainees only see the slide projected on to the screen

More Information

You can obtain more information on how to use PowerPoint from the Microsoft Online Help Centre, available at:

<http://office.microsoft.com/training/training.aspx?AssetID=RC011298761033>

Note Regarding Currency of URLs

Please note that where references have been made to URLs in these training resources trainers will need to verify that the resource or document referred to is still current on the internet. Trainers should endeavour, where possible, to source similar alternative examples of material where it is found that either the website or the document in question is no longer available online.
